# D. M. FERRY & CO'S SEED ANNUAL **=1910**

#### THOROUGHBRED SEEDS

THE last half century has been an era of unprecedented development in the breeding of our domestic animals. No one would think of raising horses or stock of any kind without having at least one parent an animal of better than ordinary blood. By this means the quality of "grades" or animals of mixed parentage has been slowly but surely raised to successively higher levels until the general average is much above that of half a century ago. The achievements with grades, however, are far surpassed by the degree of excellence attained in purebred animals of all kinds. For example, it not infrequently happens that the profit in milk or butter-fat from a purebred cow is four or five times as great as from one of uncertain ancestry. The product from well bred pigs, steers, poultry or what not, is sometimes relatively equally high. It may be that ultimately all stock will be thoroughbred for the reason that no one will be able to afford anything else.

Now any fundamental natural law that applies to animals applies equally to plants. It takes many generations to produce purebred flowers and vegetables, many years of painstaking selection of the best, many sacrifices of present gain in discarding for breeding purposes all but the choicest, but it PAYS. Purity of blood is as important in the profitable conduct of a garden as of a stable.

We sell thoroughbred seeds. There are no better produced anywhere in the world. They cost us much more than ordinary seeds but are cheap at any price. Does it not seem to you good policy to plant only thoroughbred seeds from the most successful and most extensive plant breeders in the world?

OUR TERMS ARE STRICTLY CASH WITH THE ORDER. We do not send C. O. D., as the cost of collecting return charges is quite an unnecessary item of expense and the prices being given, we can conceive of no necessity to warrant goods being so sent.

HOW TO SEND MONEY. Remittances may be made at our risk by any of the following methods, viz.: Postal Money Order, Draft on New York or Chicago, or Express

COMPANY'S MONEY ORDER.
The rates charged for Postal Money Orders and Express The rates charged for Postal Money Orders and Express Money Orders are now so low that these are the best ways to remit. We will bear the expense of sending money in either of these ways. Deduct the cost of the order from amount sent. Express Money Orders can be obtained at ALL offices of the principal Express Companies. They are CHEAP and ADDITION OF THE STATES O

and ABSOLUTELY SAFE.
When Money Orders cannot be obtained, letters containing money should always be registered. Money in ordinary letters is unsafe. If currency is sent by express, the charges should be prepaid, and if local checks are used they must be

FREE OF POSTAGE OR EXPRESS CHARGES. PACKETS OUNCES, Two OUNCES, QUARTER POUNDS OR POUNDS, ordered at list prices, will be sent free by mail or express.

Customers ordering enough for a freight shipment, 100 pounds or more, or desiring to pay their own express charges, may deduct 10 cents per pound from prices of this catalogue on all seeds quoted by the pound or less.

PINTS AND QUARTS. PINTS, QUARTS and FOUR QUARTS, ordered at list prices, FIFTEEN CENTS PER QUART, TEN CENTS PER PINT, must be added for postage or express charges and they will then be sent free.

ONE-FOURTH BUSHEL, BUSHEL AND HUNDRED POUND LOTS. Where ONE-FOURTH BUSHEL, BUSHEL OR HUNDRED POUND lots are ordered, we deliver free at depot or express office in Detroit, Mich., the freight or express charges to be paid by the party ordering.

Where perishable or other goods are ordered to be sent by freight or express to such great distances that the cost of transportation will nearly or quite equal the value of the goods, we must decline to ship unless purchasers remit us, in addition to the price of goods, sufficient funds to prepay transportation charges. When this requirement is not complied with, we reserve the right of declining the order and returning money to the person ordering.

SEEDS BY MEASURE. ONE-FOURTH BUSHEL and over sold at Bushel rates; four quarts and over up to oxequarter bushel sold at four-quart rates; less than four quarts sold at quart or pint rates.

SEEDS BY WEIGHT. We supply HALF POUND and over at POUND RATES; less than HALF POUND lots are charged at OUNCE, TWO-DUNCE OF QUARTER-POUND RATES; 25 LBS. and over at 100 LB. RATES WHEN QUOTED.

BAGS. To every order for one-quarter bushel and upwards, to the amount of two bushels, 25 cents must be added for a new bag in which to ship.

SEEDS IN PACKETS. We offer the following inducements to those wishing to purchase seeds in packets; Select packets to the value of \$1.15 and send us \$1.00; for \$2.35 send \$2.00; for \$3.60 send \$3.00; for \$4.85 send \$4.00; for \$51.50 send \$1.00; for \$26.00 send \$20.00. The seeds will be sent by mail, postpaid, but these low rates apply to seeds in PACKETS ONLY and at CATALOGUE PRICES and NOT to seeds by weight or measure.

NAME AND ADDRESS SHOULD ALWAYS BE GIVEN. We frequently receive letters containing money and orders, which we cannot fill because the sender has falled to sten HIS NAME OR THE P. O. ADDRESS is omitted and the post mark being blurred, we are unable to fill the order, no matter how much we desire to do so. Use our Order Sheet and Envelope whenever you can, filling out the blank and signing your name and you will have no cause to censure us.

name and you will have no cause to censure us.

GUARANTEE. Complaints made that seeds are not good, should quite as often be attributed to other causes as to the quality of the seeds. There are hundreds of contingencies continually arising to prevent the best seeds always giving satisfaction, such as sowing too deep, too shallow, in too wet or too dry soil; insects of all descriptions destroying the plants as soon as or before they appear; wet weather, cold weather, frosts, chemical changes in the seeds induced by temperature, etc. For the above reasons it is impracticable to guarantee seeds under all circumstances.

We give no warranty, express or implied, as to description, purity, productiveness, or any other matter of any seeds we send out, and we will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms they are at once to be returned.

terms they are at once to be returned.

D. M. Ferry & Co.

DETROIT, MICH., January 1, 1910.

MIKADO PINK ASTER

#### Mikado Pink Aster

Unquestionably the finest aster in bloom at our Experimental Gardens last summer. We had in one section of our trial 136 different lots of asters and not one was more vigorous in growth, freer from blight or more even in blooming. Plants about two feet high and branching in habit of growth. Stems from a foot to sixteen inches long, bearing flowers four to five inches in diameter. The petals are long, rather flat, some of them slightly curved and twisted. The centers of the flowers are very well covered. Color at first nearly white, changing gradually to light rose or rose with lavender tint. A midseason aster unsurpassed in beauty of form and color. (See cut) Pkt. 25c.

#### Bush Eschscholtzia (Hunnemannia)

This is not so easily grown as the ordinary California Poppy which it resembles, but year after year in our Experimental Gardens the Bush Eschscholtzia has attracted more attention and has brought out more enthusiastic comment than any similar flower on our list. large size and rare purity of color of the flowers and their coming successively through a long season of blooming amply repay for any trouble taken in starting the plants. (See colored plate on back cover) Pkt. 5c; Oz. 50c.

"E. J. Deal" Spencer Sweet Pea

A firm of prominent English seedsmen specializing in sweet peas has enabled us to offer one of their most attractive sweet pea novelties of the season. This is a mam moth white Spencer with a well defined band of carmine at the edge. Pkt. 25c.

Recent improvements in sweet peas are so marked as to seem almost incredible to anyone who has not observed the newer varie-

MIKAGO PINK ASTER

ties now obtainable. The Spencer class is generally conceded to be the acme of perfection in sweet peas. Our list of "Spencers" on page 88 includes the best varieties yet perfected. The older grandiflora sweet peas on pages 89 and 90 still have the advantage of a greater variety of colors and are generally freer blooming and perhaps a little more easily grown. Both classes are worth planting extensively.

Cardinal and Double White Fringed Poppies

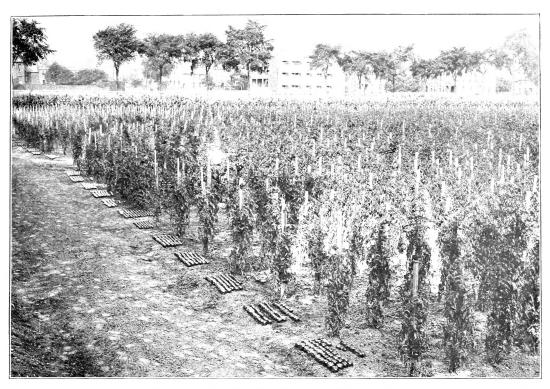

The finest double poppies in cultivation. The flowers are three to four inches in diameter and perfectly double. The two varieties being in bloom at the same time afford a splendid color contrast. (See colored plate, page 65 and further description, page 84) Either variety, Pkt. 5c.

EXPERIMENTAL GARDENS

Well conducted experimental gardens or trial grounds are indispensable for a seed house expecting to enjoy the patronage of intelligent and discriminating people. Each year we spend thousands of dollars on the maintenance of these grounds without planning for a dollar of direct income from them. It pays us indirectly many times the investment. Our trials at these grounds enable us to prove what we offer. Thousands of customers are thereby protected and can be confident when they buy Ferry's Seeds that they are purchasing the very best obtainable.

Views on the opposite page are from photographs taken at our Experimental Gardens and indicate the care with which trials are carried on. An average tomato trial, for example, is of 175 to 200 different lots of seed. The fruits from a score or more plants of each lot are picked as they mature, separated into classes according to size or smoothness, the fruits of each class counted, weighed and recorded. Every few days throughout the season this operation is repeated, and from the summary, together with our observations on the vines, the color and quality of the fruits our experts have infor-

mation of greatest value to our customers.

TOMATO TRIAL AT OUR EXPERIMENTAL GARDENS. The fruits, as they ripen, are graded carefully, compared as to color, size and smoothness, and the weights tabulated.  $\cdot$ 

OUTDOOR LETTUCE TRIAL AT OUR EXPERIMENTAL GARDENS.

Habit of growth, color, time of maturing and quality have been carefully observed in practically every new variety catalogued by anyone. (See Experimental Gardens note on opposite page)

#### Michigan White Wax Bean

This splendid variety, introduced by us in 1907, is now generally recognized as one of the most valuable acquisitions yet added to the list of bush or snap beans. Briefly described it is a white seeded Golden Wax; pods golden yellow and are fully as attractive as our well known Golden Wax and of the same exceptionally fine quality; vine is vigorous and unusually productive; seed white, a most valuable feature heretofore unattained in a bush bean of highest quality. (See further description, page 14) Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Bu. \$9.00

#### Carpinteria Pole Lima

That this is "the most perfect pole lima yet introduced" is the judgment of Mr. Henry Fish who has for many years been recognized as one of the country's most skillful and experienced growers of lima beans. Vine strong, of vigorous growth, producing an abundance of fine large pods usually closely filled with four beans of largest size and much thicker than the average pole lima. Color of the bean is distinctive in having a decided greenish tint, an indication of fine quality. When cooked the beans are very thin skinned, extremely tender and of especially fine flavor. A splendid bean for the home and market garden. Pkt. 15c; Pt. 45c; Qt. 75c; 4 Qts. \$2.75

If beans are ordered by mail or express pre-paid add 10 cents per pint, 15 cents per quart for charges.

#### OAKVIEW

"Like does not always produce like." This fact constitutes at once the necessity for a stock seed farm and its golden opportunity. A single seed has within itself an untold number of varying tendencies inherited

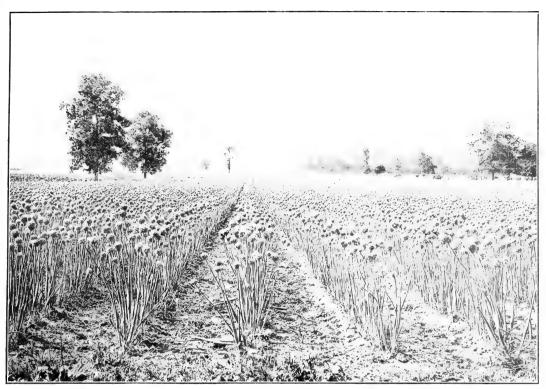

from thousands of ancestors. The child of an apparently perfect plant may differ so radically from its parents as to constitute either a new and different variety or a degenerate resembling a far remote wild ancestor. However, it is possible and practicable to intensify a given set CARPINTERIA POLE LIMA

of tendencies by breeding successively from only the most uniform individuals in each generation. Thus the tendency to produce the particular type they represent is finally reasonably sure to overpower all other and more scattering tendencies and the type is fixed. The difference between thoroughbred and ordinary plants is as great as the difference between thoroughbred and ordinary animals,

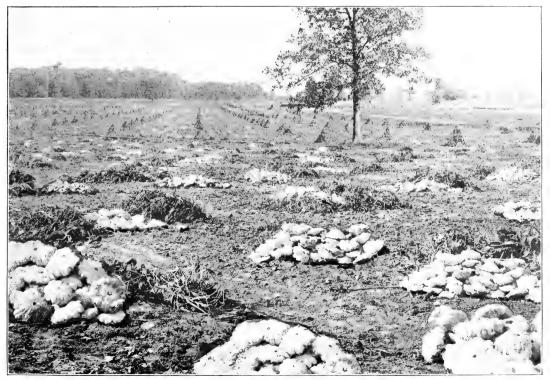

At Oakview we have 570 acres devoted to the development of thoroughbred stock seeds to be used exclusively in producing the seeds we sell. Here are selected every season the choicest flowers and vegetables. No pains are spared to save only the best. Unless these very expensive operations are carried on through a series of years, plants cannot be made to approach uniformity in type. Since no other seedsman possesses as great capital, as adequate facilities or as long experience, we are justified in saying no other seedsman can compete with us in the quality of seeds we sell any more than we can sell our thoroughbred stocks for the prices charged for ordinary seeds.

At Oakview, too, are produced either by deliberate cross-breeding or by accident many of the new varieties which, after having been fixed in their characteristics by years of selection and proved to be of greater value than old established kinds already on the market, are given to the world as novelties.

We are proud to say these introductions have, as a rule, remained long in popular favor.

FIELD OF SOUTHPORT RED GLOBE ONIONS AT OUR OAKVIEW STOCK SEED FARM. Each year we grow ample quantities of stock seeds from most carefully selected pedigreed bulbs.

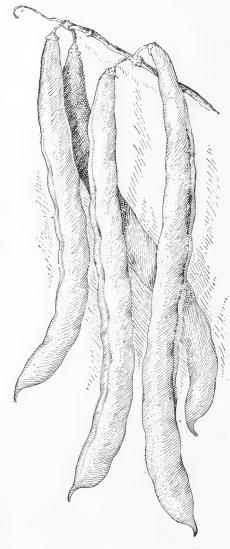

FIELD OF MAMMOTH WHITE BUSH SCALLOP SQUASHES AT OUR OAKVIEW STOCK SEED FARM.

Stock seeds are saved only from fruits of the most desirable shape, color and time of maturing.

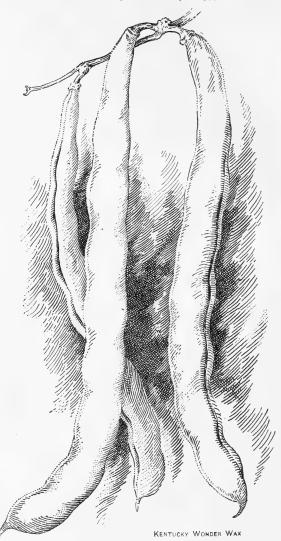

(See Oakview note on opposite page)

#### Kentucky Wonder Wax Bean

This remarkably vigorous growing, wax podded pole bean is similar, aside from color of pod, to the well known green podded Kentucky Wonder. The pods are very long, broad, very fleshy and quite stringless as snaps, while as green shells later in the season the pods are well filled with large beans of delicious flavor. Its earliness and hardiness commend it as a pole bean well adapted even for northern latitudes. Its very large, golden yellow pods are certainly handsome in appearance and are unexcelled in quality by any wax podded bean of its class. The color of the seed is brown, a shade darker than Kentucky Wonder. Pkt. 10c; Pt. 30c; Qt. 50c; 4 Qts. \$1.75; Bu. \$10.00

ST. LOUIS PERFECTION WHITE

St. Louis Perfection White Bean

An early maturing, white seeded pole bean, very desirable for snaps and certainly unsurpassed green shelled. Vine vigorous and very productive. Pods round, very long, irregular in shape and quite stringless. The beans when shelled green are large, very tender and white, a very desirable feature when comparison is made with the colored beans of other varieties of this class. Many of the most successful gardeners about St. Louis consider this bean by far the most desirable pole bean yet offered. Pkt. 10c; Pt. 30c; Qt. 50c; 4 Qts. \$1.75; Pk. \$3.00

Giant Crimson Pepper

The earliest maturing and most productive very large sweet pepper. The plant is vigorous and upright growing, larger than that of Chinese Giant and produces much more fruit. The fruits ripen earlier than any of the very large sorts on the market and average heavier, as the flesh is unusually thick. Color deep crimson when matured; flavor very mild. We consider this the most desirable very large pepper yet introduced. (See colored plate opposite for plant and fruit as grown at our experimental gardens.) Pkt. 5c; Oz. 55c; 2 Oz. \$1.00; ¼ Lb. \$1.60; Lb. \$5.50

If beans are ordered by mail or express prepaid add 10 cents per pint, 15 cents per quart for charges,

#### White Malakhof Corn

A handsome, very early sweet corn of splendid quality. Stalks about four feet high; ears about five inches long, twelve rowed; slender but with very small cob which is well filled with small, deep, sweet and tender grains. Follows closely Mammoth White Cory in time of maturing. This variety was developed by the Bureau of Plant Industry of the Department of Agriculture through selection of the white grained ears of the Malakhof, and differs from the original stock in being much more uniform in shape and character of both ear and grain, decidedly earlier and of better quality. (See cut) Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Pk. \$2.50

#### White Mexican Corn

White Mexican is a comparatively new, early variety and the name brings to mind the older Black Mexican corn which is recognized as the sweetest and one of the best sorts on the market. Its color however prejudiced many against it and White Mexican in name at least would seem most desirable. In our trials we have found White Mexican considerably earlier than Black Mexican but are not certain that its quality, while excellent for so early and large an ear, is quite equal to the later maturing older variety. (See full description, page 29) Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Pk. \$1.75

#### Golden Bantam Corn

This very early, yellow grained sweet corn when in best condition for the table is remarkably sweet and tender. The stock we offer has been improved by several years of careful selection and therefore will be found decidedly superior to much that is offered. (See full description, page 29) Pkt. 10c; Pt. 20c; Qt. 30c; 4 Qts. \$1.00; Bu. \$6.00

If corn is wanted by mail or express prepaid add 10 cents per pint, 15 cents per quart for charges.

# soli seli see su a vai di di di to an wi mm

KLONDIKE

#### Klondike Cucumber

Market growers have of late years found an increasing demand for an ideal slicing cucumber and they have been seeking a variety which would grow to a suitable size for shipping without turning a very light green color as do many varieties of excellent quality. The Klondike is a recent development which seems to answer fully all the requirements of an ideal slicing cucumber. No variety with which we are familiar retains the much desired dark green color so long. The vines are hardy and productive and the fruits remarkably uniform in shape and size. (See cut on this page, and further description, page 32) P. Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25 Pkt. 5c;

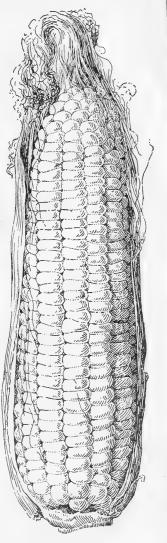

Pickle factories are very exacting in their requirements for a bottle pickle and of late in the various growing districts one strain has been rapidly succeeded by another in popular favor. Snow's Pickling is a variety used exclusively by many large factories and the call for it led us to make careful trials and then grow a very fine lot of stock seed procured from the originator. (See cut and further description, page 31) Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

Early Detroit Tomato

This excellent variety was introduced by us last year and was tried out on a small area by many growers of tomatoes for shipment. The orders now in our hands for large quantities of the seed are conclusive evidence that Early Detroit meets in no small degree the requirements of a very critical class of tomato growers. We consider Early Detroit the best large, purplish pink tomato yet introduced. (See colored plate opposite and further description, page 56) Pkt. 5c; Oz. 50c; 2 Oz. 85c; ½ Lb. \$1.50; Lb. \$5.00

Chalk's Early Jewel Tomato

The best all round variety for the home garden is the opinion of a leading tomato expert while visiting our tomato trial last year. (See colored plate opposite and description, page 55) Pkt. 5c; Oz. 30c; 2 Oz. 55c; 4 Lb. \$1.00; Lb. \$2.75

WHITE MALAKHOS

# THE TWO BEST LARGE EARLY TOMATOES

SEE OPPOSITE PAGE.

EARLY DETROIT

CHALKS EARLY JEWEL

#### Admiral Togo Musk Melon

This orange fleshed melon of the Netted Gem or Rocky Ford type is at present undoubtedly the very best basket melon obtainable. On the Chicago and other large markets this type of melon continues to command prices much higher than those obtained for the best green fleshed melons, otherwise similar in appearance. The Admiral Togo possesses the characteristic netting, shape, size and shipping quality of the Netted Gem or Rocky Ford with the very thick, orange flesh and splendid quality of the Defender. We are convinced that such a combination of good qualities in the Admiral Togo makes it an ideal table or basket melon. (See further description, page 38) Pkt. 5c; Oz. 20c; 2 Oz. 35c; & Lb. 60c; Lb. \$1.75

#### Harris' Earliest Water Melon

We have carefully observed this splendid variety in our trials for several seasons and are convinced that it is the very best first early melon. The fruits are slightly oval, with irregularly mottled stripes of light and dark green, very even in shape and size.

ADMIRAL TOGO MUSK MELON

No variety that we know of matures fruits of such large size so early in the season. Flesh bright red, tender, sweet and of exceptionally good quality. (See cut and further description, page 39) Pkt. Sc; Oz. 10c; 2 Oz. 20c; 4 Lb. 30c; Lb. \$1.00

#### Onion Seed

No vegetable is harder to keep true than the Onion. Not only are there the ordinary dangers from crossing but if all conditions are not ideal scallions or plants without true bulbs are very likely to be formed. Moreover, good color and shape are never attained without many seasons of the most painstaking selection; otherwise the shade in the case of reds and yellows is weak and pale, making the Onions much less attractive in the market. We have been breeding Onions for half a century and the results are all that the most exacting expert could desire. In uniformity and excellence of color and shape and in evenness of maturing there are few Onions in the world equal to those grown from our seed. There is none better. (See colored plate, page 43, showing three ideal globe onions and field just before being harvested at our Oakview Stock Seed Farm)

#### Alderman Pea

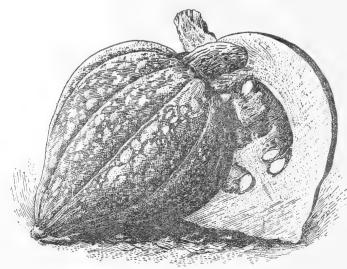

This comparatively new pea is in many respects the very best early main crop variety of the valuable Telephone type. The vines grow nearly five feet high, are dark green, vigorous and exceedingly productive. Pods very large, long, dark green, similar to Duke of Albany and about the same in season. The peas are of largest size and unsurpassed in quality. Market gardeners are demanding the large podded, dark colored sorts which retain their fine appearance even after shipping a long distance. The Alderman answers these requirements and furthermore is the most productive variety of

prepaid add 10 cents per pint, 15 cents per quart for charges.

#### Delicious Squash

The superiority in quality of this splendid fall and early winter variety must be admitted by all who give the Delicious a fair trial even if comparison is made with any other sort heretofore considered the standard of The flesh when excellence. cooked is deep yellow, very fine grained and of splendid flavor. Although when first introduced a little uneven in shape and exterior color, we have by continued and careful selection made a marked improvement in uniformity of type. DELICIOUS SQUASH

The Essentials to the Production of

# GOOD VEGETABLES AND BEAUTIFUL FLOWERS

Good Soil A rich, sandy loam is the best, but a fair described gree of success may be secured from any soil which can be made rich and friable. Vegetables of the best quality cannot be grown on barren sand, a cold, hard, lumpy clay, nor in the shade of orchard or other trees.

Liberal Manuring
A soil which does not need enriching in order to produce the best results is rarely found and very often success is in proportion to the liberality with which fertilizers have been used. Well decomposed stable manure where straw bedding has been used for bedding is not so good. Often wood ashes at the rate of one peck up to one bushel to the square rod will be of great benefit. Commercial fertilizers are excellent and may be used at the rate of 4 to 12 pounds to the square rod and the more concentrated forms, such as Nitrate of Soda, Guano, Dried Blood and Potash Salts, at the rate of one to six pounds to the rod. A mass or lump of any of the commercial fertilizers, even if it is but a quarter of an inch in diameter, is liable to kill any seed or young plant which comes in contact with it, so it is very important if such fertilizers be used that they be thoroughly pulverized and mixed with the soil.

Thorough Preparation Rich soil and liberal manufacturing will avail little without thorough preparation. The soil must be made friable by thorough and judicious working; if this is well done all that follows will be easy; if it is neglected, only partial success is possible and that at the cost of a great deal of hard work. The garden should be well plowed or dug to a good depth, taking care, if it is a clay soil, that the work is not done when it is too wet. If a handful from the furrow moulds with slight pressure into a ball which cannot be easily crumbled into fine earth again, the soil is too wet and if stirred then will be hard to work all summer. The surface should be made as fine and smooth as possible with the harrow or rake. It is generally desirable to plow the whole garden at once and to do this in time for the earliest crops, but the part which is not planted for some weeks should be kept mellow by frequent cultivation.

Good Seeds There is no more prolific source of disappointment and failure among amateur Properly Planted gardeners than hasty, careless or improper sowing of the seed. A seed consists of a minute plant enclosed in a hard and more

or less impervious shell with a sufficient amount of food stowed in or around the germ to sustain it until it can expand its leaves, form roots and provide for itself. Moisture, heat and a certain amount of air are necessary to secure germination. The first steps are the softening of the hard, outer shell and the leaves of the plant from the absorption of water, resulting in the changing of the plant food from the form of starch to that of sugar. In the form of starch the food is easily preserved unchanged, but the plant cannot use it. While in its sugary condition it is easily appropriated but perishable and if not used it speedily decays and the plant is destroyed. A dry seed may retain its vitality and remain unchanged for years, but after germination has commenced a check of a day or two in the process may be fatal. There is no time in the life of a plant when it is so susceptible of injury from the over-abundance or want of sufficient heat and moisture as at the period between the commencement of germination and the formation of the first true leaves. It is just then that the gardener should aid in securing favorable conditions. These are:

FIRST—A proper and constant degree of moisture. The soil should always be moist, never wet. This is secured by making the surface of freshly dug soil so fine and the pressing it over the seed so firmly with a roller or the back of the hoe that the degree of moisture remains as nearly uniform as possible.

SECOND—A proper degree of heat, secured by sowing the seed when the temperature of the soil is that most favorable to the germination of the seed of that particular plant. Too high a temperature is often as detrimental as one too low. The proper temperature for each sort may be learned from a careful study of the following pages and the experience of the most successful gardeners in your vicinity.

THIRD—Covering the seed to such a depth that while a uniform degree of heat and moisture is preserved the necessary air can readily reach the germinating seed and the tiny stem push the forming leaves into the light and air. This depth will vary with different seeds and conditions of the soil and can be learned only from practical experience. In general, seeds of the size of the turnip should not be covered with more than half an inch of earth pressed down, while corn may be an inch, beans an inch to two inches and peas one to three inches deep.

FOURTH-Such a condition of soil that the ascending stem can easily penetrate it and the young roots speedily find FOURTH—Such a condition of soil that the ascending stem can easily penetrate it and the young roots specially indicated from the ground and taking care never to sow fine seeds when the ground is wet. Occasionally a heavy or long continued rain followed by a bright sun will so bake and crust the surface that it is impossible for the young plant to find its way through it, or a few days of strong wind will so dry the surface that the young plants will be killed. In such cases the only remedy is to plant again.

Judicious Cultivation
Not only should every weed be removed as soon as it appears, but the crust which forms after a rain should be broken up and the ground stirred as soon as it is dry enough to permit it. The more frequently and deeply the soil is stirred while the plants are young, the better, but as they develop and the roots occupy the ground, cultivation should be shallower until it becomes a mere stirring of the surface. The yield and quality of vegetables have often been decidedly lowered by injudiciously deep and close cultivation after the roots of the plants had fully occupied the ground. A very small garden, well cultivated and cared for, will give larger returns and be in every way more satisfactory than a much larger one poorly prepared and neglected,

#### HOW TO BUILD AND MANAGE HOTBEDS

For early vegetables, some provision for starting certain plants earlier than can be done in the open air is desirable; for this purpose nothing is better than a good hotbed and its construction is so simple and the expense so slight that every garden should have one. A hotbed proper not only protects the plants from the cold, but supplies bottom heat. By this term the gardener means that the soil is constantly kept several degrees warmer than the air above, that being the conditions of ar as heat is concerned, which is most the condition, so far as heat is concerned, which is most favorable for rapid and vigorous growth and gardeners usually secure it by making a compact pile of some fermenting material and covering it with the earth in which the plants are to grow.

Heating Material The best heating material that is easily available is fresh horse manure, containing a liberal quantity of straw bedding. Such manure, if thrown into a loose pile, will heat violently and unevenly and will soon become cold. What is wanted in the hotbed is a steady and moderate but lasting heat. To the noticed is a steady and moderate but lasting heat. To secure this, the manure should be forked over, shaken apart and if dry, watered and allowed to stand a few days and then be forked over again, piled and allowed to heat a second time, the object being to get the whole mass into a uniform degree of fermentation and as soon as this is accomplished it is fit for use.

Sash Some gardeners use sash made especially for hotbeds and glazed with small lights cut from odds and ends and so furnished at very low rates. Such sash can usually be procured in any of our large cities and costs much less than if made to order. For garden use, however, we much prefer a smaller sash that can be easily handled we much preter a smaller sash that can be easily handled and the use of larger and better glass. We recommend that for home gardens the sash be about two and one-half by four or five feet and that the glass be not less than 10x14, laid with not more than one quarter inch lap. In giving the order to one unaccustomed to the work, it would be well to state what they are to be used for, and that they need to be made like skylight sash.

The Frame
This may be made of sound one-inch lumber, the back twelve to fourteen inches high, the front ten to twelve. It should be well fitted to the sash so as to leave as little opening as possible and yet allow the sash to be easily moved up and down, even when the frame is culto well. frame is quite wet.

The Soil This should be light, rich, friable. Any considerable amount of clay in it is very objectionable. If possible, it should be unfrozen when put into the bed; for this reason it is much better to prepare it the fall before and cover the pile with enough coarse manure or straw to keep out the frost.

This requires careful attention Making the Bed This requires careful attention as future success depends largely upon the manner in which this work is done. Having cleared away snow and ice, build a rectangular bed one foot larger each way than the frame to be used, carefully shaking out and spreading each forkful and repeatedly treading down the manure so as to make the bed as uniform as possible in solidmanure so as to make the bed as uniform as possible in solidity, composition and moisture. It is of the utmost importance that this shaking apart and evenly pressing down of the manure should be carefully and thoroughly done; unless it is, one portion will heat quicker than the other and the soil will settle unevenly, making it impossible to raise good plants. The proper depth of the bed will vary with the climate, season and the kind of plants to be raised. A shallow bed will quickly give a high temperature which will soon subside; a deeper one, if well made, will heat more moderately, but continue much longer. For general purposes, a bed about two feet deep will be hest.

subside; a deeper one, if well made, will heat more moderately, but continue much longer. For general purposes, a bed about two feet deep will be best.

The bed completed, the frame and sash may be put on and fresh manure carefully packed around the outside to the very top (if the weather is at all severe, this outside banking should be replenished as it settles). The bed should then be allowed to stand with the sash partially open for a day or two to allow the steam and rank heat to pass off. day or two to allow the steam and rank neat to pass off.
The earth should then be evenly distributed over the surface
of the bed and carefully leveled. The earth should not be
shoveled or dumped in one or more places in the bed and
then leveled; if this is done uneven settling of the bed invariably results. Care should be taken that the soil is dry
and friable. If wet or frozen soil must be used, it should be
placed in small piles until well dried out before spreading. The heat at first will be quite violent, frequently rising to

120 degrees, but it soon subsides and when it recedes to 90 degrees the seed may be planted. The importance of using dry soil and allowing the first rank heat to pass off is very great. Every season thousands of hotbeds fail of good results from these causes and seedsmen are blamed for failure resulting from everheat or yet, some soil. ure resulting from overheat, or wet, soggy soil.

Management of the Bed success are a steady uniform degree of heat and moisture: keeping the soil at all times a few degrees warmer than the air and the careful "hardening off" (by exposure to the air and diminishing the supply of water) of the plants before transplanting into the open air. Simple as these may seem to be, there are many difficulties in the way of securing them, prominent among which is overheating the air under a bright sun. Without experience one would secreely believe how quickly the tem-The essentials for which is overheating the air under a bright sun. Without experience one would scarcely believe how quickly the temperature inside of a well built hotbed will rise to 90 or 100 degrees upon a still, sunny day, even when the temperature outside is far below freezing, or how quickly the temperature will fall to that outside, if upon a windy, cloudy day the sash is left open ever so little. A rush of cold air driven the sash is left open ever so little. A rush of cold air driven over the plants is far more injurious than the same temperature when the air is still. Again, in cloudy weather, a bed will go several days without watering, but will dry up in an hour when open on a sunny day. The details of management, however, must be learned by experience, but may be easily acquired by one who gives the matter careful attention.

A Cold Frame is a simple construction of boards for wintering over young plants. Cabbage, Lettuce, Caulifower, etc. and is also useful to protect and harden off plants from the greenhouse or hotbed before fully exposing them in the open air. Select a dry, southern exposure, form a frame from four to six feet wide and as long as required. The back should be fourteen to eighteen inches high and the front eight to twelve, with a cross-tie every three feet. The frame may be covered with sash or cloth. Seeds of the vegetables to be wintered, sown in open border early in September, will be ready to plant in cold frames about the last of October The soil should be well prepared and smoothly raked before planting. Admit air freely on pleasant days, but keep close in severe weather.

These frames are particularly useful in the county of the covered with a covered with a severe of the covered with a covered with a severed to the covered with a covered weather.

In severe weather.

These frames are particularly useful in the south and may be covered more cheaply with cloth shades than by sash. The shades are made as follows: Make light but strong wooden frames to fit over the bed and of a width to receive some common brand of cotton cloth. The cloth may be unbleached and should be stretched over and securely tacked to the frames. We have found that Plant Bed Cloth, which we have for sale, is superior to any ordinary cloth for this purpose.

Transplanting
In transplanting, the main points to the plants so as to avoid injury to the roots, setting out as soon as possible to prevent the air coming in contact with the roots, setting firmly so as to enable the plant to take a secure hold of the soil and shading to prevent the hot sun from withering and blighting the leaves. Where a rank or soft growth of tops has been made in hotbed it is frequently desirable to trim off some of the larger leaves before taking up to transplant so that evaporation later may be retarded desirable to trim off some of the larger leaves before taking up to transplant so that evaporation later may be retarded. In transplanting from a hotbed, harden the plants by letting them get quite dry a day or two before, but give an abundance of water a few hours before they are taken out. It is most apt to be successful if done just at evening, or immediately before or during the first part of a rain, about the worst time being just after a rain, when the ground being wet it is impossible to sufficiently press it about the plant without its baking hard. If water is used at all it should be used freely and the wet surface immediately covered with dry soil.

The best time to water plants is early in the Watering morning or in the evening. Water may be given to the roots at any time, but should never be sprinkled over the leaves while they are exposed to bright sunshine. If watering a plant has been commenced, continue to supply it as it is needed, or more injury than good will result from what has been given. One copious watering is better than many scanty sprinklings. The ground should always be stirred with a hoe or rake before it becomes so very dry as to cake or crack.

## VEGETABLE SEEDS

WITH GENERAL DIRECTIONS FOR CULTIVATION

#### ARTICHOKE

In February or March sow and transplant in hotbeds so as to give plenty of room until danger of frost is over. Then set in very rich, well drained soil in rows four feet apart and two feet apart in the row. The plants can be raised in seed beds out of doors, but in that case will not be likely to produce heads the first year. The seed we offer is that of the true artichoke which is a very popular vegetable in Europe. In it the edible portion is the thickened scales at the base of the flower heads or buds. The plant is very different from what is known in America as Artichoke or Jerusalem Artichoke, in which the edible portion is the tuber. Late in the fall cut off the old tops and thoroughly protect the crowns with leaves or straw to prevent severe freezing. The second year the fall cut off the old tops and thoroughly protect the crowns with leaves or straw to prevent severe freezing. The second year thin the starting shoots to three of the best, which will commence to form heads about July 1st. The plants may also be blanched like Cardoons. This is done by cutting back the stems close to the ground in July, the rapidly growing shoots which then start up may be tied and blanched like celery. As Artichoke plants do not yield satisfactorily after three or four years it is best to start a new plantation as often as once in three years.

Large Globe, or Paris

The best sort for general use. Plant vigorous and hardy, leaves silver gray, ribs reddish at the base and without spines. Buds large, nearly round; scales pale green, shading to violet at the base. No other variety has such a broad, thick and fleshy receptacle or bottom. Height of stem about two and one-half to three feet. Pkt. 5c; Oz. 50c; 2 Oz. 85c; ½ Lb. \$1.50; Lb. \$5.00

#### **ASPARAGUS**

Beds are usually formed by setting roots one or two years old which can be procured of us. If you wish to grow plants from the seed yourself, pour hot but not boiling water on the seed and let stand until cool; pour it off and repeat two or three times with fresh hot water. Then sow in drills one foot apart and two inches deep in light, rich soil. When the plants are well up, thin to about one inch apart and give frequent and thorough cultivation during the summer. If this has been well done, the plants will be fit to set the next spring. The permanent beds should be prepared by deep plowing or spading and thoroughly enriching the ground with stable manure or other fertilizer; a moist, sandy soil is best. If the subsoil is not naturally loose and friable, it should be made so by thoroughly stirring with a subsoil plow or spade. Set the plants about four inches deep and one to two feet apart in rows four to six feet apart. After the plants are well started, give frequent and thorough cultivation. Early the next spring spade in a heavy dressing of manure and about one quart of salt and double the quantity of fresh wood ashes to each square rod and cultivate well as long as the size of the plants will permit, or until they begin to die down. The next season the bed may be cut over two or three times, but if this is done, all the shoots, no matter how small, should be cut. After the final cutting, give a good dressing of manure, ashes and salt. Cultivate frequently until the plants meet in the rows. In autumn after the tops are fully ripe and yellow, they should be cut and burned. A bed 15x50 feet, requiring about one hundred plants, if well cultivated and manured, should give the following season an abundant supply for an ordinary family and continue productive for eight or ten years. and continue productive for eight or ten years.

Palmetto
A very early maturing and prolific variety, producing an abundance of very large, deep green shoots of the finest quality. SEED—Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 65c. ROOTS—Postpaid, \$1.50 per 100; by freight or express, not prepaid, \$1.00 per 100; \$6.00 per 1000

Conover's Colossal A very large, green sort, and of very and most generally cultivated varieties.

2 Oz. 15c; ½ Lb. 20c; Lb. 60c. ROOTS—Postpaid, \$1.50 per 100; by freight or express, not prepaid, \$1.00 per 100; \$6.00 per 1000

Columbian Mammoth White Introduced by us in 1893. Shoots of largest size and clear white until four to six inches above the surface. Nearly all seedlings will produce clear white shoots and the green ones can be readily rejected when setting out the permanent bed. SEED—Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c. ROOTS—Postpaid, \$1.50 per 100; by freight or express, not prepaid. \$1.00 per 100; \$6.50 per 1000

PALMETTO

# BEANS

No crop responds more readily to good soil and cultivation; and a light, rich, well drained loam which was manured for the previous crop is most desirable. If too rank manure is used it is apt to make the plant run too much to vine. Beans are very sensitive to both cold and wet and it is useless to plant them before the ground has become dry and warm. The largest returns will result from planting in drills from two to three feet apart and leaving the plants two to six inches apart in the row. Up to the time of blossoming they should have frequent shallow cultivation, but any mutilation of the roots by cultivation after the plants come into bloom is likely to cause the blossoms to blast and so cut off the crop. The cultivation of beans should always be very shallow and it is useless to expect a crop from a field so poorly prepared as to need deep stirring after

planting.

planting.
Varieties should be selected so as to give a succession both of string and green shelled beans. The wax varieties have a strong tendency to degenerate into a mixture of green and wax podded plants unless there is constant attention given to the removing of any green podded plants which may appear in the seed crop. Hence it is very important to use seed from reliable sources only.

# DWARF, BUSH OR SNAP WAX PODDED SORTS

Challenge Dwarf Black Wax

Mentify of this variety as the earliest wax podded bean. The enormous demand for it proves that it meets popular requirements and has all the sterling qualities we claim for it. In all our many comparisons of this bean with other extra early sorts, we have found it the first to give a full picking of pods which were unexcelled by any in quality. The pods are clear waxy-white, medium size, quite round, very fleshy, crisp, tender and stringless. Seed jet black, longer and more curved than Prolific German Wax. The best extra early wax bean for the home or market garden. Pkt. 10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$7.50

market garden. Pkt. 10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$7.50

D. M. Ferry & Co's Golden Wax

tended and careful tests have convinced us that none of the so called improved strains is equal in general excellence to the seed we offer, which has all been carefully selected and grown from the original D. M. Ferry & Co's Golden Wax. Early, very productive; pods long, nearly straight, broad, flat. golden yellow, very fleshy and wax-like; cooking quickly as snaps, shelling well when green, and of the highest quality used in either way. Seed medium sized, oval, white, more coless covered with two shades of purplish red. The amount and shade of color on this and all parti-colored beans will be affected greatly by conditions of soil and ripening. Pkt. 10c;

soil and ripening. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

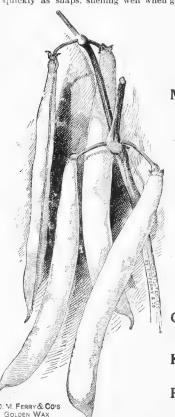

Michigan White Wax
This new wax bean has proved
of exceptional value. For years
past there was a constant demand for a white seeded wax
bean of the highest quality. At
last we were able to produce it.
Briefly described Michigan
White Wax is a white seeded
D. M. Ferry & Co's Golden Wax
but in several vital features it is b. M. Ferry at Cos Goneli Wax but in several vital features it is distinctly superior to that ex-cellent and exceedingly popu-lar variety. The vine is a little larger, more robust and vigor-ous; foliage a little heavier. The handsome pods are produced in greater abundance and are very

greater abundance and are very uniform in size and color which is a very attractive light golden yellow; pods comparatively broad, meaty and of the same superior quality as our Golden Wax. The seed is clear white. This feature alone gives the variety a very decided advantage over all other early wax podded beans in that as snaps they cook without discoloring and thus are more attractive on the table, while as dry beans they are very handsome and quite as useful as any of the staple white beans. We believe canners have never been offered a bean so fully meeting their requirements as to earliness, color and splendid quality. Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Bu. \$9.00

Grenell Rust Proof Wax than the Golden Wax; the pods are broader and flatter but slightly inferior in quality. Seed in color and size similar to our Golden Wax but darker. A very popular sort with some gardeners. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7,00

Keeney's Rustless Golden Wax Short runners. Pods produced in abundance: stringless, white, wax-like and handsome. Seed, similar to a light colored Golden Wax. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

Refugee Wax The stock of our own growing which we offer is much superior to that commonly sold, being very early. Every plant can be depended upon to produce thick, fleshy, round, wax-like pods of fine quality and of a clear, creamy white color, none of the plants being green podded. Seed yellowish drab, heavily splashed with a bluish black. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

If beans are ordered by mail or express prepaid add 10 cents per pint, 15 cents per quart for charges,

#### BEANS-DWARF, BUSH OR SNAP WAX PODDED SORTS—Continued

D. M. Ferry & Co's Detroit Wax Vines very hardy, growing. Pods straight, broad and flat, and as nearly rust proof as any wax bean. Seed white with more or less irregular dark brown or black markings about the eye. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

Prolific German Wax, Black Seeded

of the old black wax or butter bean and is much better in every
respect. Vines medium sized, very vigorous and hardy. Pods medium length, borne well up from the ground, curved, cylindrical,
fleshy and of a clear, creamy white color and remain a long time in
condition for use as snaps. Seed small, oblong, jet black. Pkt. 10c;
Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$7.50

This comparatively new wax podded bean is

Pencil Pod Wax

Pencil Pod Wax

This comparatively new wax podded bean is particularly handsome, also medium early, hardy and very prolific. Pods are long, straight, round, fleshy and of a bright yellow color; tender, absolutely stringless and of excellent quality, they are produced during a long season. Seed long, round, medium size; color solid black. Pkt. 10c; Pt.25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$7.50

Round Pod Kidney Wax

This variety is exceedingly handsome and very desirable, especially for the home garden. Vine dwarf, spreading and very productive. Pods are long, slightly curved, light yellow, wax-like, stringless and of the best quality. They are uniformly perfect, an ill shaped one being rarely seen. Seed long, cylindrical, nearly white with a little dark marking about the eye. Pkt. 10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$7.50

It has been desired.

Currie's Rust Proof Wax It has been claimed that this variety is absolutely rust proof and we have found it, like the Detroit Wax, as nearly rust proof

as any good wax podded bean can be. Vine very vigorous, hardy and productive. Pods similar in shape to Golden Wax. Seed similar in snape to Golden Wax. Seed kidney shaped, purplish black. Pkt. 10c; Pt. 25c; Qt.35c;4Qts.\$1.25; Bu. \$7.00

This variety, ma-turing a little later than the Golden Wax, yields a large crop of long, near-ly straight, broad, creamy white, handsome pods. These are of good quality and

PENCIL POD WAX BEAN always command a ready sale, making the variety one of the most profitable for the market gardener. Seed large, kidney shaped, white with dark markings about the eye. Pkt. 10c;

shaped, white with dark markings about the eye. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

Davis Wax very hardy and productive. Vine rustless and yellow, straight and handsome and when young are crisp and tender. Seed kidney shaped, clear white and excellent for baking. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

Scarlet Flageolet Wax and is a favorite with many truck farmers. The vines are large, strong growing, erect and produce very long, flat, rather coarse, but beautiful wax-like pods which, though often curved and twisted, are always handsome. Seed large, and Pkt. 10c; Pt. 20c; Qt. 30c; 4 Qts. \$1.00; Bu. \$6.00

Violet Flageolet Wax

Wax

Note of the Scarlet Flageolet Wax

Wax

Note of the Scarlet Flageolet Wax

When well grown it is one of the most showy of wax beans. Seed large, dark violet. Pkt. 10c;

Pt. 20c; Qt. 30c; 4 Qts. \$1.00; Bu. \$6.00

Vine exceedingly vigorous, hardy and productive. Pods clear creamy white, very long, straight or slightly curved, flat but fleshy, quite stringless and of very good quality, matures its crop late. Seed long, cylindrical, uniform in shape; color light yellowish brown heavily splashed with dull crimson. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

Crystal White Wax

Distinct but not strictly a wax very productive. Pods greenish white, short, curved, round or thicker than wide, with crease in the back; very fleshy and brittle. Very desirable for pickles. Seed small, oval, white. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

add 10 cents per pint, 15 cents per quart for charges.

WARDWELL'S KIDNEY WAX

If beans are ordered by mail or express prepaid add 10 cents per pint, 15 cents per quart for charges.

#### BEANS-DWARF, BUSH OR SNAP GREEN PODDED SORTS

Extra Early Refugee podded sort furnishing oval, fleshy pods of fine quality. Vines a little smaller, more upright, and leaves a little larger than those of the late Refugee; seed much the same in shape and color. Our stock is uniform, the vines ripening pods well together and long before those of the Refugee or Thousand to One. Seed long, drab, nearly covered with dark purple blotches. Pkt. 10c; Pt. 25c. Ot 35c. Ot 35c. 4 Ots \$1.25. Ru. \$7.00 Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

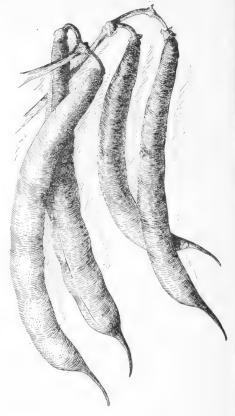

Round Yellow Six Weeks, not differ from the Improved Round Pod Early Yellow Kidney Six appearance of the vine. pods are shorter, much thicker, fleshier and mature earlier. Seed round, light yellow with slightly darker marking about the eye. Pkt. 10c; Pt. 25c; Ot 35: 4 Ots 51:25. Ry. 56:75 Qt. 35c; 4 Qts. \$1.25; Bu. \$6.75

Early Yellow Kidney Six Weeks Vines large, vigorous, branching and very erect and quite productive, with large leaves; pods long

straight, flat, handsome and when young are of good quality; seedlong.kidney shaped light yellow with darker marks about Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$6.75

#### Early Mohawk

This sort is so much hardier than the others that planted earli-er and often furnish beans fit for use before

EXTRA EARLY ROUND POD RED VALENTINE

any other kind. Vines large, stout, with large coarse leaves; pods long, straight, coarse, fat, with long tapering points; seed long, kidney shaped, variegated with drab, purple and brown. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

Black Valentine A very hardy and productive green podded sort with strong, vigorous vine. Pods rather flat but very handsome, much longer, straighter, less fleshy than the Red Valentine, the plant a little more spreading, and in season a little later. A large crop can be depended on and the product makes a very attractive appearance on the market. Seed black, oblong, slightly flattened. Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Bu. \$8.50

Extra Early Round Pod Red Valentine for snaps nothing superior to this variety among the green podded sorts and many prefer it to the wax varieties. Vine erect, with dark green leares; pods medium length, curved, cylindrical, with crease in back, very fleshy, crisp and tender; seed long, of medium size and unsymmetrical in shape, pink marbled with red. Lack of symmetry in the seed of this variety is an indication of superior fleshiness and good quality in the pods. We know of no stock of Red Valentine which can be compared with that we offer in uniformly high quality of pod. We have carefully tested both in trials and in large fields many different strains of Valentine offered under slightly varying names, each claiming to be a great and distinct improvement and have found none that compared with our stock which combines in the highest degree all the good qualities of the sort. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

Longfellow

A very productive, early, green podded bean. Pods round, about six inches long, medium light green in color; tender, of excellent quality and quite stringless when young. One of the most attractive market sorts. Seed of medium size, cylindrical in shape, pink marbled with purplish red. Pkt. 10c;

Bu. \$5.75

BEANS-DWARF, BUSH OR SNAP

GREEN PODDED SORTS—Continued

Stringless Green Pod A most valuable addition to our green podded sorts. The vine is vigorous, spreading and productive. The pods are larger than those of the Red Valentine but are quite as fleshy, of equally high quality and remain crisp and tender longer. They mature a little later: seed yellowish brown. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

Giant Stringless Green Pod An exceedingly productive and mature a few days later than those of Stringless Green Pod, are a little longer and more nearly straight. The quality is very good. Leaves small and light green. Seed long, slender, yellow. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

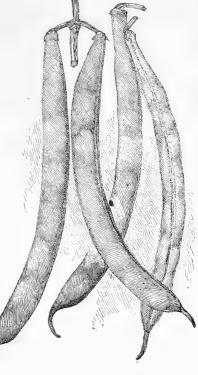

TENNESSEE GREEN POD

small and light green. Seed long, slender, yellow. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

Tennessee Green Pod paratively new to the seed trade, has for several years been grown in the south and wherever known is spoken of in terms of highest praise. Vine prolific, foliage dark green, with leaves large an 1 crumpled; pods very long, flat, irregular in shape, bright green and of most excellent quality. Seed of medium size, oval, flat, yellowish brown in color. After careful selection we have developed a uniformly true stock of the variety which is giving splendid satisfaction. Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Bu. \$8.50

Dwarf Horticultural with large leaves. Pods medium length, cylindrical, curved, with splashes of bright red on a yellowish ground. They become fit for use as green shelled beans very early and in this condition the beans are very large, easily shelled and are about equal to the Lima in quality. Seed large, oval, plump, flesh colored and nearly covered with splashes of bright red. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$6.75

REFUGEE, OR THOUSAND TO ONE

Refugee, or Thousand to One Spreading, exceedingly hardy, with small, smooth leaves; very productive, highly esteemed for late planting and for canning and pickling. Pods long, cylindrical, green becoming white, streaked with purple as they mature; of good quality as snaps. Seed long, light drab, thickly dotted and splashed with purple. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu.\$7.00

The following four Bush or Snap sorts are also extensively planted as field beans.

Early Marrow Pea, or Dwarf White Navy
A variety developed in western New York. Is a sure cropper
and not only more prolific than the common white bean but
also of better quality. Vine large, spreading, with small, thin
leaves and occasional runners, ripening its crop early and all
at once. Pods straight, short, small, but usually containing
six beans; beans small, oval, white, handsome and of superior
quality. Pkt. 10c; Pt. 15c; Qt. 20c; 4 Qts. 60c; Bu. \$3.75

Vineless Marrow A splendid bean for field culture, but compact and without runners, bearing its crop in the center and well up from the ground. The dry beans are very large, very white, cook quickly and are of exceptionally good quality. A wonderfully prolific and valuable sort. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$4.00

Large White Marrow, or Mountain large, slender, spreading, with short runners and small leaves; very prolific; pods broad, green, changing to yellow; seed large, ovoid, clear white, cooking very dry and mealy. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$4.00

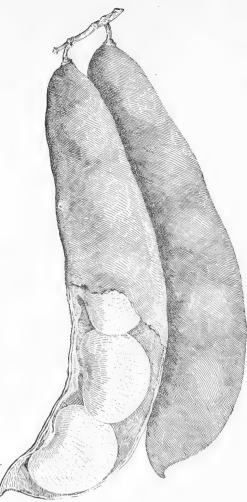

Royal Dwarf Kidney

Plant upright, very large, broad leaves; pods rather late in maturing, medium sized, dark green, coarse; seed large, white, kidney shaped, slightly flattened and of excellent quality, green or dry.

Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$4.50

If beans are ordered by mail or express prepaid add 10 cents per pint, 15 cents per quart for charges.

#### BEANS-DWARF LIMAS

fasten to top wire.

White Crease Back This variety is especially earliness and its habit of perfecting all of its pods within a short time. Vines small to medium, but vigorous and in good soil wonderfully productive, bearing round, fleshy pods in clusters of from four to twelve. Pods medium length, silvery green, of the best quality as snaps and stand shipping better than most sorts. The beans are too small to be of much value when shelled green, but are of very superior quality baked. Seed small, oval, white and very hard. The stocks we offer are much more even than many on the market, and we are confident they are such as will please the most critical growers. Pkt. 10c; such as will please the most critical growers. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

This comparatively new class of Limas cannot be recommended too highly. The beans can be grown and gathered much more easily than the pole Limas as the dwarf varieties require no poles or other support for the vines. The dwarf sorts are very desirable also where garden space is limited as the vines can be grown closer together than those of any pole variety. The quality of the dwarf Limas is fully equal to the pole sorts and as a rule are in condition for use earlier in the season. Every home garden should have at least one planting of them.

(HENDERSON'S) Bush Lima, or Dwarf Sieva dwarf form of the Small Lima, valuable on that account, and because of its extreme earliness. Vines are without runners but continue to grow and set pods until stopped by frost. Leaves small to grow and set pods until stopped by frost. Leaves small and very dark green; borne in clusters and often above the foliage; pods short, flat and containing two to four beans which are of excellent quality either green shelled or dry. Seed small, flat and white. Pkt. 10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$7.50

Burpee's Improved Bush Lima the earliest maturing of the large seeded lima beans. Vine vigorous and productive. Pods very large, thick and containing usually four beans, which are unusually thick, of largest size and of excellent quality. The seed usually shows a greenish white color which is generally considered an indication of superior quality. One of the best lima beans yet introduced. Pkt. 10c; Pt. 35c; Qt. 60c; 4 Qts. \$2.00; Bu. \$12.00 Bu. \$12.00

Dwarf Large White Lima true Large White Plants uniformly A bush form of the Lima and of equally good quality. Plants uniformly dwarf, but enormously productive. Pods as large as those of the pole variety and contain from three to five very large, flat beans of the best quality. Seed of medium size, flat, white. Pkt. 10c; Pt. 25c; Qt 40c; 4 Qts. \$1.50; Bu. \$8.00

Fordhook Bush Lima of the Kumerle type. The plant is vigorous and erect growing, bearing well above the ground. The pods are produced in large clusters, each containing three to five large beans of exceptionally fine quality. Much more productive than Kumerle and matures earlier. We consider this a decided acquisition to the dwarf Limas, possibly the best of the class. Pkt. 10c; Pt. 35c; Qt. 55c; 4 Qts. \$2.00; Bu. \$11.00

Kumerle Bush Lima

A dwarf form of the Challenger bush having the same thick pods and large, thick beans which have made the Challenger so popular. The plant, while fully as dwarf, is hardier and matures its crop at about the same time as the Dwarf Large White Lima. Many consider this sort the best of the Dwarf Limas. Pkt. 10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$8.00

#### POLE, OR RUNNING

Pole Beans are even more sensitive to cold and wet, as well as to droughts and hot winds, than the dwarf varieties, but are of superior quality and productiveness. After settled warm weather, set poles four to eight feet long in rows four feet apart and extending north and south, the poles being three feet apart in the row. Let the poles slant slightly toward the north. Set in this way the vines seen. Around each stake plant five to eight beans two nehes deep. When well started thin to four plants, and see that they all climb around the pole in the same way, for they will not grow if tied up in the opposite direction. Another plan is to plant in rows thickly enough so that there will be one plant to eight or ten inches. Set posts five made of 2x2 lumber at intervals of about sixteen feet along the posts along each row, and fasten it to the tops of the stakes with wire staples. Run a lighter wire or twine along the bottom about six inches from the ground and fasten to the posts and stakes with wire staples. Between these two stretch a wire or twine wherever there is a plant. The vines will run up these until they reach the top wire, when they will care for themselves. Another way is to omit the bottom wire and stick small stakes two to six inches in the soil and fasten to top wire.

Kentucky Wonder This splendid variety, introbeen offered as Seek-No-Further and was introduced in 1891 as a novelty under the name of Old Homestead. An early very prolife sort, with showy pods which are most excellent for snaps. Vine vigorous, climbing well and very productive, bearing its pods in large clusters. Pods green, very long, often reaching nine or ten inches, nearly round and very crisp when young, becoming very irregular and spongy as the beans ripen. Seed long, oval, dun colored. The variety is, we believe, the most practically useful of the green podded pole beans suitable for use as snaps. For several years past our sales have been limited only by the quantity we were able to produce. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

If beans are ordered by mail or express prepaid add 10 cents per pint, 15 cents per quart for charges.

#### BEANS—POLE, OR RUNNING—Continued

St. Louis Perfection White seeded pole bean, very desirable for snaps and certainly unsurpassed green shelled. View strable for snaps and certainly unsurpassed green shelled. Vine vigorous and very productive. Pods round, very long, irregular in shape and quite stringless. The beans when shelled green are large, very tender and white, a very desirable feature when comparison is made with the colored beans of other varieties of this class. Many of the most successful gardeners about St. Louis consider this bean by far the most desirable pole bean yet offered. (See cut in Supplement, page 6) Pkt. 10c; Pt. 30c; Qt. 50c; 4 Qts. \$1.75; Pk. \$3.00

Red Speckled Cut Short, or Corn Hill An old variety, very popular in the central and southern states for planting among corn. It will give a good crop without the use of poles. Vines medium sized, but vigorous, twining loosely with dark colored leaves; pods short, fleshy and of good quality. Seed nearly oblong, cut off diagonally at the ends, dull white, covered at one end and slightly over the whole surface with reddish brown dots. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$6.50

4 Qts. \$1.25; Bu. \$6.50

Dutch Case Knife
so may be used for a corn hill bean. Leaves large, crumpled; pods very long, flat, irregular, green, but becoming creamy white as they mature. Seed broad, kidney shaped, flat, clear white and of excellent quality whether used green or dry. Pkt. 10c; Pt. 20c; Qt. 30c;

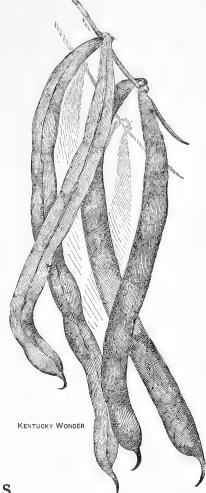

4 Qts. \$1.00; Bu. \$6.00

**Kentucky Wonder Wax** A vigorous growing, wax podded for pole bean similar, aside from color of pod, to the green podded Kentucky Wonder. Pods very long, broad, very fleshy and quite stringless as snaps, while for green shells later in the season the pods are well filled with large beans of delicious flavor. Its earliness and hardiness commend it as a pole bean well adapted even for northern latitudes. Its very large, golden yellow pods are certainly handsome in appearance and are unexcelled in quality by any wax podded bean of its class. (See cut in Supplement, page 6) Pkt. 10c; Pt. 30c; Qt. 50c; 4 Qts. \$1.75; Bu. \$10.90.

Early Golden Cluster Wax A well known early and very beautiful sort. Vines large, strong growing, vigorous, hardy; leaves large, light green, crimped; pods six to eight inches long, borne in abundant clusters, each containing from three to six pods varying in color from golden yellow to creamy white. Pods very broad, but quite thick and fleshy, deeply creased along the edge to which the beans are attached, of the very best quality and stay in condition for use a long time. Seed flattened, oval, dull white in color. Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Bu. \$9.00

London Horticultural, or large, light colored leaves. Pods Speckled Cranberry short, broad, pale green, streaked with brightred as they mature. Beans large, ovate, flesh colored, splashed and spotted with wine-red and of the highest quality, either green or dry. Many like this variety better than the Limas. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

Lazy Wife One of the best of the later green podded pole beans for snaps. The pods, borne in large clusters, are five to seven inches long, broad, thick, fleshy and entirely stringless. When young they have a rich, buttery flavor which is retained until they are nearly ripe. The dry beans are excellent for winter use. Seed white. Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Bu. \$8.75

POLE LIMAS

Seibert's Early Lima Introduced by us in 1895. In earliness, ease of shelling, size, beauty and quality of the green beans, this variety is far in advance of all other early Limas for either the garden or market. The vine is very productive and continues so from the very first to the last of the season; so that although the pods rarely contain more than four beans the total yield is enormous. The green shelled beans are very large, very tender and of finest quality. The beans shrink in drying so that the seed is about the size of the Large White Lima. Pkt. 10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$7.50

Small White Lima, Vines vigorous, with many short branches, so that they Carolina or Sieva are sometimes grown without are sometimes grown without tive, with small, smooth, dark green leaves. Pods curved, short, flat. Seed white, small and flat. Pkt. 10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$7.50

Ideal Pole Lima

The vine is unusually vigorous in growth and is very productive, bearing large clusters of broad pods each six to eight inches long, and containing four to six large beans of most excellent quality. While the variety matures a little later than Seibert's Early Lima, the pods are much larger and no Lima grown is more attractive in appearance. A splendid acquisition for market gardeners. Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Bu. \$8.50

King of the Garden Lima

Vines very vigorous and productive.

Pods very long, filled with four or five immense white beans of the finest quality. On account of its large pods it is a favorite with market gardeners. It will come into bearing sooner and will make larger pods if not more than two vines are left to grow on a pole. Pkt. 10c;

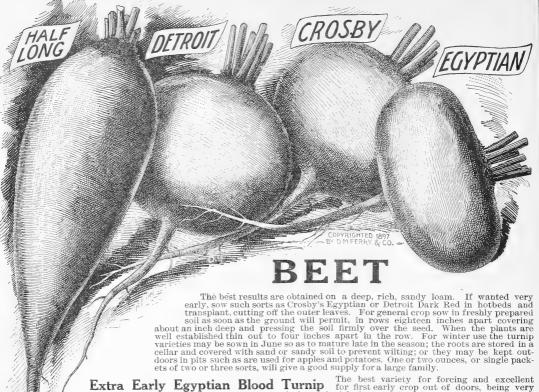

Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$7.50 Vines very vigorous

Carpinteria Pole Lima Vine strong, of vigorous growth, producing an abundance of fine, large pods usually closely filled with four beans of largest size and much thicker than the average pole lima. Color distinctive in having a decided greenish tint, an indication of fine quality. When cooked the beans are very thin skinned, extremely tender and of exceptionally fine flavor. A splendid bean for the home and market garden. (See cut in Supplement, page 4) Pkt. 15c; Pt. 45c; Qt. 75c; 4 Qts. \$2.75

Too late for the extreme north Large White Lima Too late for the extreme north and is being supplanted by Seibert's Early Lima, because the latter is earlier. Vine tall growing, vigorous, but slender; leaves medium sized, smooth, light green, pods borne in clusters, long, broad, very thin, dark green; seed large, ovoid, flat, greenish white. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

Challenger Lima · Vines stout, vigorous and productive. Pods much thicker than those of the other Limas and contain four to five beans which are large, thick, white and of the best quality. One of the most popular of the later varieties with the New York market gardeners. Similar to, but better than Dreer's Improved Lima. Pkt. 10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$7.50

If beans are ordered by mail or express prepaid add 10 cents per pint, 15 cents per quart for charges.

Extra Early Egyptian Blood Turnip
early, with small top. Leaf stem and veins dark red, rounded on top but flat beneath, with very small tap root; flesh dark red, zoned with lighter shade; hard, crisp and tender when young. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ¼ Lb. 25c; Lb. 75c.

Crosby's Egyptian The name of this variety is misleading, as it resembles the Egyptian only in its extreme earliness. The stock we offer is of a distinct vermilion color which is very attractive not only in the beets as pulled, but after they have been cooked. They are also more spherical than the Extra Early Egyptian and we think of better quality. One of the best for early planting out of doors. It becomes fit for use sooner than any other variety but it is not as well suited as the Egyptian for forcing in hotbeds or for transplanting. Pkt. 5c; Oz.10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 80c.

Detroit Dark Red Turnip

Long experience has shown this variety of our introduction to be the best deep red turnip beet, not only for market gardeners, but for home use. It is also by far the best for canning, making a strikingly handsome product, much superior to that obtained from any other variety. Its small top, early maturing and the splendid shape and color of the root make it popular with every one who plants it. Top small, upright growing, so that the rows may be close together: leaf stem and veins dark red, blade green; root globular or ovoid and very smooth; color of skin dark blood red; flesh deep vermilion red, zoned with a darker shade, very crisp, tender and sweet and remaining so for a long time. We believe that the stock of this variety which we offer will produce a crop more uniform in shape, color and quality than any other beet seed obtainable. Pkt. 5c; Oz. 10c; 2 Oz.15c; % Lb. 25c; Lb. 80c.

Early Eclipse
A very early maturing beet especially desirable for the home garden.
Top of medium size. Root nearly globular, with a small tap and small collar. Flesh bright red, zoned with white, very sweet, crisp and tender, especially when young.
Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c.

Edmand's Early Top small, spreading; ribs and leaf stalks dark red; blade of leaf bright green, with wavy edge; root dark red, interior color purplish red with little zoning; crisp, tender, sweet and an excellent keeper. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c.

Early Blood Turnip (Improved) An extra selected stock of Blood Turnip nip, having larger, coarser top and root than the Detroit Dark Red and requiring a considerably longer time to mature. Excellent for summer and autumn use. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 70c.

Bastian's Early Blood Turnip Top small, stem leaf bright green; root with medium sized tap, turnip shaped, bright red. Flesh light purplish red, zoned with white; crisp, tender, very sweet and of good quality. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 70c.

Dewing's Blood Turnip

Top medium sized; leaf stem and veins dark red; leaf green; root dark red, turnip shaped with a moderately large tap. Flesh carmine-red, zoned with lighter shade; tender, sweet and a good keeper. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 70c.

Early Turnip Bassano Top large; leaf stems green; root large, round, turnip shaped; flesh pink, zoned with white; very sweet and tender when young. An excellent sort to plant for use as greens. Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 70c.

D. M. Ferry & Co's This is an entirely distinct Half Long Blood by far the best for winter and spring use. The root is deep red, very symmetrical, two or three times as long as thick and always smooth and handsome. The flesh is rich, dark red, very sweet, crisp and tender, never becoming woody even in portions above the ground. Excellent to slice for pickles. It retains its good quality longer than other sorts. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 80c.

Long Dark Blood

A standard late variety keeping well through the winter.

It is of good size, long, smooth, growing half out of the ground, with few or no side roots. Skin dark purple, almost black: flesh dark red, very tender and sweet.

Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 70c.

Swiss Chard, or Sea Kale Beet although little known in America, is worthy of a place in every garden. The leaf and the leaf stems are the parts used and they are much superior to those of other beets to use as greens. Later in the season the broad, flat, beautiful, wax-like leaf stems are cooked as a salad or pickled. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 65c.

#### SUGAR

Sugar Beets are desirable not only for the manufacture of sugar, but are invaluable for stock feeding and table use. The best soil is a rich, friable sandy, or clayey loam. Rich, mucky soils will often give an immense yield of roots which, though excellent for feed, are of little value for sugar making. Plant in drills two feet apart, twelve to twenty seeds to the foot. The seed should be well covered with one inch of soil pressed firmly over it. Cultivate frequently. When about three inches high thin sixt to inches apart six to ten inches apart.

#### BEETS FOR SUGAR MAKING

Jaensch's Victrix

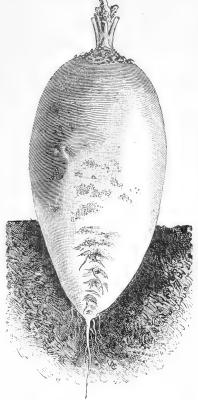

Unquestionably the most highly developed strain of beet. Roots of medium size and very uniform in type. Exceptionally rich in sugar content, and most valuable for sugar making. We have been appointed sole agents for the sale of Jaensch's Victrix in America. Per Lb. 40c, postpaid. Lots of 5 Lbs. to 25 Lbs. by express, at purchaser's expense, 25c per Lb. Vilmorin's Improved it will do better on new lands than any other, suffer less from an excess of nitrogen and will keep the best. Size medium; yielding from ten to sixteen tons per acre. Pkt. 5c; Oz. 10c; 2 Oz. 10c; 4 Lb. 15c; Lb. 40c.

Klein Wanzleben little hardier and easier grown. Yields from twelve to eighteen tons per acre. Probably the best sort for the experimenter to use. Pkt. 5c; Oz. 10c; 2 Oz. 10c; 4 Lb. 15c; Lb. 40c.

#### SUGAR BEETS FOR STOCK FEEDING

Giant Feeding Sugar Beet, A strain of beets which, while giving nearly as large a yield of or Half Sugar Mangel easily grown and harvested roots as a grown and harvested roots as a much higher nutritive value. The roots are light bronze green, grow partly out of the ground and because of this and their shape the crop can be harvested and stored easily and at less expense than any other root crop. Pkt. 5c; Oz. 10c; 2 Oz. 10c; 4 Lb. 15c; Lb. 40c.

Royal Giant, or A beet of highest nutritive value for Half Sugar Rose feeding. Somewhat growing half out of the ground it is very easily harvested. Quite similar to Giant Feeding Sugar except color of skin which is bright rose above ground, white below. Pkt. 5c; Oz. 10c; 2 Oz. 10c; 4 Lb. 15c; Lb. 40c.

French Yellow Sugar Grows to a large size; root half long, yellow and sweet. Excellent for stock feeding. Pkt. 5c; Oz. 10c; 2 Oz. 10c; ¼ Lb. 15c; Lb. 45c.

#### MANGEL

Long Red A large, long variety grown for stock feeding. The root stands up well above the surface; color light red; flesh white and rose colored. Pkt. 5c; Oz. 10c; 2 Oz. 10c; 4 Lb. 15c; Lb. 40c.

D. M. Ferry & Co's Improved and well formed, comparatively thicker Mammoth Long Red and deeper colored than the common sort and with smaller top. Our stock will produce the largest and finest roots which can be grown and is vastly superior to many strains offered under other many strains offered under other names, such as Norbitan Giant, Colossal, Monarch, etc. Pkt. 5c; Oz. 10c; 2 Oz. 10c; ½ Lb. 15c; Lb. 40c.

Yellow Leviathan Root long, clive shaped, growing over one-half out of the ground; flesh white, sweet and tender: top green, comparatively small; neck small, short. Its fine flesh never becomes woody and its root grows so well out of the ground that the crop is very easily harvested. Stands at the head of the list in yield per acre. Pkt. 5c; Oz. 10c; 2 Oz. 10c; 4 Lb. 15c; Lb. 40c.

Golden Tankard Top comparatively small, with yellow stems and mid-ribs; neck very small, root large, ovoid, but filled out at top and bottom approaching a cylindrical form. Flesh yellow, zoned with white. Pkt. 5c; Oz. 10c; 2 Oz. 10c; 4 Lb. 15c; Lb. 45c.

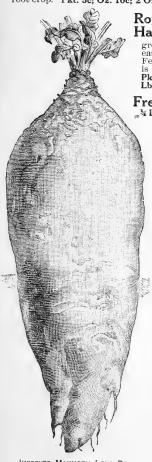

#### **BROCCOLI**

The culture is the same in all essentials as for cauliflower. Broccoli is grown most successfully where the season is long, cool and rather moist. One of the most valuable features is that it withstands greater extremes of temperature than cauliflower.

Early Large White French hardy, vigorous, easily grown sort. The best variety. Heads white, very compact and hard, continuing firm for a long time. A Pkt. 5c; Oz. 40c; 2 Oz. 75c; 4 Lb. \$1.25; Lb. \$4.00

#### **BRUSSELS SPROUTS**

Improved Half Dwarf The plants grow two to three feet high and produce from the sides of the stalk numerous little sprouts which resemble very small cabbages one or two inches in diameter. The leaves should be broken down in the fall to give the little heads more room to grow; very hardy, giving compact, round sprouts of large size and good quality. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.50

IMPROVED MAMMOTH LONG RED MANGEL WURZEL

# CABBAGE

For many years cabbage seed has been a leading specialty with us. Our cabbage seeds are all grown from approved stock seeds which are largely of our own development on our Oakview Stock Seed Farm; they are all grown under our personal inspection and supervision. There is no seed more reliable, nor can any be more implicitly depended upon to give

For Many years caused search and a trading specially which are largely of our own development on our Oakview Stock Seed Farm; they are all grown under our personal inspection and supervision. There is no seed more reliable, nor can any be more implicitly depended upon to give planters uniformly satisfactory results.

The requisites for complete success with cabbage are: First, good seed; in this crop the quality of the seed used is of the greatest importance; no satisfactory results can possibly be obtained when poor seed is planted. Second, rich, well prepared ground. A heavy, moist and rich loam is most suitable. Third, frequent and thorough cultivation. The ground should be highly manured and worked deep. Cabbage is grown all over the country and specific directions regarding the time and methods of planting applicable to all localities cannot be given. In general, north of the 40th parallel the early sorts should be sown very early in hotbeds, hardened off by gradually exposing them to the night air and transplanted as early as the ground is in good condit on, setting eighteen to thirty-six inches apart, according to size of variety. South of the 40th parallel sow about the middle of September, or later according to latitude, transplanting into cold frames if necessary to keep through winter and setting in open ground as early as possible in the spring.

The late autumn and winter varieties may be sown from the middle to the last of spring and transplanted when four to six inches high. If the weather and soil is dry the late sowings should be shaded and watered in order to hasten germination, but it is important that the plants should not be shaded or crowded in the seed bed, or they will run up weak and slender and will not endure transplanting well.

Cabbages should be hoed every week and the ground stirred as they advance in growth, drawing up a little earth to the plants each time until they begin to head, when they should be thoroughly cultivated and left to mature. Loosening the roots will sometimes r

cabbage ramily for a year of two. This is usually an effective remedy.

To preserve cabbages during winter, pull them on a dry day and turn them over on the heads a few hours to drain. Set them out in a cool cellar, or bury them in long trenches in a dry situation, covering with boards or straw so

dry situation, covering with boards or straw so as to keep out frost and rain.

A great many of the varieties of cabbages are simply strains rather than distinct sorts and are really the same as some older and better known kinds. We do not know of a single variety offered in this country which we have not seen, both in trial and in fields, and we are confident that every good quality can be found in a greater degree in the varieties we offer than in any other kinds. any other kinds.

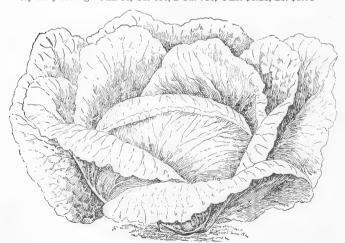

#### FIRST EARLY SORTS

Early Jersey

The earliest and hardest heading of first early cabuses. Most gardeners depend upon it for the bulk of their extra early crop. Its exceeding hardiness not only to resist cold but other unfavorable conditions, insures the greatest likelihood of profitted and crisifon expressible for the countries.

ditions, insures the greatest incention of profitable and satisfactory results. Our stock is grown and selected with the greatest care; there is none better and there are few as good. Head conical, very compact, solid and of excellent quality. The thick, stout leaves and compact habit of the variety make it the best sort for

very early setting Pkt. 5c; Oz. 40c; 2 Oz. 75c; 4 Lb. \$1.25; Lb. \$3.75

EARLY SPRING

EARLY JERSEY WAKEFIELD

A strain in which the Charleston, or Large Wakefield plant is a rg er and a little later than Early Jersey Wakefield, the head being fully as solid but less pointed and considerably larger. Exceedingly hardy and on account of its earliness and size of head with market gardeness and on account or its earliness and size of head with market gardeners and shippers it is deservedly a very popular sort to follow Jersey Wakefield. The seed we offer can be depended on to produce uniformly fine, marketable heads. Pkt. 5c; Oz. 35c; 2 Oz. 60c; ½ Lb. \$1.00; Lb. \$3.50

Early Spring headed variety. A wonderfully compact plant with few outer leaves so that a great number of fine solid heads can be produced on an acre. Although it does not come to full maturity as early as Jersey Wakefield, it becomes solid enough for use about as early and is by far the best early sort for markets that demand a large, flat cabbage. The plant is vigorous, with short stem. The leaves are large, broad, smooth and of distinctive light green color. The head is oval and very large for the size of the plant, nearly equaling many of the later kinds. (Very short crop; sold out) The earliest flat

#### CABBAGE—SECOND EARLY, OR SUMMER SORTS

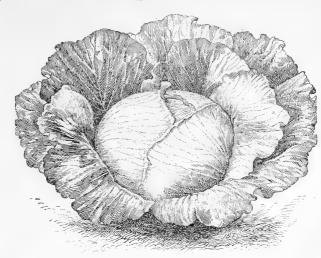

Henderson's bage; plants strong growing Early Summer with large, spreading round, somewhat flattened and keeps longer without bursting than most of the early sorts. Valuable for both family and market. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.25

Early Dwarf

Continued experience confirms our belief that this

Flat Dutch is a most valuable second early
med, upright and having comparatively few
and short leaves, the rows can be set close
together. Head large, oval or nearly round,
solid, crisp and tender, maturing with Early
Summer. Every plant will form a hard head fit
for market and will mature much earlier than
the Late Flat Dutch or other sorts usually
grown for market and shipping. Pkt. 5c;
Oz.30c; 2 Oz.55c; 4 Lb. \$1.00; Lb. \$2.75

All Head Early Our strain of All Head because of close adherence to the type in habit of growth and the shape and quality of the head. Plant more compact, leaf smoother and thicker and head larger and a little more round than the Early Summer. We consider this one of the best second early sorts on our list for both the market and home use. Pkt. 5c; Oz. 30c; 2 Oz. 55c; ½ Lb. \$1.00; Lb. \$2.75

HENDERSON'S EARLY SUMMER

Early Winnigstadt
One of the best for general use, being very hardy and sure to head. Owing to its compact and upright habit of growth and peculiar texture of short thick leaf, the variety seems to suffer less from the cabbage worm than most other sorts. Head regular. conical, very hard and keeps well both summer and winter. It is the hardiest, not only as regards frost, but will suffer less from excessive wet, drought, insects or disease than any other second early sort. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.25

All Seasons One of the earliest of the second early sorts. Head very large, round, often nearly spherical but usually somewhat flattened; very solid and of the best quality, keeping as well as the winter sorts. Plant very vigorous and sure heading; leaves large, smooth with dense bloom. Remarkable for its ability to stand the hot sun and dry weather. Our trial has shown that heads which were fit for market by July 10th were still salable September 10th, the only change being increased size and density. Pkt. 5c; Oz. 30c; 2 Oz. 55c; ½ Lb. \$1.00; Lb. \$2.75

ALL HEAD EARLY

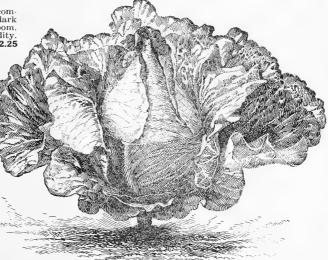

Early Drumhead Plant very hardy, compact with thick, dark green leaves covered with a dense bloom. Head flat, very solid and of good quality. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.25

Fottler's Early In many sections, Drumhead, or particularly in the east, Brunswick this is the most popular cabbage Short Stem grown and it certainly is one of the very best second early sorts in cultivation, especially for the home garden. It keeps well both under the sun and during the winter. Head large

of the very best second early sorts in cultivation, especially for the home garden. It keeps well both under the sun and during the winter. Head large, flat, compact, solid and of fine quality. We have taken pains to have our stock free from the longer stemmed, coarse plants often seen in inferior stocks of this variety. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.25

Succession

A sure keeping variety, long variety, similar to All Seasons but maturing a little later. Heads deep and very firm. Our seed is from carefully grown selected stock. Pkt. 5c; Oz. 30c; 2 Oz. 55c; ½ Lb. \$1.00; Lb. \$3.00

EARLY WINNIGSTADT

#### CABBAGE-LATE, OR AUTUMN AND WINTER SORTS

Surehead

A compact growing, general crop sort, having large thick heads and many outer leaves.

We assure our customers that our stock is the best obtainable and will produce with certainty uniformly large, fine heads

Pkt. 5c; Oz. 25c; 2 Oz. 40c; ½ Lb. 75c; Lb. \$2.25

Louisville Drumhead Strong and vigorous in growth, but not coarse. Plants short stemmed and compact, with broad well rounded, large leaves, very full at base. Head firm, medium sized, slightly flattened, averaging quite deep. Pkt. 5c; Oz. 25c; 2 Oz. 40c; & Lb. 75c; Lb. \$2.25

The Warren, or One of the most desirable for fall and Improved Stone Mason winter use, we offer being much superior to that usually we offer being much superior to that usually sold under this name. Plant medium sized, with only a moderate number of leaves; head large, flattened but very deep, very solid, crisp, tender and well flavored. Gives the greatest satisfaction both to the amateur and market gardener. Pkt. 5c; Oz. 30c; 2 Oz. 55c; ½ Lb. \$1.00; Lb. \$3.00

D. M. Ferry & Co's great pains to develop and maintain the good qualities which have made this sort so popular remarkably uniform in size and type. A thousand plants can be depended upon to produce from nine hundred and fifty to one thousand large, oval, solid heads, of splendid quality, which will keep for a long time in the best condition. By many it is considered the standard, very large, late cabbage. Pkt. 5c; Oz. 25c; 2 Oz. 40c; ½ Lb. 75c; Lb. \$2.25

2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.25

D. M. Ferry & Co's We recommend this sort for Premium Late Drumhead large, deep solid head. ty which in good, rich soil, will grow to a very large size and on poorer soils will give good sized heads which are very compact, solid and of excellent flavor. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.25

Marblehead Mammoth Drumhead good cultivation the heads have averaged thirty pounds each. Plant very large, late in maturing and the seed should be planted earlier than that of most sorts. Pkt. 5c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00

HOLLANDER, OR DANISH BALL HEAD

Hollander, or Danish Ball Head Very hardy, very solid, of fine quality and as one of the very best keepers it is particularly desirable for distant markets or for late spring use. Plant vigorous, compact growing, with longer stem than most American sorts and exceedingly hardy in resisting cold and dry weather; leaves large, thick, bluish green covered with whitish bloom. Head medium sized, round, very solid and stands shipment better than any other late sort. We offer seed of our own growing which, judging from recent trials, will produce more uniformly typical heads than can be grown from the best stock obtainable elsewhere. Pkt. 5c; Oz. 40c; 2 Oz. 75c; ½ Lb. \$1.25; Lb. \$4.00

Green Glazed south, as it is not affected by the heat as much as most sorts. Leaves dark green, very smooth and glossy, and as a rule not injured by worms and insects. Under very favorable conditions this variety forms a fairly firm head, but more often gives only a loose cluster of leaves. Pkt. 5c; Oz. 20c; 2 Oz. 35c; ½ Lb. 60c; Lb. \$1.75

leaves. Pkt. 5c; Oz. 20c; 2 Oz. 35c; 4 Lb. 60c; Lb. \$1.75

Mammoth Rock Red The largest heading red cabbage, much better than stock offered as Red Drumhead. Plant

large, with numerous spreading leaves. Head large, round, very solid and very attractive deep red color. Pkt. 5c; Oz. 30c; 2 Oz. 55c; ½ Lb. \$1.00; Lb. \$2.75

Early Dwarf Ulm Savoy One of the ear-liest and sweet-est of the Savoys. Head round, solid; leavessmall, thick, fleshy, of fine deep green color and excellent quality. Pkt. 5c; Oz. 15c; 2 Oz. 25c; \( \frac{1}{4} \) Lb. 40c; Lb. \( \frac{1}{2} \) Lb. \( \frac{1}{2} \)

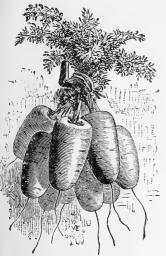

Improved American Savoy The best of the main crop and late savoys for home use or the market. Plants vig-orous, densely crumpled and very sure heading. The heads of this variety The heads of this variety are larger, more solid and better than the sorts offered as Perfection, Green Globe or Drumhead Savoy. Pkt. 5c; Oz. 20c; 2 Oz. 35c; 4 Lb. 60c; Lb. \$1.75

D. M. FERRY & Co's PREMIUM LATE FLAT DUTCH

### CARROT

The carrot is one of the most wholesome and nutritious of our garden roots deserving to be more extensively used for culinary purposes and we urge our readers to give some of the early table sorts a trial. For feeding stock, especially horses and milch cows, the carrot cannot be surpassed and it should be more largely grown by farmers for this purpose. While a sandy loam made rich by manuring the previous year is the best soil for the carrot, any good land if thoroughly and deeply worked will produce satisfactory crops. It is advisable to sow as early in the spring as the ground is fit to work, though good crops may be grown from sowings as late as June 15. For table use sow the smaller kinds early in rows 16 to 18 inches apart. For field culture sow in drills 18 to 24 inches apart, using from one and one-half to three pounds of seed to the acre. Cover one-half to one inch deep and see to it that the soil is pressed firmly above the seed. As soon as the plants appear, use the cultivator or wheel hoe. Thin four to six inches apart in the row. (French

EARLY SCARLET HORN

2 Oz. 15c; ¼ Lb. 25c; Lb. 90c.

¼ Lb. 25c; Lb. 90c.

Half Long Scarlet Nantes, Tops small; roots cylindrical, smooth, Stump Rooted bright orange; flesh orange, becoming yellow in center but with no distinct core. Of the finest quality and one of the most symmetrical and handsome of the medium sized sorts; excellent for the market or home garden. Pkt. 5c; Oz. 10c;

Chantenay tapering slightly but uniformly stump rooted and smooth, color deep orange red; flesh very crisp and tender. Although a medium early sort the roots are suitable for use nearly as early as any. Undoubtedly is one of the best in quality for the market and private garden, while its great productiveness makes it very desirable as a field sort. Pkt. 5c; Oz. 10c; 2 Oz. 15c;

Tops medium sized; necks small; roots

Earliest Short Horn Forcing) One of the earliest varieties in cultiva-tion and very desirable for forcing. Tops small, finely divided; roots nearly round and of reddish orange color. When fully matured about two inches in diameter, but should in diameter, but should be used before fully grown while young and tender. Pkt. 5c; Oz. 10c; 2 Oz. 20c; 4 Lb. 30c; Lb. \$1.00 Early Scarlet
Horn Excellent for
early planting
out of doors. Tops small, coarsely divided; roots top shaped but tapering abruptly to a small tap; skin orange red. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 90c.

Early Half Long

Scarlet Carentan

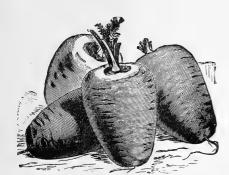

The tops are very small, roots cylindrical with remarkably small necks. Handsome deep orange

Guerande, or Ox Heart

Tops small for the size of the roots which are comparatively short but often reach a diameter of five inches, terminating abruptly in a small tap root. Flesh bright orange, fine grained and sweet. This variety is especially desirable for soil so hard and stiff that longer rooted sorts would not thrive in it. When young the roots are excellent for table use and when mature are equally good for stock. Pkt, 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 90c.

A half long orange carrot, grown largely on account of its great productiveness and adaptability to all classes of soil. Tops of medium size, coarsely divided. The roots are smooth and handsome, deep orange and of medium length, tapering uniformly to a blunt point; flesh sweet, crisp, tender and of a deep orange color. Although the roots of this variety are short they produce as large a bulk as the longer field sorts and are more easily harvested. Pkt. 5c. Oz. 10c; 2 Oz. 20c; 4 Lb. 30c; Lb. \$1.00

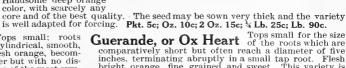

This is Improved Long a decid-Orange ed improvement obtained by years of careful selection of the best careful selection of the best formed and deepest colored roots of the old Long Orange. The most popular of the older sorts for farm use on deep and mellow soil. Roots dis-tinctly larger at cryan short. tinctly larger at crown, shorter, thicker and smoother than those of Long Orange, but so uniform and true to type that the bulk of the crop will be greater. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ¼ Lb. 25c;

QUERANDE, OR OX HEART

Lb. 80c. D. M. Ferry & Co's we think this distinct variety is destined to take first rank as a field carrot, owing to its enormous productiveness and the ease with which it can be harvested. Roots half long, smooth, very heavy at the below; flesh white, solid, crisp and of excellent quality. This variety is a real acquisition as a heavy yielding, easily harvested, white carrot and is the best of this class. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 60c. We think this distinct variety is destined to take first

DANVERS

# **CAULIFLOWER**

The Cauliflower, although one of the most delicious vegetables, is but little grown except by professional gardeners because of the erroneous notion that it is so difficult to grow that only skilled gardeners can produce it. Any one will be reasonably certain of success with this most desirable vegetable if he carefully follows the cultural directions given below.

reasonably certain of success with this most desirable vegetable if he carefully follows the cultural directions given below. For spring and early summer crop, sow in March or early in April in hotbed and transplant to cold frame when sufficiently large to handle. As soon as danger of hard freezing is over set in the open ground in rows two and one-half feet apart and eighteen inches apart in the row. The plants will endure a light frost. The soil for cauliflower should be like that for cabbage, but it is better if made richer than is ordinarily used for that crop. Plenty of good manure must be well incorporated with the soil and the latter be brought into the highest state of tilth. No application, however, can be more necessary or more useful than that of cultivator and hoe. For late crop, sow at same time as for late cabbage and treat in the same manner. It should be borne in mind that cauliflower will not head up well in hot, dry weather and hence the sowings need to be so timed as to bring the heads to maturity either before the hot summer weather sets in or not until the cooler weather of the fall. If it receive at this time a liberal supply of water, the size and quality of the heads will be greatly improved. After the head begins to form, draw the leaves over and tie them together to protect it from the sun and to keep it white. The heads should be cut for use while the "curd" is compact and hard, as they soon become much impaired in quality and appearance after they open and separate into branches. Of the enemies of the crop, none is more formidable than the cabbage root maggot. This seems to have a special liking for the cauliflower. Probably the best and most surely effective protective measure is enveloping each plant with a tight fitting collar of tarred felt. Plant lice are anoth-

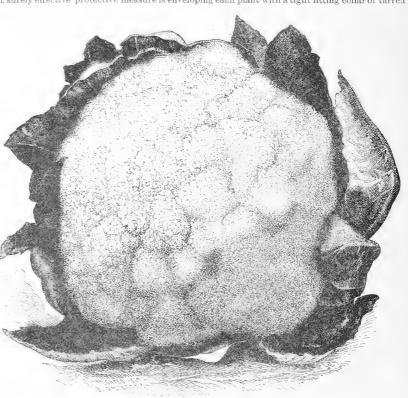

felt. Plant lice are another serious pest of this crop. Effective remedies are dusting with fine tobacco dust, or spraying with strong tobacco tea or kerosene emulsion.

Our cauliflower trials for several years included samples of seeds from some of the most skillful American growers and while their stocks produced hardy, vigorous plants the heads formed were uniformly more open in the curd and matured a little later than those grown from the best imported seed. All the cauliflower seed we offer is produced by the most experienced growers in Europe, is such localities as are best suited to its proper development and the greatest care is taken to save seed from perfectly developed plants only.

Early the earliest Snowball maturing strain of the true short leaved Snowball type of cauliflower. Admirably adapted for forcing or wintering over for early crop and the most popular sort for these purposes, also one of the best sorts for late summer and fall crop. The plants are compact, with few narrow, upright leaves and are well suited for close planting. The heads are of medium

size, solid, compact, round, very white and curd-like and are developed earlier than those of any other sort. In our recent comparative trials of samples from the best known growers and prominent seedsmen in Europe and America our stocks of Early Snowball were unsurpassed by any in earliness. They also gave the highest percentage of well formed heads. After a careful inspection of the fields of the most expert Danish and other European growers we know we are in position to supply the most critical trade with seed which can be depended upon as the very best. Pkt. 25c; 4 Oz. 75c; Oz. \$2.50; 2 Oz. \$4.75; 4 Lb. \$9.00

Extra Early Dwarf Erfurt heading early Cauliflower. It is of dwarf habit with short outside leaves and is similar in all respects to Early Snowball, and nearly as early. The heads when ready for market are of medium to large size, curd white, exceptionally deep and of finest quality. It will give excellent results either in the home garden or for market use and is superior to most seed sold at higher prices. Where extreme earliness is not the greatest consideration we recommend this strain after having proven it far superior to most stocks offered as Snowball. Pkt. 25c; ½ Oz. 75c; Oz. \$2.25; 2 Oz. \$4.25; ½ Lb. \$8.00

EARLY SNOWBALL

Early Favorite

This is very early, exceedingly hardy, easily grown and perhaps the best sort for the inexperienced grower, as it will head under conditions in which many sorts would fail. The plants are large and form large heads which, although inclined to be open, are crisp, tender and of fine quality. It keeps in condition for use a long time. Many years' experience has convinced us that it is one of the hardiest sorts. Pkt. 5c; Oz. \$1.00; 2 Oz. \$1.50; 4 Lb. \$2.50

Large Algiers
market gardeners.

A valuable late sort, sure to head, of excellent quality and popular with Plant large but of upright growth, uninjured a frost that would ruin most other sorts. One of the very best of the late varieties. Pkt. 5c; Oz. 75c; 2 Oz. \$1.25 \[ \frac{1}{2} \] Lb. \$2.00

Veitch's Autumn Giant
A distinct and valuable late variety with long stems and dark green leaves. The heads are very large, extremely white firm and compact and being well protected by foliage, remain a long time fit for use. The plants should be started and transplanted early in the season to insure their full development. Pkt. 5c; Oz. 40c; 2 Oz. 75c; ¼ Lb. \$1.25

# CELERY

Sow the seed (which is slow to germinate) in shallow boxes indoors or in a finely prepared seed bed out of doors in straight rows so that the small plants may be kept free from weeds. See to it that the seed is not covered too deep and that the bed is kept moist, almost wet, until the seeds germinate, as plenty of moisture is essential to get a satisfactory growth. The seed will not germinate well if planted in a hotbed or where subjected to a temperature above 60° Fr. When the plants are one to two inches high, thin out and transplant so that they may stand three inches apart each way. When they are four inches high, cut off the tops, which will cause the plants to grow stocky.

each way. When they are four inches high, cut off the tops, which will cause the plants to grow stocky.

The crop is usually made to succeed some earlier one, but in order to grow good celery the soil must be made as rich as possible, the essentials to success being very rich soil and plenty of water. If good plants are used, they may be set out as late as the middle of August, but the best results are usually obtained from setting about the middle of June or first of July. The most desirable time will depend upon local climate and is that which will bring the plants to maturity during cool, moist weather. In setting, prepare broad trenches about six inches deep and four to six feet apart, in which the plants should be set six inches apart, cutting off the outer leaves and pressing the soil firmly about the roots. When the plants are nearly full grown they should be "handled" which is done by gathering the leaves together while the earth is drawn about the plant to one-third its height, taking care that none of it falls between the leaves, as it would be likely to cause them to rust or rot. After a few days draw more earth about them and repeat the process every few days until only the tops of the leaves are visible. Or it may be blanched by pressing the leaves together with two wide boards held in place by stakes or by wire hooks at the top. This is the method commonly used by market gardeners, but celery so blanched is more likely to become pithy than that blanched with earth. Care should be taken that the plants are not disturbed while they are wet or the ground is damp; to do so increases the liability to injury from rust.

A part of the crop may be simply "handled" and then at the approach of severe freezing weather taken up and set

A part of the crop may be simply "handled" and then at the approach of severe freezing weather taken up and set out compactly in a dark cellar or an unused cold frame, where the temperature can be kept just above the freezing point and it will then gradually blanch so that it may be used throughout the winter. Should the plants begin to wilt, water the roots without wetting the stalks or leaves and they will revive again.

Celery is sometimes grown by what is termed the new process which consists in making a spot as rich as possible and there setting the plants six to eight inches apart each way. If the soil is very rich and there is an abundance of water, the plants will blanch each other and the product will be very white and handsome, but we think it is inferior in quality to that grown by the old method.

GOLDEN YELLOW SELF BLANCHING

Golden Yellow
Self Blanching
quality and appearance to our stock of Golden Yellow Stock to produce their finest early celery. Plants of a yellowish green color, but as they mature the inner stems and leaves turn a heantiful golden yellow so that blanch. and leaves turn a beautiful golden yellow so that blanching is effected at a minimum expenditure of time and labor. The handsome color, crispness, tenderness, freedom from stringiness, and fine nutty flavor of this variety have fully established it as the standard first early sort. Pkt. 5c; Oz. 60c; 2 Oz. \$1.00; \( \frac{1}{2} \) Lb. \$1.75; Lb. \$6.00

White Plume White ware fully aware that this merit as an early market sort, being as early as any and very attractive when fit for use, we do not think that it compares favorably with the Golden Yellow Self Blanching either in flavor or solidity, or that it will remain in condition for use as long after it is earthed up. Leaves light yellowish green with tips almost white. As the plants mature, the inner stems and leaves turn white and require to be earthed up but a short time before they are in condition for use. An Improved White Plume with longer stems is being offered but careful comparison with our stock shows that it is not equal in quality nor so our stock shows that it is not equal in quality nor so desirable as that we offer. Pkt. 5c; Oz. 30c; 2 Oz. 55c; 4 Lb. \$1.00; Lb. \$3.00

Columbia An early maturing sort unsurpassed in shape and quality. The plant is of medium height but very stocky and heavy. The stalks are thick, almost round, resembling in shape those of Giant Pascal; the color has in it more of the rich yellow tint of Golden Yellow Self Blanching, which variety it resembles very much in appearance when trimmed and bunched for the market. The foliage is of a distinctly light shade of green with a tinge of yellow. In season it follows in close succession Golden Yellow Self Blanching. Its quality is certainly exceptionally fine, some connoisseurs considering it equal or even superior to either Golden Yellow Self Blanching or Giant Pascal. Pkt. 5c; Oz. 75c; 2 Oz. \$1.25; % 1b. \$2.00; Lb. \$7.00 ¼ Lb. \$2.00; Lb. \$7.00

Dwarf White Solid

An erect, compact growing variety. Stalks moderately thick and distinctly ribbed, solid, crisp and of excellent quality. This variety is also solid as Large Ribbed Kalamazoo and Kalamazoo. Pkt. 5c; Oz. 20c; 2 Oz. 35c; 4 Lb. 60c; Lb. \$2.00

Seymour's White Solid A large sized, vigorous white, round, very crisp, perfectly solid and of superior flavor. Matures a little earlier than Giant Pascal. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.50

Giant Pascal

This is a green leaved variety developed from the Golden Yellow Self Blanching and we recommend it as being of the very best quality for fall and early winter use. It blanches to a beautiful yellowish white color; is very solid and crisp and of a fine nutty flavor. The stalk is very thick, the upper portion nearly round but broadening and flattening toward the base. With high culture this variety will give splendid satisfaction as a large growing sort for fall and winter use. In the south it is prized more than almost any other kind. Pkt 5c. 0z. 25c. 20z. 40c. 3 Lh. 35c. 1lh. \$2.50 kind. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.50

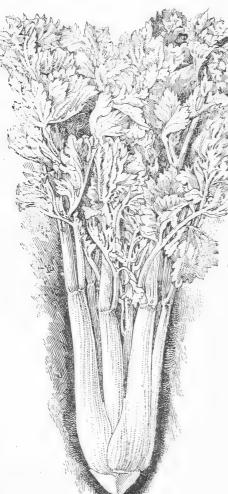

#### CELERY-Continued

Evans' Triumph We consider this the best in quality produces a very strong and vigorous plant with large very white, crisp, tender and finely flavored stalks. It is late and requires the whole season to develop but will keep well for a long time and has proven to be a very popular late variety. When properly grown a dozen plants trimmed for market will weigh nearly twice as much as the same number of some smaller and earlier sorts. Pkt. 5c; Oz. 25c; 2 Oz. 40c; ½ Lb. 75c; Lb. \$2.50

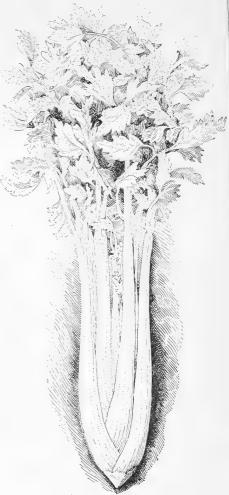

Winter Reliance This very desirable variety is considered the most attractive in color and the best in quality of any of the late keeping sorts. The plant is dwarf growing, compact, with solid heart and habit of growth very well adapted for late keeping. When ready for the late market the color is a light creamy yellow, very handsome. Its quality is unsurpassed by that of any variety of its class and is decidedly superior to most of the older, long keeping sorts. Pkt. 5c; Oz. 50c; 2 Oz. 85c; ½ Lb. \$1.50; Lb. \$5.00

French's Success

Keeps the best of any celery yet introduced. Growth compact and short in stem so that plants may be well earthed up for blanching while growing close together. Foliage dark green; heart large, solid and formed early; stalks white, thick, yet brittle, without stringiness and of good quality. It requires more time to mature than some sorts but remains firm, solid and in perfect condition until late in the spring. (Crop failed)

COLUMBIA

WINTER RELIANCE

Soup, or Cutting Celery

This variety is not suitable for blanching but is sown thick in rows and the tops are cut when three or four inches high for use as soup flavoring. The tops grow very rapidly and furnish a succession of cuttings throughout the season. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

CELERY SEED FOR FLAVORING. Oz. 10c; 2 Oz. 10c; 4 Lb. 15c; Lb. 30c.

CELERIAC, or Turnip Rooted Celery

Sow the seed at the same season and give the same treatment as common celery. Transplant the young plants to moist, rich soil, in rows two feet apart and six inches apart in the row. Give thorough culture. As the roots are the edible portion of this vegetable, it is not necessary to earth up or "handle" it. After the roots have attained a diameter of two inches or over, they are fit for use. To keep through winter pack in damp earth or sand and put in the cellar or leave out of doors, covering with earth and straw like beets and carrots.

Large Smooth Prague nearly round roots which have comparatively few side roots. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.50

#### **CHERVIL**

Used for flavoring and garnishing dishes of meats and vegetables. The leaves are ready for use in six to ten weeks from sowing the seed. Sow in early spring in rich, well prepared soil and when plants are well established transplant to about one foot apart.

Curled Even more beautiful than parsley and greatly superior to the old, plain variety, being earlier, more handsome and having fully as fine fragrance and flavor. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

CHICORY—Large Rooted, or Coffee

Our stock is the improved type, with very much larger, smoother, whiter and proportionately shorter roots than the seed as early in the spring as the ground can be prepared, in a rather light, moderately rich soil, in drills two to two and one-half feet apart for either garden or field culture. When the plants are sufficiently large, thin to six inches apart in the row. Cultivate well and in the fall dig the roots, slice them and dry in an apple evaporator or kiln constructed for the purpose. When the roots are grown in quantity for the manufacturers of "prepared" chicory, they are usually brought to the factory in the "green" state and there dried in kilns constructed specially for the purpose. Pkt. 5c; Oz. 10c; 2 Oz. 20c; 4 Lb. 30c; Lb. \$1.00

CHIVES—Allium Schoenoprasum

An onion-like plant used as a salad and for flavoring soups. Also, the plant makes an excellent ornamental garden bed edging for about three years. Pkt. 10c; Oz. 50c.

**COLLARDS** A cabbage or kale-like plant grown throughout the south and known in different sections as the south where it continues in growth and is usable throughout the entire winter.

Georgia, Southern, or Creole head, or a mass of leaves on a tall stem. Freezing does not injure but rather improves the quality. Sow thick in drills, in rich ground, transplanting when four inches high; or sow in drills where the plants are to remain and when well started thin to two or three feet apart in the row. In the south, sow from January to May and from August to October. Pkt. 5c; Oz. 10c; 2 Oz. 20c; 4 Lb. 30c; Lb. \$1.00

# CORN

#### SWEET, OR TABLE VARIETIES

A rich, warm, alluvial soil is the best, but excellent sweet corn can be raised on any good, ordinary soil, if it is deeply and thoroughly worked before planting. In the north sweet corn should be planted as early as can be done without risking great loss from frosts or from rotting of the seed in the soil. Give frequent and thorough but shallow cultivation until the tassels appear.

Mammoth White Cory

One of the largest and best extra early varieties. Stalks about four feet high, each generally bearing two large, finely shaped ears which become fit for use as early as those of any variety in cultivation. They are twelve rowed, six to seven inches long, very symmetrical and handsome, seldom with any opening between the rows at the base. Grain large, broad, very white and of remarkably good quality for such an early sort. The size and beauty of this variety give it ready sale even when the market is overstocked. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$5.00

White Cob Cory
Plants about four and one-half feet high and bear two or even three ears which are six to seven inches long, eight rowed, and with large somewhat coarse but very sweet and tender grain. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$5.00

White Malakhof A handsome, very early sweet corn of splendid quality. Stalks about four feet high; ears about five inches long, twelve rowed, slender but with very small cob which is well filled with small, deep, sweet and tender grains. Follows closely Mammoth White Cory in time of maturing. This variety was developed by the Burean of Plant Industry of the Department of Agriculture through selection of the white grained ears of the Malakhof. (See cut in Supplement, page 8) Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Pk. \$2.50

Oakview Early Market
Stock Seed Farm. Similar in general character to our Mammoth White Cory, but with decidedly longer ears which mature nearly as early. It is of especial value to market gardeners, as in early corn the largest ears usually control the market. Plant about four feet high; ears seven to eight inches long, twelve and fourteen rowed with white square grains. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$5.00

White Mexican An early sweet corn of very rich and excellent flavor. Stalks about four and one-half feet high; ears eight inches long, usually eight rowed; about the same season as Crosby's Early and

ches long, usually eight rowed; about the same season as Crosby's Early and of better quality than any other early variety of equally large size. The variety as offered by us is far superior to some that has been sold under this name. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Pk. \$1.75

Crosby's Early A most excellent early variety of fine quality. Ears five rowed or more, with short nearly square grains which are very white, sweet and tender. Plants about four and one-half feet high. This is the sort so largely grown in Majne for canning and it is the use of this register rether. largely grown in Maine for canning and it is the use of this variety rather than any peculiarity of soil that has given Maine sweet corn its reputation for quality. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$4.50

than any pecunarity of soil that has given maine sweet corn its reputation for quality. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$4.50

An early sweet corn with golden yellow grain, rowed, six to seven inches long and of the medium size found most suitable for the table. The flavor is exceptionally rich and delicious. Our stock has been very carefully selected during several seasons and will be found decidedly superior to much that is offered. Height four to five feet. Pkt. 10c; Pt. 20c; Qt. 30c; 4 Qts. \$1.00; Bu. \$6.00

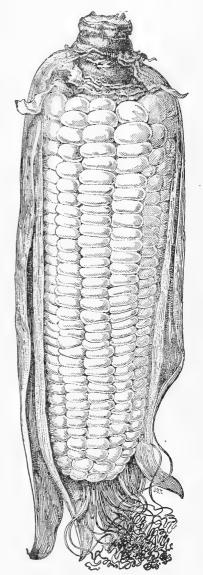

Early Minnesota

This old and deservedly popular variety is one of the best early sorts for the market and the private garden. Stalks about six feet high and bearing one or two ears well covered with husks. Ears about eight inches long, eight rowed; kernels very broad, sweet and tender, not shrinking much in drying. By careful selection we have developed a stock of this standard variety which is remarkably uniform and in which all the goodqualities that have made this sort so popular are intensified. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$4.50

Kendel's Early Giant

Stalks about five and one-half feet high. Ears about eight inches long, twelve rowed, grain rather broad and shallow, quality very good. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$4.75

Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$4.75

MAMMOTH WHITE CORY

If corn is wanted by mail or express prepaid add 10 cents per pint, 15 cents per quart for charges.

#### CORN

#### SWEET, OR TABLE VARIETIES—Continued

Early Sweet, or Sugar

Ears about nine inches long, slender, eight rowed. Grain very white, tender and sugabut excellent table sort. Our stock is distinct and true and not such a mixture of all sorts of early sweet or sugar corn as is often offered under this name. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$4.50

Perry's Hybrid

This is a very popular eastern variety. Stalks about six feet high, bearing two ears about eight inches long, twelve or fourteen rowed, which often have a red or pink cob; grain medium sized, cooking very white and tender. Matures a little later than Minnesota. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$5.00

Black Mexican

This corn, when in condition for the table, cooks remarkably white, but the ripe grain is black or bluish black. It is surpassed by none in tenderness and fine quality. For family use we consider it the most desirable second early sort. It does especially well for second early in the south. Stalk about six and one-half feet high; ears about eight inches long. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$5.00

Country Gentleman

der, white grains of excellent quality. Ears seven to nine inches long; stalks from six and one-half to seven feet high. By many it is regarded as the best of the late varieties. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$4.50

Ferry's Early Evergreen green corn that were claimed to be earlier than Stowell's Evergreen and to be just as good, but we have never found any of them so valuable as the stock of this variety we offer. It has been proven both on our trial grounds and in the field to come into fit condition for use much earlier than Stowell's Evergreen and to remain in condition quite as long. Ears about seven inches long, with sixteen to twenty more or less irregular rows with very deep grain which is of the very best quality. Plants average from six and one-half to seven feet high and in ear resemble those of Stowell's Evergreen, but differ in earliness and we think are more uniform. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$4.50

Stowell's Evergreen and productive, very tender and sugary, remaining a long time in condition suitable for boiling. Our stock has been carefully grown and selected to avoid the tendency to a shorter grain and deterioration in the evergreen character of this best known of all late sorts. Ears about eight inches long, sixteen to twenty rowed; stalks about seven and one-half feet high. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$4.00

Mammoth

A rather late variety, but producing the largest ears of any sort with which we are acquainted. It is of excellent quality, sweet, tender and delicious and its only fault is the immense size of the ears, which are about twelve inches long and sixteen or eighteen rowed. Plant very large, about eight feet high. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. \$4.75

#### FIELD VARIETIES

Extra Early Adams table corn in the south. Stalks about four feet high, with small tassel, very few leaves, and without suckers. Ear short, very full, often nearly as thick as it is long, well covered with coarse husks; kernels white, smooth. An extremely hardy variety which can be grown closer together than most sorts. Pkt. 10c; Pt. 15c; Qt. 20c; 4 Qts. 60c; Bu.\$3.50

Early Adams, or Burlington An excellent early field variety and often used for table, particularly in the south. Ears about eight inches long, twelve or fourteen rowed; kernels white, rounded, somewhat deeper than broad and indented at the outer end which is whiter and less transparent than the inner. Stalks about six feet high. Pkt. 10c; Pt. 15c; Qt. 20c; 4 Qts. 60c; Bu. \$3.50

Early Red Blazed

An early flint sort about seven feet high. Ears ten to twelve inches long, eight rowed, well filled. Grain flinty, of fine quality, bright yellow at base of ears, but red at the tips. Known also as Smut Nose. Pkt. 10c; Pt. 15c; Qt. 20c; 4 Qts. 50c; Bu. \$2.50.

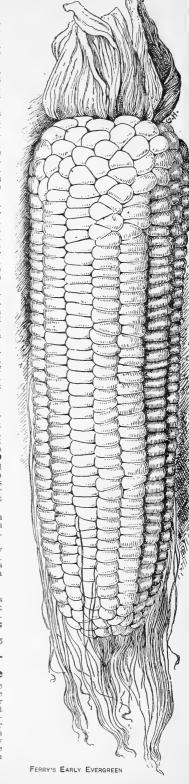

Early Golden Dent, or Pride of the North A very early Stalks about seven feet high, with broad leaves. Ears about seven inches long, twelve to sixteen rowed, well filled. Grain long, yellow, making an extra quality of meal. Pkt. 10c; Pt. 15c; Qt. 20c; 4 Qts. 50c; Bu. \$2.50

Rice Pop Corn A very handsome and prolific variety. Ears short; kernels long, pointed and resemble rice; color white. No variety of popcorn is superior to this for parching. We supply lots of four quarts and less, shelled. Pkt. 10c; Pt. 15c; Qt. 25c; 4 Qts. 75c; Bu. of ears \$2.25

If corn is wanted by mail or express prepaid add 10 cents per pint, 15 cents per quart for charges.

#### CORN SALAD Fetticus, or Lamb's Lettuce

This small salad is used during the winter and spring months as a substitute for lettuce and is also cooked and used like spinage. In warm weather the plants will mature in four to six weeks. During August and September sow the seed in shallow drills about one foot apart. If the soil is dry it should be firmly pressed over the seed in order to secure prompt germination. On the approach of severe cold weather, cover with straw or coarse litter. The plants will also do well if the seed is sown very early in the spring and like most salad plants, are greatly improved if sown on very rich soil; indeed the ground can scarcely be made too rich for them. The seed we offer is extra cleaned, quite different from much that appears on the market. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 65c.

This is one of the vegetables that can be grown to perfection by any one who can control a few square yards of soil that is fully exposed to the sun. Every family should be supplied from its own garden, since the fruit is so much better when gathered fresh from the vines as desired for use than it is in the more or less wilted condition in which it is found on the market.

which it is found on the market.

In order to obtain the largest yield of cucumbers, the soil should be well enriched with well rotted manure, but an abundance of good fruit can be raised on any rich garden soil. Plant the seed not over an inch deep in hills four to six feet apart each way, dropping fifteen to twenty seeds in a hill. After the plants begin to crowd and danger from the striped beetle is pretty well over, thin to three plants to the hill. Give frequent but shallow cultivation until the plants make runners so long that this is impracticable. In field culture, plow furrows four feet apart and similar ones at right angles to the first. At each intersection drop a shovelful or more of well rotted manure which should be well mixed with the soil, forming a broad, flat hill four to six inches above the surface. Many growers omit every fourth row, thus forming paths for the distribution of manure and gathering the fruit. In many sections, where earliness is very important, market gardeners start plants in boxes made portant, market gardeners start plants in boxes made like the ordinary berry box, but without the raised bot-tom. The boxes are set in hotbeds or cold frames, filled with rich, friable soil and the seed planted. When danger of frost is over, the plants are set in the open ground, the boxes being cut away, so that the roots are not disturbed at all.

not disturbed at all.

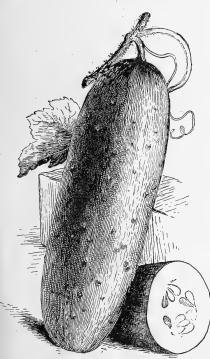

The plants are liable to attack from the striped cucumber beetles which are so numerous in some cases as to destroy them. These insects may be kept off by a frequent dusting with air slacked lime, soot or sifted ashes diluted with fine road earth. Care should be taken not to use too much of any of the above materials, for if used too freely they will kill the vines. The best protection against injury is a vigorous and rapid growth of the young plants.

Pick the fruit before it begins to ripen, as the vines

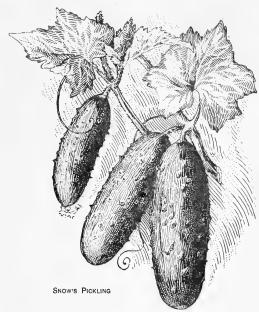

Pick the fruit before it begins to ripen, as the vines cease setting fruit as soon as any seed begins to of pulling the fruit off and be careful not to mar the fruit many way, for if the skin be broken the pickles will not keep so well.

We pay particular attention to growing and selecting the various strains so as to here the pickles will not keep so well.

keep them pure and true to name.

EARLY WHITE SPINE

Early Cluster

Vine vigorous, producing the bulk of the crop
near the root and in clusters. Fruit short, with
uniformly thick end, dark green, but paler at blossom end. A
hardy and very productive sort.

Lb. 30c; Lb. \$1.00

Pkt. 5c; Oz. 10c; 2 Oz. 20c;

untormy thick end, dark green, but paler at blossom end. A hardy and very productive sort. Pkt. 5c; Oz. 10c; 2 Oz. 20c; ½ Lb. 30c; Lb. \$1.00

Early Short Green and is an excellent sort, both for table use and for pickling. Plants very vigorous and productive. Fruit straight, a little smaller at the ends, bright green, lighter at the blossom end. Comes into condition for use a little later than the Early Cluster and keeps green a long time. Our stock is very superior. Pkt. 5c; Oz. 10c; 2 Oz. 20c; ½ Lb. 30c; Lb. \$1.00

Muscatine Pickling in shape, of deep green color, blunt ended and very desirable for small pickles. One of the most promising of the recent improvements in pickling cucumbers. Pkt. 5c; Oz. 15c; 2 Oz. 25c; ½ Lb. 40c; Lb. \$1.25

Pressing Perfected ety are short, cylindrical and blunt ended, making, when packed in bottles, very handsome, showy pickles of the very best quality. For this purpose we recommend the variety more highly than any other sort. The vines are vigorous, setting their fruit early and are very productive. Pkt. 5c; Oz. 15c; 2 Oz. 25c; ½ Lb. 40c; Lb. \$1.25

Snow's Pickling cumber; cylindrical, square ended, and very popular with many growers who want an ideal bottle pickle. The seed we offer was grown from a very fine lot of stock seed procured from the originator. Pkt. 5c; Oz. 15c; 2 Oz. 25c; ½ Lb. 40c; Lb. \$1.25

Chicago, or Westerfield deners. Fruit medium length, Pickling pointed at each end, with very large and prominent spines; and is one of the best for those who want crisp, coarsely spined pickles. Pkt. 5c; Oz. 10c; 2 Oz. 20c; ½ Lb. 35c; Lb. \$1.10

Boston Pickling Intermediate between the Long and the Short pickle which is now offeren of Green, forming a long, slender, cylindrical pickle which is now offeren of forming a long, slender, cylindrical pickle which is now of the property and the property of the property and the pickle pickle pickles.

Jersey Pickling
pickle which is very crisp and tender.

Long and the Short
Green, forming a long, slender, cylindrical
pickle which is very crisp and tender.

Lo. 35c; Lb. \$1.10

Pkt. 5c; Oz. 10c; 2 Oz. 20c;

Early White Spine One of the best sorts for table use. Vines ruit uniformly straight and handsome, bright green, with a few white spines; flesh tender and of excellent flavor. Pkt. 5c; Oz. 10c; 2 Oz. 20c; ½ Lb. 35c; Lb. \$1.10

Arlington A selection from the Early White Spine, which is more pointed at each end. The young fruits are unusually crisp and tender and are of very dark green color so that the variety is considered by many to be the best for small pickles. Pkt. 5c; Oz. 10c; 2 Oz. 20c; ¼ Lb. 35c; Lb. \$1.10

## **CUCUMBER**—Continued

Klondike A medium early, white spined cucumber of handsome, very dark green color and of excellent quality for slicing. The vines are very hardy and productive. The fruits when mature are about eight inches long, very uniform in size and shape. Color dark green, slightly striped at the ends. The dark green color is retained much longer and is affected less by the hot sun than any other sort with which we are familiar. Its uniform size and shape, and splendid color is making this variety very popular as a shipping sort. (See cut in Supplement, page 8) Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

Extra Long, or Beautiful in shape and color and of the finest quality. The fruit is long, cylindrical, dark green, with Evergreen White Spine very white, crisp and tender flesh. An entirely new and distinct sort developed by ourselves through very careful selection, our aim being to secure the best possible table cucumber. The vine is vigorous and productive and comes into full bearing earlier than the Bismarck. This variety is also an excellent sort for culture under glass. Pkt. 5c; Oz. 10c; 2 Oz. 20c; % Lb. \$1.10

Emerald A rather late variety of very symmetrical shape and smooth skin, retaining its dark green color until nearly ripe. It is spineless and the flesh is crisp, white and tender. Pkt. 5c; Oz. 10c; 2 Oz. 20c; ½ Lb. 30c; Lb. \$1.00

Cumberland A distinct variety, said to have originated from crossing the Parisian Pickling and the Early White Spine; it certainly has the good qualities of each of these sorts. The fruits

are large, symmetrical, dark green, covered with innumerable small white spines and are of prime quality for slicing. The vine is vigorous, wonderfully prolific and continues in bearing much longer than most sorts. Pkt. 5c; Oz. 10c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00

Improved Vines very vigorous Long Green and productive,

forming fruit fit for the table nearly as early as the shorter sorts; fruit about twelve inches long, from and crisp. Evenllon

about twelve inches long, firm and crisp. Excellent for pickles; also the mature fruits are sometimes used for making sweet pickles. We offer a carefully selected strain uniformly long, of good form and with the large warts and spines well distributed over the surface instead of being clustered at one end as in inferior stocks. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

EXTRA LONG, OR EVERGREEN WHITE SPINE

Small Gherkin (For Pickles) A very small, oval, all others and grown exclusively for pickles. It is the smallest of all the varieties and should always be picked when young and tender. The seed is slow to germinate, requiring usually from two to three weeks. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.25

The seed should be sown in drills about sixteen inches apart, on very rich ground and the plants well cultivated. It may be planted very early but repeated sowings are necessary to secure a succession. Keep off insects by dusting with Pyrethrum powder.

Curled, or Pepper Grass
flavor of which its warm, pungent taste makes a most agreeable addition. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 60c.
Gray Seeded Early Winter

This small salad is much used with lettuce, to the flavor of with the star makes a most agreeable addition. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 60c.

Gray Seeded Early Winter

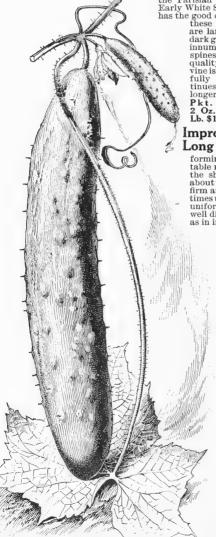

Winter

Gray Seeded Early Winter

produces a large cluster of leaves quite similar to those of
the Water Cress in appearance and quality. It is quite hardy
and thrives best in the cool autumn months. Also known
as Upland. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

True Water

This is a distinct variety of cress with small, oval leaves and thrives best when its roots and stems are submerged in water. A fair growth may be obtained in soil which is kept wet. It is one of the most delicious of small salads and should be planted wherever a suitable place can be found. The seed should be sown and lightly covered in gravelly, mucky lands along the borders of small, rapid streams. The plants will need no subsequent culture, as under favorable conditions they increase very rapidly by self-sown seed and extension of the roots. When gathered for the market the shoots should be cut, not broken off. In summer it is best to cut them closely, the oftener the better. Pkt. 5c; Oz. 35c; 2 Oz. 60c; ½ Lb. \$1.00; Lb. \$3.50

IMPROVED LONG GREEN

LARGE GREEN CURLED ENDIVE

## **DANDELION**

Sow early in the spring, in very warm, rich soil, in drills eighteen inches apart; thin the young plants to five inches in the row and cultivate well; they will be fit for cutting the next spring. When grown for the roots, sow in September and cultivate well during the fall and the following summer; the roots will be fit to dig in October.

Cultivated, or French Common improvement on the wild dandelion. Very early and vigorous in growth. Pkt. 5c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00

Improved Thick Leaved A carefully selected in thickness of leaf and deep green color. Pkt. 5c; Oz. 45c; 2 Oz. 85c; 4 Lb. \$1.50; Lb. \$4.50

# EGG PLANT

Egg Plant seed germinates slowly and should be started in moderately high temperature, for in this, as in all sub-tropical plants, it is of importance to secure a rapid and continuous growth from the first, the plants never recovering from a check received when young. When the plants have formed two rough leaves transplant to three or four inches apart. When the ground is warm and all danger not only from frosts but from cold nights is past, harden off the plants by gradual exposure to the sun and air and decreasing the supply of water, then carefully transplant to the open ground, setting the plants two and one-half feet apart. If needed, shade the young plants and protect them from the potato bug which otherwise often destroys them. Some seasons egg plants will fail to set fruit or will not begin bearing until too late to mature, no matter how faithfully they may have been cared for. This is especially likely to happen if the summer is cool and rather moist. We know of no certain remedy for it, although it is a good practice to pinch off the ends of the branches after the plants begin to bloom, so that not more than two or three fruits will set. It is desirable to shade the plants when young from very hot sun.

This is a very early maturing,

Early Long Purple
This is a very early maturing, and most productive variety; fruit long, dark, rich purple and of fine quality. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.25

Black Pekin Nearly as early as the Early Long Purple and nearly as large as the later sorts; desirable for market gardeners' use. Fruit nearly round; skin smooth, black and glossy; flesh white, fine grained and delicate. Pkt. 5c; Oz. 35c; 2 Oz. 60c; 4 Lb. \$1.00; Lb. \$3.50

Black Beauty
Fruit large, symmetrical in shape and uniformly of a rich dark purple color.
Fruits mature a little earlier than our Improved Large
Purple but are not quite as large. Pkt. 5c; Oz. 45c;
2 Oz. 85c; 4 Lb. \$1.50; Lb. \$4.50

D. M. Ferry & Co's is a general favorite both Improved Large Purple for market and prisize and fine quality of its fruit and its extreme productiveness make it the most profitable for market gardeners. Plants large, spreading; foliage light green; fruit very large, oval; color a splendid dark purple. Plants usually ripen four to eight large fruits. Pkt. 5c; Oz. 40c; 2 Oz. 75c; 4 Lb. \$1.25; Lb. \$3.75

# **ENDIVE**

Endive may be grown at any season of the year but is more generally used late in the fall. Sow the seed in June or July in drills fourteen to twenty inches apart and when well started thin the plants to one foot apart. When nearly full grown tie the outer leaves together over the center in order to blanch the heart of the plant. By covering fresh plants every few days a succession may be kept up.

Large Green Curled A large, strong growing up, can be made to form finely blanched centers of good quality. Outer leaves well cut and bright, deep green. Pkt. 5c; Oz. 15c; 2 Oz. 25c; ½ Lb. 40c; Lb. \$1.50

Ever White Curled

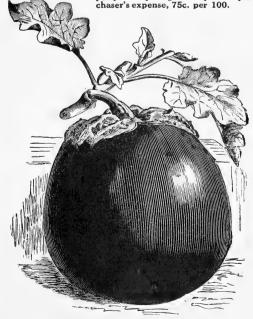

A very beautiful sort in which the leaves are very light colored, even the outer ones being nearly white. The plant is moderately dense, with divided leaves which are a little coarser than those of the Large Green Curled. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.50

Moss Curled One of the best autumn, winter or spring salads. Plants compact growing, forming large, dense clusters of finely divided, green leaves which, when properly blanched, are exceedingly crisp and tender. Pkt. 5c; Oz. 15c; 2 Oz. 25c; ½ Lb. 40c; Lb. \$1.25

Broad Leaved Batavian variety has broad, thick, plain or slightly wrinkled leaves forming a large head and is desirable for stews and soups. If the outer leaves are gathered and tied at the top, the inner ones will blanch and may be used for salad. Pkt. 5c; Oz. 15c; 2 Oz. 25c; & Lb. 40c; Lb. \$1.25

GARLIC A bulbous rooted plant of the onion family with a strong, penetrating odor but much esteemed by some for flavoring soups, stews, etc. We frequently receive orders for garlic seed but we can supply bulbs only. Prepare the ground the same as for onions and plant the bulbs in drills eight inches apart and four inches apart in the rows, covering two inches deep. When the leavesturn yellow take up the bulbs, dry in the shade and lay them up in a dry loft as you would onions. BULBS, \*4Lb. 20c; Lb. 50c.

HORSE RADISH Horse Radish rarely produces seed but is grown from pieces of the roots. Mark off the rows two and one-half feet apart in rich, moist, well prepared ground and set the pieces of roots eighteen inches apart in the rows vertically, the small end down and the top one to three inches below the surface. Cultivate thoroughly until the tops cover the ground, when their shade will keep down the weeds. SMALL ROOTS—3 for 10c; 25c. per dozen, postpaid. By freight or express at pur-

D. M. FERRY & CO'S IMPROVED LARGE PURPLE EGG PLANT

Borecole, Kale and German Greens are general terms applied to certain cabbage-like plants which do not form heads, but are used in their open growth. Some of the varieties are the most tender and delicate of any of the cabbage tribe. They are hardy and are not

injured by the frost.

As far north as Cincinnati the seed may be sown in September and plants grown like spinage, or planted and grown like late cabbage until very late in the season. In the south kale will live and grow throughout the winter without protection. It is better not to cut or handle the plants while frozen, but if this is unavoidable, thaw them out in cold water. The young shoots which start up in the spring from the old stumps are very tender and make excellent greens.

DWARF CURLED SCOTCH, OR GERMAN GREENS

The plant is low and com-

Dwarf Curled Scotch, or German Greens
the whole plant resembles a bunch of moss. It would be well worthy of cultivation simply for its beauty. One of the best sorts for use and when well grown and cooked is one of the most palatable of vegetables. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ¼ Lb. 25c; Lb. 85c.

Siberian One of kr known and most largely used varieties of kale. It sometimes called Sprouts or German Greens. The bluish green leaves are very large, and comparative-ly plain in the center, but coarsely cut and distinctly frilled on the edge. The plant is low but spreading and very hardy. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c.

TALL GREEN CURLED SCOTCH

Very hardy and not Tall Green Curled Scotch

Very hardy and not injured by a moderate frost. About thirty inches tall with many dark green leaves, densely curled and cut, forming a beautiful plant. Stands the winters in the middle states without any pro-

tection. Pkt. 5c; Oz. 10c; 2 Oz. 15c; \( \frac{1}{2} \) Lb. 25c; Lb. 85c. German Dwarf Purple but rich, purple color. Pkt. 5c; Oz. 10c; 2 Oz. 20c; 4 Lb. 30c; Lb. \$1.00

EARLY WHITE

KOHL RABI The Kohl Rabi is a vegetable intermediate between the cabbage and turnip and somewhat resembles each in flavor. The edible part is a turnip shaped bulb when quite small, as it is then very tender and delicate, but if allowed to reach its full size it becomes tough and stringy. Seed should be sown in light, rich soil as early as possible, in drills, sixteen inches apart and when well established thin to six inches apart in the row. Plantings at intervals of ten days will give a succession until hot weather, when they fail to grow well; plantings may be made the latter part of July for fall use.

Early White Vienna (Extra for forcing) with distinctly small tops. size, white, handsome and of best quality. Pkt. 5c; Oz. 25c; 2 Oz. 40c; ½ Lb. 75c; Lb. \$2.25

Early Purple Vienna Very early, with small top, the leaf stems being tinged with purple. Bulb bright purple, flesh white; desirable for forcing and early outdoor planting. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.25

Hardy, quite late and used for feeding stock. Bulbs large, weighing eight to ten pounds when fully grown, whitish green in color; feaves large and very numerous. Pkt. 5c; Oz. 10c; 2 Oz. 20c; 34 Lb. 30c; Lb. \$1.00

Belongs to the onion family. Sow the seed and care for the young plants as for onions, but they need plant is about the size of a goose quill, transplant to a prepared bed in rows about three or three and one-half feet apart and four or five inches in the row. Set the roots deep and draw the earth to them when cultivating, so that they may be well blanched by

or five inches in the row. Set the roots deep and draw the earth to them when cultivating, so that they may be well blanched by the time they are fit for use.

London Flag

This is the variety generally cultivated in this country. It is hardy and of good quality.

Pkt. 5c; Oz. 10c; 2 Oz. 20c; ½ Lb. 30c; Lb. \$1.00

Large American Flag popular with some market gardeners on account of its being larger than the London Flag.

Pkt. 5c; Oz. 15c; 2 Oz. 25c; ½ Lb. 40c; Lb. \$1.25

Stems very large but comparatively short; the leaf is very broad, covered with whitish bloom. Stands a long time in condition for use. Pkt. 5c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

Monstrous Carentan
very white and tender. A hardy and desirable sort.
Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

MONSTROUS CARENTAN LEEK

# LETTUCE

For early outdoor culture in the latitude of Cincinnati and southward the seed may be planted in the fall, protecting the young plants from severe freezing either with frames or coarse litter which may be removed as soon as danger of severe freezing is over.

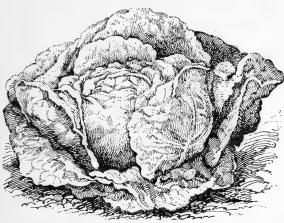

of severe freezing is over.

Lettuce in ground out of doors will stand some freezing but is killed by prolonged frost or frequent freezing and thawing. North of Cincinnati an early crop may be secured by starting under glass from January to March and hardening off well before setting in ground, which should be done as soon as weather will permit.

Lettuce to be at its best should be grown as rapidly as possible, hence the soil should be made as rich and friable as possible by liberal manuring and thorough preparation. For winter, sow under glass from November to February and thin out as necessary to prevent crowding. Keep a moderate heat and give all the light and air possible. For general crop, sow outdoors as early in the spring as the ground can be worked, in drills eighteen inches apart and thin the young plants to four inches apart in theorow. As the plants begin to crowd thin them out and use as required. In this way a much longer succession of cuttings may be had from the same ground.

Varieties marked A are particularly adapted for culture under glass and for early spring use. Those marked B are sometimes grown under glass, but are especially desirable for outdoor, summer culture. Jersey Winter, Big Boston, Brown Dutch, California Cream Butter and Deacon are very hardy and suited for winter outdoor culture in the south.

May King a. (Seed white) A handsome, light green heading variety of medium size and excellent quality. Outdoors the heads mature exceptionally early, attaining a size suitable for use before other sorts, and often the edges of the outer leaves have a brownish tinge. The plant is very compact for so large a head. It is very satisfactory also for forcing under glass. Pkt. 5c; Oz. 20c; 2 Oz. 35c; ½ Lb. 60c; Lb. \$1.75

Boston Forcing Sized, light green, compact, very early heading lettuce of excellent quality and very early learning letter of exercise quarty are especially desirable for forcing. Outdoors it is one of the earliest to form a head under favorable conditions. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c;

DEACON

Early Tennis Ball A (Seed black) One of the best heading lettuces, especially desirable for early planting outdoors. Plants large, having thick, bright green leaves, forming very solid heads, the inner leaves being blanched to a rich, creamy white, and crisp, tender and buttery. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

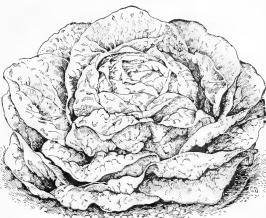

Pkt. 5c; Oz. 15c; 2 Oz. 25c; ½ Lb. 40c; Lb. \$1.25

Salamander light green head of excellent quality. Leaves broad, thick, somewhat crumpled and closely overlapping so that the inner ones are very finely blanched. Withstands hot weather remarkably well and is one of the most satisfactory heading lettucesfor growing outdoors. Pkt. 5c; Oz. 15c; 2 Oz. 25c; ½ Lb. 40c; Lb. \$1.25 each wite)

White Summer Cabbage H e a d s firm, bright green, with thick, tender leaves, the inner ones blanched a beautiful creamy yellow Pkt. 5c; Oz. 10c; 2 Oz. 20c; ½ Lb. 30c; Lb. \$1.00

Oz. 10c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00

Hubbard's Market leaved, bright green heading variety, forming a large, very compact head similar in type to Salamander, slightly larger, but a little later maturing. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

SALAMANDER

Mammoth Black B. A smooth leaved lettuce forming very large, compact, cabbage-like heads of thick, yellowish green leaves, the inner ones beautifully blanched, very crisp, tender and of fine flavor. Pkt. 5c; Oz. 15c; 2 Oz. 25c; a Lb. 40c; Lb. \$1.50

Deacon B. (Seed white) Heads of medium size, very firm and remain in condition for use a long time. The plant is very compact, with few outer leaves which are usually very smooth, thick and of light grayish green color. The inner leaves blanch to a bright, rich yellow and are very well flavored, crisp and buttery. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.35

Big Boston and also in demand as a compact, large heading, forcing sort. Plants large, very hardy and vigorous; leaves broad, comparatively smooth but wavy at edge, thin, very hard and crisp; color bright light green, the head slightly tinged with raddish brown. Grown exthe head slightly tinged with reddish brown. Grown extensively in the south for shipment north in the winter. Pkt. 5c; Oz. 20c; 2 Oz. 35c; & Lb. 60c; Lb. \$1.75

## ETTUCE—CABBAGE OR HEADING—Continued

California Cream Butter A.(Seed brown) A very reliable heading sort, or Royal Summer Cabbage with glossy, deep outer ones slightly splashed with brown. The variety forms a very solid head of rich cream colored leaves, very thick, tender and of splendid quality. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

Jersey Winter heading, medium sized lettuce. The variety is very hardy and when wintered over it has proven to be one of the very earliest to mature its heads. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.50

Brown Dutch B. (Seed black) Outer leaves large, thick, green tinged with brown and covering a solid head which is beautifully blanched, sweet, tender and well flavored. Desirable especially because of its hardiness and may be used in the south as a winter lettuce. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

B. (Seed white) One of the most desirable of the Hanson later summer lettuces. The plant is compact and forms a large, cabbage-like head and remains in condition longer than most heading sorts. Outer leaves bright green, broad, frilled at edge and with distinctive midrib; incorpor leaves white and even when and the second ner leaves white and curved at the base; very crisp and sweet. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.50

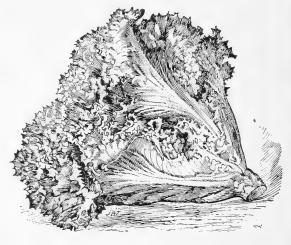

### CURLED OR LOOSE LEAVED VARIETIES

Grand Rapids A. (Seed black) As a lettuce for greenhouse forcing this variety undoubtedly stands at the head of the list, being of quick growth, little liable to rot and remaining in condition several days after being fit to cut. The plant is upright and forms a loose cluster of large, thin, bright green leaves decidedly crimped and savoyed. The leaves do not wilt quickly after cutting so that the variety will stand shipping long distances better than most sorts. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.50 Lb. \$1.50

Detroit Market A. (Seed white) An excelent variety for growing under glass where it stands higher temperature than Grand Rapids and can be crowded to maturity. Also well adapted for outdoor growing. The plant is more compact than the Grand Rapids, is lighter colored and less frilled at edge of leaves which are quite crisp and tender. Pkt. 5c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$1.75

Simpson's Early Curled An early, erect growing, clustering variety. Leaves light green, slightly frilled and much blistered, sweet, tender and well flavored. The sort is especially adapted for sowing thickly and cutting when the plants are very young. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

Ferry's Early clustering, non-heading lettuce, excellent for the home garden and undoubtedly the most easily grown variety in cultivation. It is too tender, however, to stand shipping or handling on the market. The leaves of the variety are crimped, bright green tinged with brownish red, very tender and sweet. Pkt. 5c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.35

GRAND RAPIDS

Black Seeded Simpson

A. One of the best varieties for sowing out of doors where a thin, exceedingly tender leaf is desired and for those markets which demand a very large, loose clustering sort of a light yellowish green color. Leaves are slightly ruffled and blistered and even the large outer ones are very tender. Uniformly attractive and remains of excellent quality a very long time.

Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.50

Denver Market B. (Seed white) A much frilled, bright green medium sized head, the inner leaves well blanched and finely crumpled. Desirable for growing under glass and a popular outdoor summer variety. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.35

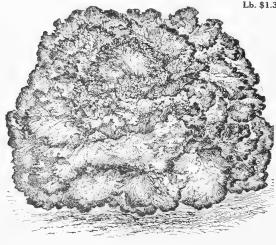

> Tilton's White Star B. (Seed white) An excellent forcing and outdoor sort for market gardeners, as it grows to a large size, with broad, thick leaves frilled at the edges. The variety forms a loose cluster, blanches well, is of very good quality and remains long in condition for use before running to seed. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.50

(Romaine) Cos Let-Cos Lettuce (Romaine) Cos Let-tuce is distinct in having long, narrow, shaped heads which blanch better by having the

(Seed white) Early White Self-Folding Leaves yellowish white, crisp and tender; a self-blanching lettuce of superior flavor. Sold also as Romaine or Trianon. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.50

outer leaves drawn about them and tied.

Martynia PROBOSCIDEA A strong growing, hardy, annual plant with numerous seed pods which when young and tender are highly prized for pickling. Sow in rich, warm soil when danger of frost is over, in drills three feet apart and thin the plants out to two feet apart in the row. Pkt. 10c; Oz. 30c; 2 Oz. 55c; 4 Lb. \$1.00; Lb. \$3.00 (See also page 78)

FERRY'S EARLY PRIZE HEAD

### **IUSK** MELON

Plant the seed in hills six feet apart each way, dropping ten to twelve seeds in a hill. After the plants begin to crowd and the striped beetles are pretty well gone thin to four of the most vigorous plants in a hill. Give frequent but shallow cultivation, until the plants make runners so long that this is impracticable. Rich earth for the young plants is far better than manure, but if the latter must be used, see that it is well rotted and thoroughly mixed with the soil. If the plants grow very rank, more and finer fruit will be secured by allowing the main branch to continue growing but pinch off the end of each side branch after it has one fruit set. The quality of melons of all varieties is largely dependent upon conditions of growth and ripening. Unhealthy vines or unfavorable weather produces fruit of comparatively poor flavor.

The plants are liable to attack from the striped beetles which are so numerous in some cases as to destroy them. The beetles may be kept off by frequent dusting with air-slacked lime, soot or sifted ashes diluted with fine road earth, Care should be taken not to use too much of any of the above materials or the vines will be injured. Should even the diluted material prove injurious to the vine, use road earth only, as frequent dusting with this alone will often prove effective especially if a wind is blowing.

### **GREEN FLESHED VARIETIES**

Extra Early Citron

A small, round melon, valuable earliness, hardiness and great productiveness. The skin is green, becoming yellowish at maturity. The flesh is light green, sweet and of good quality. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

Jenny Lind ductive. Fruit small, somewhat flattened, deeply ribbed and well netted. Flesh green and exceedingly sweet. This variety ripens early and on account of its size is particularly good for hotel use. We know of no green fleshed melon maturing equally as early that is of more excellent quality. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25 of more excellent quality. Lb. 40c; Lb. \$1.25

Extra Early Hackensack very different and much superior to that often sold as Extra Early Hackensack. The fruit is nearly two weeks earlier than Hackensack, medium to large sized, nearly round or somewhat flattened, evenly and deeply ribbed and with very coarse netting. The skin is green, slightly tinged with yellow as the fruits mature. The flesh is green

and with very coarse netting. The skin is green, slightly tinged with yellow as the fruits mature. The flesh is green, a little coarse but very juicy, sweet and well flavored. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

Netted Gem, or Rocky Ford one of the most popular of small or basket melons and is shipped in large quantities from Colorado and Arizona. The fruit is oval, a control with the description. Flesh popular or small or basket melons and is snipped in large quantities from Colorado and Arizona. The fruit is oval, slightly ribbed, densely covered with fine netting. Flesh thick, green, very sweet and highly flavored. We offer an exceptionally fine stock of this early sort, the fruit being very uniform in shape and quality and of the even size that is so desirable in a ship.

even size that is so desirable in a shipping melon. Pkt. 5c; Oz. 10c; 2 Oz. 20c; Lb. 30c; Lb. \$1.00

Baltimore, Fruit or Acme sized, oval oval, slightly pointed at stem end, slightly ribbed, covered when ripe with coarse netting. Flesh thick green, very finely flavored and sweet. A very productive, sure cropper and one of the most uniformly good, green fleshed melons on our list. Pkt. 5c; Oz. 15c; 2 Oz. 25c; Lb. 40c; Lb. \$1.25

Cosmopolitan This variety, combining, as it does, the firm, sweet flesh of the French Cantaloupe and the delicious flavor of the American Musk Melon, is truly cos-mopolitan in charac-It is the most beautiful of the green fleshed melons. Fruit slightly oval, nearly round, without ribs. Color light green but becoming covered at maturity with dense silver gray netting. The flesh is green, firm, sweet and uniformly high flavored. Pkt. 5c; Oz. 15c; 2 Oz. 25c; Lb. 40c; Lb. \$1.25

Champion Market

Fruit large, round or slightly oval, slightly ribbed and covered with dense netting. Flesh green, of medium texture, very thick and sweet. The variety is an improvement on ed with dense netting. Flesh green, of medium texture, very thick and sweet. The variety is an improvement on Montreal in earliness and productiveness and will suit those who like a large, sweet, green fleshed sort. It can always be depended upon for a good crop. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

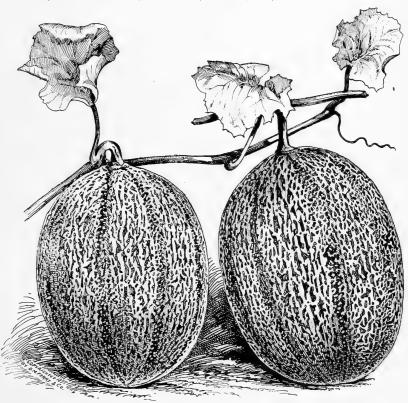

Hackensack, or Turk's Cap Fruit very large, nearly round, sometimes a little flattened; ribs large and of irregular width, densely covered with coarse netting; flesh green, thick coarse but very sweet, and finely flavored. Our stock

which, densely covered with coarse netting; liesh green, thick, coarse but very sweet and finely flavored. Our stock is true to the "Turk's Cap" type and after careful comparison with that of other growers we do not hesitate to pronounce it the best in the country. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

Improved Large Green Nutmer ous, hardy, productive; fruit very large, round, slightly flattened at both ends, ribbed, covered with coarse netting; flesh very

both ends, ribbed, covered with coarse netting; flesh very thick and of the highest flavor. Pkt. 5c; Oz. 15c; 2 Oz. 25c; ½ Lb. 40c; Lb. \$1.25

Bay View ten to fifteen pounds, long, deeply ribbed and is covered with coarse netting. Skin green, becoming slightly yellow as fruits ripen. Flesh green, thick and of fine flavor. By far the best of the large late maturing melons and so hardy that we especially recommend it to inexperienced cultivators. Pkt. 5c; Oz. 15c; 2 Oz. 40c; Lb. \$1.25 2 Oz. 25c; ¼ Oz. 40c; Lb. \$1.25

NETTED GEM, OR ROCKY FORD

## MUSK MELON-Continued

ORANGE FLESHED VARIETIES

Emerald Gem
fruit small to medium size, globular or slightly flattened at the ends, only slightly netted and ribbed. Skin deep green while young, becoming slightly tinged with yellow as the fruit matures; flesh deep salmon-yellow, thick, ripening close to the rind and exceedingly high flavored. This splendid variety has steadily grown in popular favor and in many large markets leads all other kinds on account of its sweetness and convenient size. Pkt. 5e; Oz. 20c; 2 Oz. 35e; ½ Lb. 60c; Lb. \$1.75

Tip Top This very productive melon is of large size, nearly round, slightly ribbed and fairly well covered with shallow netting. The flesh is deep yellow in color and of excellent quality. Pkt. 5c; Oz. 20c; 2 Oz. 35c; ½ Lb. 60c; Lb. \$1.75

Vines hardy and productive;
Vines hardy and productive;
Vines hardy and productive;
deeply ribbed, covered with slight patches
of netting; skin light yellow when mature.
Flesh deep salmon color; very rich and highly
flavored. Pkt. 5c; Oz. 15c; 2 Oz. 25c;
Lb. 40c; Lb. \$1.25

Fully a week

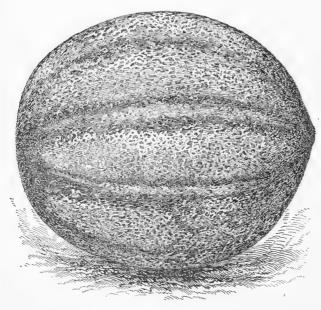

Extra Early Osage earlier than the Osage, fruits a little smaller, more nearly round and the netting extends over more of the surface. These very desirable features, combined with the thick, deep salmon colored flesh and small seed cavity characteristic of

flesh and small seed cavity characteristic of the Osage, make this melon deserving of a place in every home and market garden. Pkt. 5c; Oz. 20c; 2 Oz. 35c; \( \) Lb. \( \) 60c; Lb. \( \) 2.20c

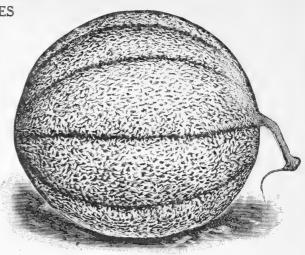

Petoskey, or Paul Rose

A yellow fleshed sort of suitable size for a basket melon and of the finest quality. Fruit oval, about five 
inches in diameter and in general appearance much like 
the Netted Gem, but a little larger. Flesh orange colored, 
highly flavored, very thick, firm and sweet. Pkt. 5c; 
Oz. 15c; 2 Oz. 25c; Lb. 40c; Lb. \$1.50

Admiral Togo or Rocky Ford. We have developed in the Admiral Togo a small musk melon with the very thick, orange flesh and splendid quality of the Defender and possessing the characteristic netting, shape, size and shipping quality of Netted Gem or Rocky Ford. Combining all the good qualities of these two fine varieties we believe the Admiral Togo is an ideal table and basket melon. Pkt. 5c; Oz. 20c; 2 Oz. 35c; 4 Lb. 60c; Lb. \$1.75

EXTRA EARLY OSAGE

Ноороо

Hoodoo A new orange fleshed variety, ideal as a shipping melon and of the very finest quality. Vine vigorous, remarkably blight resisting and very productive. Fruits small and of uniform size. Netting exceptionally fine and dense, extending practically over the entire surface. Rind thin yet very firm, so that the melons arrive in perfect condition in distant markets. Flesh very thick, firm, highly colored, of fine texture and delicious flavor. Pkt. 10c; Oz. 20c; 2 Oz. 35c; 4 Lb. 60c; Lb. \$1.75

Lb. \$1.75

Defender

This is one of the very best yellow fleshed sorts and in some respects is far superior to shape, slightly ribbed, covered with gray netting. The flesh is firm, fine grained, rich, deep yellow, darker than that of the Osage and of higher flavor. The flesh extends to the rind and retains its color and quality quite to the outer shell which, though thin, is very hard and firm so that one can remove the edible portion with a spoon, leaving a rind no thicker than that of an orange. The vine is vigorous and very productive. The fruit

vigorous and very productive. The fruit because of the hard, firm rind, keeps and bears shipment remarkably well. This splendid variety was originated and introduced by us in 1901 and we have taken pride in maintaining our stocks in the highest state of purity and excellence. We believe it to be identical with the melon introduced three years ago and sold largely as Burrell's Gem. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.50

Osage, or Improved
Miller's Cream oval,
covered more or less with shallow retbing.
The flesh is deep salmon color and very thick, there being but a slight cavity in the center of even the largest fruit. A favorite variety for the later markets, as there is always a considerable demand for it from the restaurants and hotels, where its excellent qualities are highly appreciated. We have taken a great deal of pains to develop the thick, deep, rich colored and finely flavored flesh of this sort, and careful comparisons on our trial grounds prove it to be unequalled, even by "special selected seed" offered at very high prices. Pkt. 5c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$1.75

McCotter's Pride This late variety is the result of long continued skillful breeding and selection, with the purpose of securing a very large melon of spherical shape, with flesh of fine grain and high quality. The fruit is very large, nearly round, moderately ribbed, dark green in color, partially covered with gray netting; orange-red, very thick, sweet and of fine flavor. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 34 Lb. 40c; Lb. \$1.25

# WATE

To make certain of raising good Water Melons, it is essential that the plants have a good start and to this end it is important to prepare hills about eight feet apart, by thoroughly working into the soil an abundance of well rotted manure—hen manure, guano, or other forms rich in nitrogen, being most desirable. Over this highly manured soil put an inch or more of fresh earth and plant the seeds on this, covering them about an inch deep. It is important that the seed should not be planted before the ground becomes warm and dry, as the young plants are very sensitive to cold and wet. When the plants have formed the first pair of rough leaves, they should be thinned so as to leave two or three of the strongest and best to each hill. Frequent watering of the plants with liquid manure will hasten the growth, thus diminishing the danger from insect pests.

Harris' Earliest A splendid, large, extra early melon of exceptionally fine quality. Fruit uniform in shape, slightly oval with irregularly mottled broad stripes of light and dark green. Flesh bright red, sweet and tender. One of the most desirable for planting in the north. Seed black Pkt. 5c; Oz. 10c; 2 Oz. 20c;

Seed black Pkt. 5c; Oz. 10c; 2 Oz. 20c; 4 Lb. 30c; Lb. \$1.00

Phinney's Early
sure cropper. Vines vigorous and productive, fruiting quite early. Fruit medium size, oblong, marbled in stripes of two shades of green; rind thin; flesh pink, tender and crisp. Seed nearly white. Pkt. 5c; This variety is un-Oz. 10c; 2 Oz. 15c; ¼ Lb. 25c; Lb. 75c.

D. M. Ferry & Co's as Ice Cream.

Peerless One of the best sorts for private gardens and for market gardeners who deliver direct to consumers. Vine moderately vigorous, hardy, productive; fruit medium sized, oval, but somewhat uneven in shape, bright green, finely veined with a darker shade; rind thin, flesh weined with a darker snade; rind thin, nesm bright scarlet, solid, crisp, tender and very sweet. Seed white. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

Long Light Icing Sort is much better

than that usually offered and superior to many strains offered as Early Monarch, etc. The melons are uniformly long and large, a little irregular in shape, light green, slightly veined with a little darker shade. The flesh is deep, rich red, and of splendid quality. Seed

white. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 80c.

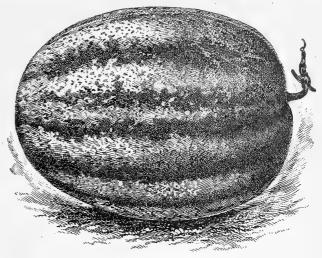

Round Light Icing Fruit medium sized, nearly veined or dotted with light green. Flesh bright, light red, veined or dotted with light green. Flesh bright, light red, very sweet and tender. Seed white. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 1 Lb. 25c; Lb. 80c.

Dark Icing Fruit medium sized, nearly round, dark green, very indistinctly veined and mottled with lighter shade. Flesh very rich, bright red. Seed white. (Crop failed)

Monte Cristo, or Kleckley's Sweets
for home use or near markets. Vine vigorous and productive; fruit of medium size, oblong, tapering slightly
towards the stem end, dark green, often showing fine
russeting. Flesh very bright, rich red, exceedingly sweet.
So crisp and tender that it will not stand shipping, the
fruit bursting open if subjected to even a slight jar, or
when the rind is penetrated with a knife. Seed white.
(Very short crop; sold out)

Florida Favorite

A splendid melon of very large size and excellent quality. Fruit long, dark green, mottled and striped with lighter shade; rind thin but firm, flesh very bright, deep red, very sweet, tender and excellent. Seed white. Pkt. 5c; Oz. 10c; tender and excellent. Seed 2 Oz. 15c; & Lb. 25c; Lb. 75c.

HARRIS' EARLIEST

Alabama Sweet A very large, long melon of fine where it is grown extensively for shipping. Color rather deep green, with dark, irregular striping. Rind firm; flesh bright red. Seed white. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

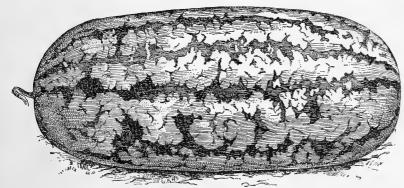

Ferry's Iceberg in 1902. In general shape, size and appearance it is similar to the well known Kolb's Gem, but is distinctly darker and the skin where the melon rests on the ground is rich yellow instead of white as in that variety. It has a very firm, hard rind and is as good a shipper as

the ground is rich yellow instead of white as in that variety. It has a very firm, hard rind and is as good a shipper as Kolb's Gem but the flesh is much deeper colored, extends nearer to the rind, is more tender and sweet. The best dark colored shipping melon yet produced. Seed black. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

Kolb's Gem healthy. Fruit very large, round or slightly oval, marked with irregularly mottled stripes of dark and light green. Rind exceedingly hard and firm, making it a good sort for shipping. Flesh bright red, solid, a little coarse, but sweet and tender. Seed black. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

Dixie growing and hardy, ripening its fruits earlier than most of the large sorts; fruit medium sized to large, about one-third longer than thick. Color of skin dark green, striped with a lighter shade; rind thin but tough; flesh bright scarlet, ripens closely to the rind and is of the best quality. This variety is highly esteemed, especially in the south. Seed black. Pkt. 5c; Oz. 10c; 2 Oz. 15c;

in the south. Seed black.
Pkt. 5c; Oz. 10c; 2 Oz. 15c;
½ Lb. 25c; Lb. 75c.
Chilian A new melon of
splendid quality
which is already very popular on the Pacific coast
and will doubtless take high
rank elsewhere as soon as its desirable characteristics have become more generally known. Fruits medium sized, nearly round or slightly oblong, skin rich deep green, mottled and striped with a still darker shade. Flesh of this variety is decidedly variety this variety is decidedly bright vermilion red; re-markably fine grained but firm and very sweet. Seed white. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 85c.

GYPSY, OR GEORGIA RATTLESNAKE

## () N—Continued

FERRY'S ICEBERG

Gypsy, or Georgia One of the largest, Rattlesnake oldest and most popular sorts, particularly in the south. Fruit long, of light light green color, distinctly striped and blotched with a darker shade. The flesh is bright scarlet and very sweet. Seed nearly white. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c.

**Triumph** A southern variety which has become very popular with shippers. The fruit is of largest with shippers. The fruit is of largest size, nearly round, dark green, some-times indistinctly striped with a lighter shade and has a thin and firm rind which makes it an excellent shipper. Flesh bright red and of good quality. The vine makes a strong and vigorous growth and can be depended upon under ordinarily favorable cir-cumstances to set a large number of fruits. Seed black. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ¼ Lb. 25c; Lb. 75c.

Citron Medium size, uniformly round, smooth, striped and marbled with light green. Flesh white and solid. The fruits are not used for eating in the raw state, but for preserves, pickles, etc. Seed red. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 85c.

MUSHROOM The Mushroom is an edible fungus of which there are numerous varieties. We handle the of pinkish-red, changing to liver color. The mushroom produces seed and there is developed a white, fibrous substance in broken threads, called spawn, which is developed and preserved in horse manure, pressed in the form of bricks. Mushrooms can be grown in cellars, in sheds, in hotbeds or sometimes in the open air, the great essential being a uniform degree of temperature and moisture. Our space is too limited here to give the necessary cultural directions, but these are published in book or pamphlet form. We can furnish, postpaid, for 35c., a book containing very complete directions for the culture of mushrooms. (See list inside of back cover)

PURE CULTURE MUSHROOM SPAWN. By a newly discovered process of selection and grafting, the spawn is scientifically propagated so that large, vigorous and finely flavored mushrooms are reproduced. Earlier, more productive and a marked improvement on wild spawn, either French or English. Brick, (about 11/4 lbs.) postpaid 40c; 5 bricks, not prepaid, \$1.25

MUSTARD Mustard is not only used as a condiment but the green leaves are used as a salad or cut and boiled like spinage. Sow as early in the spring as the ground will permit, in drills about eighteen inches apart, covering one-half inch deep. For succession, sow every few weeks till autumn. Water freely. In the south the seed should be sown in autumn and the plants used early in the spring as a salad and for greens.

White English Leaves comparatively smooth and deeply cut; color medium branch as it approaches early maturity and soon bolts for seed. Pkt. 5c; Oz. 10c; 2 Oz. 10c; 4 Lb. 15c; Lb. 35c.

Southern Giant Curled orous growth and good quality. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 65c.

NASTURTIUM TALL MIXED GARDEN. Cultivated not only for ornament but its beautiful orange colored flowers serve as a garnish for dishes and the young leaves are excellent for salads. The green seed pods preserved in vinegar make a pickle greatly esteemed by many. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c. For other varieties of Nasturtium see page 80.

OKRA, OR GUMBO
Cultivated for its young seed pods which are used in soups and stews.

It is highly esteemed in the south. Plant in hills about four feet apart, putting six to eight seeds in a hill and after the plants are well started, cut out all but two. The dwarf sorts can be planted much closer in hills, two to three feet apart or in drills two feet apart, thinning the plants to about one foot apart in the row. Gather the pods when quite green and about an inch and one-half long.

White Velvet A great improvement on the old White or the Green. The smooth pods which retain their tenderness until nearly full sized. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ¼ Lb. 20c; Lb. 60c.

Perkins' Mammoth Long Pod size and productive, maturing pods earlier than most sorts. The pods are long, slender, deep green and remain tender much longer than most sorts. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 60c.

Dwarf White The longest podded variety; the plants are two feet high and very productive. Mature pods long, greenish white, very thick and fleshy.

Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 60c.

WHITE VELVET OKRA

The Onion not only contains considerable nutriment and has valuable medicinal properties, but is most useful in counteracting the bad effects of sedentary life. The disagreeable odor it imparts to the breath may be avoided in a great measure by thorough cooking, or by eating a few leaves of parsley.

In onion culture, thorough preparation of the ground, careful sowing and the best of after culture, though essential for a full yield, will avail nothing unless seed of the best quality be used. Given the same care and conditions, the product from two lots of onion seed of the same variety but of different quality may be so unequal in the quantity of merchantable onions that it would be more profitable to use the good seed though it cost twenty times as much as the other. Our thorough equipment and long experience in growing onion seed of the very best quality, enables us to say without hesitation that our stock is fully equal to any and superior in quality to most that is offered. Although onions are often raised from sets and from division, by far the best and cheapest mode of production is from seed. The facility with which seed is sown and the superior bulbs it produces, recommend it for general use.

### TO RAISE HOW ONIONS

THE SOIL. A crop of onions can be grown on any soil which will produce a full crop of corn, but on a stiff clay, very light sand or gravel, or on some muck or swamp lands, neither a large nor a very profitable crop can be grown. We prefer a rich loam with a slight mixture of clay. This is much better if it has been cultivated with hoed crops, kept clean from weeds and well manured for two years previous, because if a sufficient quantity of manure to raise an ordinary soil to a proper degree of fertility is applied at once, it is likely to make the onions soft. The same result will follow if we sow on rank mucky ground or on that which is too wet.

MANURING. There is no crop in which a liberal use of manure is more essential than in this and it should be of the best quality, well fermented and shoveled over at least twice during the previous summer to kill weed seeds. If rank, fresh manure is used, it is liable to result in soft bulbs with many scallions. Of the commercial manures, any of the high grade, complete fertilizers are good for ordinary soils and even very rich soils are frequently greatly benefited by fine ground bone, and mucky ones by a liberal dressing of wood ashes.

wood ashes.

PREPARATION. Remove all refuse of previous crops in time to complete the work before the ground freezes up and spread the composted manure evenly at the rate of about fifty cart loads to the acre. This should first be cultivated in and then the ground ploughed a moderate depth, taking a narrow furrow in order to thoroughly mix the manure with the soil. Carefully avoid tramping on the ground during the winter. Cultivate or thoroughly stir the soil with a deep working cultivator or harrow as early in the spring as it can be worked and then in the opposite direction with a light one, after which the entire surface should be made fine and level with a smoothing harrow or hand rake. It is impossible to cultivate the crop economically unless the rows are perfectly straight, to secure this, stretch a line along one side, fourteen feet from the edge and make a distinct mark along it; then having made a wooden marker, something like a giant rake with five teeth wooden marker, something like a giant rake with five teeth about a foot long and standing fourteen inches apart, make four more marks by carefully drawing it with the outside tooth in and the head at right angles to the perfectly

straight mark made by the line. Continue until the marker has gone around this line three times and you reach the side of the field where you began; measure fifteen feet two inches from the last row, stretch the line again and mark around in the same way. This is better than to stretch a line along one side as it is impossible to prevent the rows gradually becoming crooked and by this plan we straighten them after every third passage of the marker.

SOWING THE SEED. This should be done as soon as SOWING THE SEED. This should be done as soon as the ground can be gotten ready and can be done best by a hand seed drill. This should be carefully adjusted to sow the desired quantity of seed about one-half inch deep. The quantity needed will vary with the soil, the seed used and the kind of onions desired. Thin seeding gives much larger onions than thick seeding. Four or five pounds per acre is the usual quantity needed to grow large onions. We use a drill with a roller attached, but if the drill has none, the ground should be well rolled with a light hand roller immediately effer the seed is planted. mediately after the seed is planted.

CULTIVATION. Give the onions the first hoeing, just skimming the ground between the rows, as soon as they can be seen in the row. Hoe again in a few days, this time close up to the plants, after which weeding must be begun. This operation requires to be carefully and thoroughly done. The weeder must work on his knees astride the row, stirring the north around the plants, in order to destroy any words. The weeder must work on his knees astride the row, stirring the earth around the plants, in order to destroy any weeds that have just started. At this weeding or the next, according to the size of the plants, the rows should be thinned, leaving from eight to twelve plants to the foot. In ten days or two weeks they will require another hoeing and weeding similar to the last and two weeks later give them still another hoeing and if necessary another weeding. If the work has been thoroughly done at the proper time, the crop will not require further care until ready to gather.

GATHERING. As soon as the tops die and fall, the bulbs should be gathered into windrows. If the weather is fine they will need no attention while curing, but if it is not they will need to be stirred by simply moving them slightly along the row. Cut off the tops when perfectly dry, about half an inch from the bulb and then after a few days of bright weather the copies will be fit to store for winter. bright weather the onions will be fit to store for winter.

It will not do to store onions in large piles or masses, particularly in warm weather, or if they are the least moist, but if perfectly dry when gathered and they are spread not to exceed two feet in depth, they can be kept in fine condition till spring. Any arrangement will answer that will keep them dry and at a uniform temperature of about 32° Fr., or they may be kept frozen, care being taken not to disturb them. They should be thawed gradually. Repeated freezing and thawing will spoil them.

EXTRA EARLY RED

Large Red Wethersfield This is the standard favorite onion in the east, where immense crops are grown for shipment. Bulb large, flattened yet quite thick; skin deep purple red; flesh purplish white, moderately fine grained and rather strong flavored. Very productive, the best keeper and one of the most popular for general cultivation. The variety does best on rich, moderately dry soil, but on low muck land it is more apt to form large necks than the Danvers. There is no better sort for poor and dry soils. Pkt. 5c; Oz. 20c; 2 Oz. 35c; ½ Lb. 60c; Lb. \$2.00

## -Continued

Southport Red Globe The onions from Southport, Conn., generally command an extra price in New York markets because of their beautiful shape and color, due partly to the variety grown and partly to the favorable soil and extra care taken in handling the crop. The Southport Red the favorable soil and extra care taken in handling the crop. The Southport Red Globe is of medium size, spherical, with small neck, very deep, rich red color and of superior quality. We offer a strain of exceptionally fine color and excellent quality; much superior to that usually soild. (See colored plate opposite)

Pkt. 5c; Cz. 20c;
2 Oz. 35c; 4 Lb. 60c; Lb. \$1.85

2 Oz. 35c; ½ Lb. 60c; Lb. \$1.85

Large Yellow Dutch, One of the oldest sorts.

Large, quite flat; flesh
or Strasburg white, fine grained, mild and well
most on the market, is distinctly superior in size of bulb,
uniformity of shape and evenness of color. Pkt. 5c;
Oz. 15c; 2 Oz. 25c; ½ Lb. 40c; Lb. \$1.50

Yellow Danvers

A fine productive variety of mesh creamy-white, comparatively mild and well flavored. The bulbs are rather flat with small necks and ripen down very evenly. This is still a standard, general crop, yellow onion where a strictly globe shaped bulb is not demanded. Pkt. 5c; Oz. 15c; 20 Z. 25c; 4 Lb. 40c; Lb. \$1.50

Yellow Globe Danvers

flat and it has been thought by many that its small neck and splendid ripening habit could only be obtained in onions of that shape. We have by careful selection and breeding developed a strain which has to a remarkable degree the ripening habit and small neck of the original Danvers and yet is decidedly more globular in form, thus giving larger yields and handsomer bulbs without sacrificing any of the good qualities of the most popular of yellow onions. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.50 Lb. \$1.50

Michigan Yellow Globe Finest shape, best crop of any yellow onion. The heaviest yield of onions is always obtained from rich, black lands. On such soils it is found that a globe shaped onion with a somewhat flattened base gives the largest returns and to meet the detened base gives the largest returns and to meet the demands of the professional onion growers located on such lands, we have developed this variety. The bulbs are large and uniformly spherical, with very small necks; the largest diameter below the center of the bulb; of a rich, orange-yellow color; enormous yielders and splendid keepers. No onion grower can afford to plant inferior seed when such as this can be procured. (See colored plate opposite) Pkt. 5c; Oz. 20c; 2 Oz. 35c; 4 Lb. 60c; Lb. \$1.75

Southport Yellow Globe This variety is of the same general character and quality as the Southport Red Globe, but the color is a rich yellow.

Pkt. 5c; Oz. 20c; 2 Oz. 35c; 4 Lb. 60c; Lb. \$1.75

Mammoth Yellow Spanish, A very handsome or Prizetaker size and nearly globular in form. Skin and tender. It is one of the best of the large European sorts. If started very early in hotbeds it will produce a mammoth onion the first season. Pkt. 5c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.25

WHITE PORTUGAL

White Portugal, or A medium sized onion of mild flavor and with beautiful, clear white skin, a favorite with many for use when young as a salad or bunching onion and for pickles; it is also a good keeper and fine for fall and early winter use. An excellent sort for gardeners who do not care to plant more than one variety. Pkt. 5c; Oz. 30c; 2 Oz. 55c; ½1.h. \$1.00 Lb. \$3.00 A medium sized onion of mild

White Globe Yields abundantly, producing handbulbs. The flesh is firm, fine grained, of mild flavor and as a table variety its clear white color is exceptionally attractive. Sometimes called Southport White Globe. To produce the beautifully white onions so much sought in every market, one must first of all have good seed; second, grow them well on rich lands; third, exercise great care in harvesting and curing the crop. In Southport they "cord" up the onions in long rows, the bulbs on the inside and cover with boards, so that the bulbs in the open air are well protected from rain or dew which would be sure to discolor them. We have by years of careful selection and breeding developed a strain which has no equal in uniformity and beauty of shape and color. (See colored plate opposite) Pkt. 5c; Oz. 30c; 2 Oz. 55c; 4 Lb. \$1.00; Lb. \$3.00

The flavor of the Italian varieties is mild and they are in every way well adapted for culinary purposes. The following varieties have been tested in this country and have given perfect satisfaction.

Queen

An extra early, very white skinned variety of especial value for pickling. If seed is sown out of doors in spring it will produce bulbs about an inch in diameter. If these bulbs are set out the following spring, or if plants are grown under glass in winter and set out in the spring, they will produce large onions. This variety is the one most generally used in this country for producing the small pickling bulbs. For this purpose growers usually plant the seed thickly in drills fifteen inches apart and use forty to fifty pounds to an acre. Pkt. 5c; Oz. 20c; 2 Oz. 35c; 3 Lb. 60c; Lb. \$1.75

Early Neapolitan Marzajola
A very early, flat, white-skinned variety, desirable for early use and for pickling. It can be sown in February or March and will mature a crop very early in the season. In the south the seed can be sown in autumn and large onions produced in March. Known also as Early May. Pkt. 5c; Oz. 15c; 2 Oz. 25c; ½ Lb. 40c; Lb. \$1.50

Giant White Italian Tripoli A large, beautiful, pure white, flat onion of mild and excellent flavor. Will produce a somewhat larger bulb from seed than our White Portugal, but to attain full size the seed should be started very early in a hotbed and the plants set out in rich soil. Pkt. 5c; Oz. 15c; 2 Oz. 25c; ½ Lb. 40c; Lb. \$1.50

Mammoth Silver King

A very large onion, resembling the White Italian Tripoli, but is larger, slightly later and rather a better keeper, making it more desirable for the later fall market. The skin is silvery white; flesh pure white, very tender and mild flavored. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.50

ONION SETS

To raise onion sets from seed, use good ground prepared as for large onions and sow the seed very thick in broad drills, using forty to sixty pounds per acre. If the seed is sown thin, the bulbs will not only be too large for sets but will not be of the right shape and if sown thick on poor land they will be necky or bottle shaped. Onion seed sown for sets may be planted somewhat later than if a crop of large bulbs is desired.

RED BOTTOM SETS. Treated precisely as top onions are, setting them out in the spring instead of sowing seed. Per Lb. 25c. postpaid: 100 Lbs. \$12.00

YELLOW BOTTOM SETS. Like the preceding except in color and used in the same manner. Per Lb. 25c. postpaid: 100 Lbs. \$13.00

The 100 pound prices of Onion Sets are a feet of the market. The price per single pound will hold good throughout the season.

The 100 pound prices of Onion Sets are by freight or express at purchaser's expense for transportation.

MICHIGAN YELLOW GLOBE

SOUTHPORT RED GLOBE

# THE THREE BEST GLOBE ONIONS

Design from a Photograph taken at our Oakview Stock Seed Farm

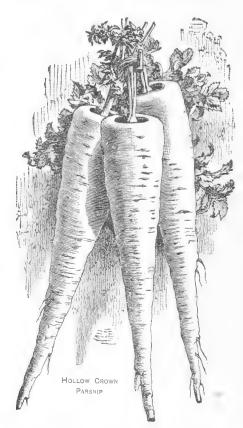

Very useful for flavoring soups and stews and for garnishing. The green leaves are used for flavoring or they may be dried crisp, rubbed to powder and kept in bottles until needed.

Parsley succeeds the best on rich, mellow soil. The seed is even slower than parsnip in germinating and should be sown as early as possible in the spring, in drills one to two feet apart and when the plants are well up thin to one foot in the row. When the plants are about three inches high cut off all the leaves; the plant will then start a new growth of leaves which will be brighter and better curled and later, if these turn dull or brown they can be cut in the same way; every cutting will result in improvement. The Moss Curled variety makes beautiful border plants.

Leaves flat, deeply cut but not curled; Plain

Leaves flat. deeply cut but not curred, often preferred on account of the very dark green color as well as the hardiness of the plant and its superiority for flavoring. The curled sorts are more extensively used for garnishing. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 60c.

CHAMPION MOSS CURLED

Champion Moss Curled

A handsome, compact growing variety which has finely cut and densely curled leaves of a deep green color. Owing to its uniformly fine color and very attractive foliage, this is one of the most popular sorts for both the market and home garden. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c.

TURNIP ROOTED OR HAMBURG

Turnip Rooted, or Hamburg The root is the edible portion of this variety and resembles a small parsnip both in color and shape. Flesh white, a little dry and having a flavor similar to celeriac. The foliage is practically the same as that of Plain Parsley. Very hardy and should be cultivated like parsnip. Extensively grown and used for flavoring soups and stews. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

## PARSNIP

The value of the Parsnip as a culinary vegetable is well known but is not generally appreciated at its full value for stock feeding. On favorable soil it yields an immense crop of roots which are more nutritious than carrots or turnips and particularly valuable for dairy stock.

for dairy stock.

Parsnips are usually grown on deep rich, sandy soil, but will make good roots on any soil which is deep, mellow and moderately rich. Fresh manure is apt to make the roots coarse and ill shaped. As the seed is sometimes slow to germinate, it should be sown as early as possible in drills two and one-half feet apart, cover one-half inch deep and press the soil firmly over the seed. Give frequent cultivation and thin the plants to three or four to the foot.

Long White Dutch, or Sugar Root very long, white, most excellent flavor. Very hardy and will keep well through the winter without protection. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ¼ Lb. 20c; Lb. 50c.

Hollow Crown, or Guernsey Root white, very tender, skin. The variety is easily distinguished by the leaves growing from depression on top or crown of the root. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 50c.

For early peas the soil should be light and warm, but for general crop a moderately heavy soil is better. Fresh manure and very rich or wet mucky soil should be avoided, as they cause a rank growth of vine at the cost of the quality of the peas; such soil is often the cause of early sorts maturing unevenly. Sow as early as possible a few of some early variety on warm, quick soil, prepared the fall beties comparatively early, depending for succession upon selecting sorts that follow each other in maturity. The peas will give quicker returns if covered only one inch deep and where earliness is most important they may be treated in that way. Larger pods and more of them will be produced if the seed be planted in trenches three to six inches deep and covered with only one or two inches of soil; when the plants are five or six inches high fill the trench level with the surface; this will secure deep rooting, prevent mildew and prolong the bearing season. If the peas be covered to the full depth at first, or if water be allowed to stand in the trenches they will not germinate or grow well.

### EXTRA EARLY **VARIETIES**

Ferry's First and Best of white, extra early peas in existence, maturing so well together that sometimes a single picking will secure the entire crop. Vines vigorous and hardy, two and one-half to three feet high, bearing three to seven straight pods, each containing five to seven medium sized, smooth peas of fair quality. The seed is small sized, smooth, yellowish-white. The stock we offer is much superior to most on the market and has proven to be more even than the similar strains formerly sold as Extra Early, Rural New Yorker and Improved Early Daniel O'Rourke, Pkt. 10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$8.00

Earliest of All, By careful selec-tion and growing or Alaska we have developed a stock of this smooth blue pea of this smooth blue pea of unequaled evenness in growth of vine and early maturity of pods which are filled with medium sized, bright green peas of good flavor. Vines two and one-half to three feet high. Seed and one-hal to three feet high. Seeta small, smooth, and bluish green in color. Matures all the crop at once and is an invaluable variety for market gardeners and canners. Pkt.10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$7.50

Thomas Laxton An early wrinkled variety of great merit. Vine variety of great merit. Vine three to three and one-half feet high, similar to that of Gradus, high, similar to that of Gradus, but darker in color, hardier and more productive. Pods large, long, with square ends, similar to but larger, longer, and darker than those of the Champion of England and as uniformly well filled. The green peas are very large, fine colored and unsurpassed in quality. We are certain that the earliness and productiveness of this pea needs only to be known to make it one of the most popular sorts for the market and home garden, as in appearance den, as in appearance and quality it is one of the very best varieties yet produced. Pkt. 10c; Pt. 35c; Qt. 55c; 4 Qts. \$2.00; Bu. \$10.50

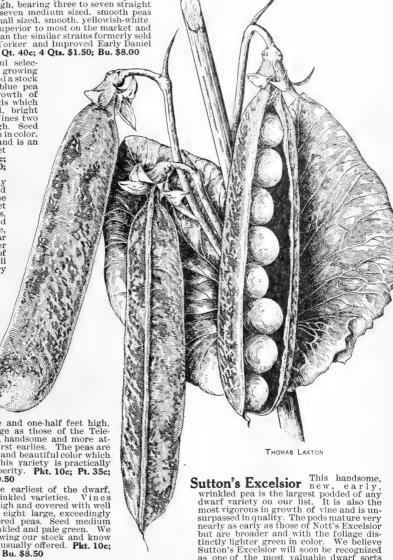

Gradus An extra early, wrinkled pea.

The vine is similar in appearance to Telein appearance to Telephone but only three to three and one-half feet high. The immense pods are as large as those of the Telephone, uniformly well shaped, handsome and more attractive than those of the first earlies. The peas are very large, of splendid quality and beautiful color which they retain after cooking. This variety is practically the same as that sold as Prosperity. Pkt. 10c; Pt. 35c; Qt. 55c; 4 Qts. \$2.00; Bu. \$10.50

American Wonder The earliest of the dwarf, wrinkled varieties. Vines branching about nine inches high and covered with well branching about fine inches figh and covered with well filled pods containing five to eight large, exceedingly sweet, tender and well flavored peas. Seed medium sized, generally flattened, wrinkled and pale green. We have taken great pains in growing our stock and know it to be much better than that usually offered. Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Bu. \$8.50

Nott's Excelsior The best early, dwarf pea. It com-bines the good qualities of the American Wonder and Premium Gem peas. The vines are larger and more productive than American Wonder and earlier than Premium Gem and average about twelve inches high. The peas, in sweetness and quality are unsurpassed. Seed wrinkled, green and somewhat flattened. A most desirable sort for the market gardener and unsurpassed for the home garden. Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Bu. \$8.50

as one of the most valuable dwarf sorts yet introduced. (Sold out) Premium Gem (Improved Little Gem) A very desirable early green wrinkled variety similar to but better than McLean's Little Gem. The vine is very productive and grows to a height of from fifteen to eighteen inches. The pods are of medium size and crowded with six to eight very large peas of fine quality. The seed is green, large, wrinkled, often flattened. Pkt. 10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$8.00 If Peas are wanted by mail or express prepaid add 10 cents per pint, 15 cents per quart for charges.

McLean's A green, wrinkled variety about two and one-half to three feet high, with long, broad pods which are abundantly produced and productiveness, the fine appearance of its pods and is popular with consumers on account of its quality. It is also largely used by canners. By careful selection we have developed a strain showing marked improvements in vigor of plant, size of pod and productiveness. Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Bu. \$8.50

Yorkshire Hero Vines stout, about two and one-half feet nigh, bearing at the top a number of broad pods filled with large peas that remain a long time in condition for use and which never become as long time in condition for use and which never become as hard as most sorts. The peas are of fine quality and will be preferred to any other by those who like a rich, marrow-like pea. Seed large, wrinkled and flattened. Pkt. 10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$7.50

Bliss' Everbearing

Vine stout, about two and one half feet high, bearing at the top six to ten broad pods. If these are picked as they mature and the season and soil are favorable, the plant will throw out branches bearing pods which will mature in succession, thus prolonging the season. The peas are in succession, thus prolonging the season. The peas are very large and wrinkled, cook very quickly, are tender, of superior flavor and preferred by many to any other sort. Pkt. 10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$7.50

The Admiral Vines vigorous, about four feet he Admiral about four feet high. Pods usually borne in pairs, curved, bright green, crowded with six to nine peas of the very best quality and color. We know of no pea which remains palatable longer after it becomes large enough to use. Seed much wrinkled, of medium size, cream color. Owing to its great vigor, productiveness, fine color, quality and suitable size of the green peas, it is admirably adapted for canners' use. Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Bu. \$8.50

Duke of Albany A very large, Pea Similar to Telephone in growth and season but darker in color of foliage and pods. Vine four and one-half to five feet high, vigorous and strong growing; pods very large, straight and thick, borne in great profusion and when in condition for picking, lof a deep green color. There is an increasing demand for peas of this color and the productiveness of this variety makes it a very profitable sort for market gardeners while if

sort for market gardeners while its splendid quality should give it a place in every home garden. In many localities this variety is sold garden. In many locations this variety is soft as an improved strain of Telephone, especially by market gardeners who find its darker color a distinct advantage in that the pods retain a marketable appearance longer after picking than do those of lighter colored sorts. Pkt. 10c; Pk. 30c. 04. 45c. 4. 0c. \$1.50. Ru. \$8. Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Bu. \$8.50

The Telephone has become the leading pea with market gardeners whose trade appreciates fine appearance and high quality. Vines vigorous, growing about four feet high, with large, coarse, light colored leaves and producing an abundance of very large pods filled with immense peas which are tender, sweet and of excellent flavor. It comes into use soon after the Premium Gem and is one of the best sorts for either home or market. Notwithstanding the large amount of inferior and spurious stock which has been sold, no pea has attained greater popularity than this, thus showing that it has sterling merit. The stock we offer has been carefully selected and is very prolific. Pkt. 10c; Pt. 30c; Qt. 45c; The Telephone has become the

4 Qts. \$1.50; Bu. \$8.50

Telegraph, or Long stronger growing and hardier vine with darker foliage and Island Mammoth pods than the Telephone; peas very large and of dark green color; seed almost smooth. A splendid sort for the market garden; will give good returns even under conditions that would cause most varieties to fail. Pkt. 10c; Pt. 25c; Qt. 35c; 4 Qts. \$1.25; Bu. \$7.00

ALDERMAN Alderman spects the very best early main crop variety of the valuable Telephone type. The vines grow nearly five feet high, are dark green, vigorous and exceedingly productive. Pods very large, long, dark green, similar to Duke of Albany and about the same in season. The peas are of largest size and unsurpassed in quality. Market gardeners are demanding the large podded, dark colored sorts which retain their fine appearance even after shipping a long retain their fine appearance even after shipping a long distance. The Alderman answers these requirements and furthermore is the most productive variety of this class. We recommend it unreservedly. Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Bu. \$9.00

If Peas are wanted by mail or express prepaid add 10 cents per pint, 15 cents per quart for charges.

## A S-LATER VARIETIES

Daisy A semi-dwarf, very large podded main crop pea similar to Improved Stratagem but a little earlier maturing and lighter in color of vine and pod. A vigorous growth is characteristic of this variety. Market gardeners, even when the season is not the most favorable, can depend on it for a splendid yield of handsome pods filled with large peas of the finest quality. (Short crop; sold art)

Improved Stratagem Most stocks of the large podded, semi-dwarf, English varieties of peas have been so wanting in uniformity and evenness of type as to disgust American planters, but by constant effort we have developed a stock which comes true and we do not hesitate to pronounce it one of the best of the large podded sorts. The pods are of largest size and uniformly filled with very large, dark green peas of the finest quality. Pkt. 10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$8.00

Pride of the Market stiff, with large, dark green leaves and bearing at the top, generally in pairs, a good crop of large, dark green pods well filled with large peas of good flavor. We have given this variety special attention and the stock we offer is so much superior to that commonly sold as to seem a different sort. We recom-mend it as one of the very best

of the large podded varieties. (Short crop; sold out.)

Dwarf Champion

This is a comparatively new green wrinkled pea and wherever known is proving a popular main crop sort for the market or home garden. The vine is only about three feet high, vigorous, hardy, and unusually productive. Pods fully four inches long, broad, quite straight, deep green in color, handsome and very well filled with large peas which are tender and unsurpassed in quality. The stock we offer is vastly superior in productiveness, size of pod and quality to much that is sold under this name. Pkt. 10c; Pt. 25c; Qt. 40c; 4 Qts. \$1.50; Bu. \$7.50

The vine is of Horsford's Market Garden giving the greatest number of pods of any on our list. Pods contain five to seven medium sized, sweet, dark green peas which retain well their color and sweetness after canning. Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Rr. \$8.50 Bu. \$8.50

Melting Sugar in this country but much used abroad in which the sweet, brittle and succulent pods have none of the tough, inner lining found in the ordinary varieties of garden peas; they are used in the same way as snap or string beans. The best of these edible podded sorts is the Melting Sugar of which we offer a very fine strain. The pods are very large, extremely tender, finely flavored and are borne in great abundance on vines four to five feet high. Pkt. 10c:

five feet high. Pkt. 10c; Pt. 30c; Qt. 45c; 4 Qts. \$1.50; Bu. \$9.00

Champion of Very England ductive and universally admitted to be one of the richest and best flavored peas. Height four to five feet; seed light green and much shriveled. Very inferior and mixed stocks of this cort are frequently of sort are frequently of-fered but when the seed is as well grown and se-lected as that we offer we consider the variety equal in quality to any in cultivation and one of the best of its season, either for the amateur or market gardener. Pkt. 10c;
Pt. 25c; Qt. 35c;
4 Qts. \$1.25; Bu. \$7.00

Large White about Marrowfat five feet high and of strong growth. Pods large, cylindrical, rough, light colored and well filled; seed large, smooth, round and light yellow. The variety is excellent for summer use but is inferior in quali-ty to most of the newer ty to most of the newer sorts, although undoubtedly one of the most productive of the garden varieties. Pkt. 10c; Pt. 15c; Qt. 20c; 4 Qts. 60c; Bu. \$3.75

Vines

Large Blackeye Marrowfat An exvariety, growing about five feet high; a very prolific bearer of large pods; one of the very best Marrowfat sorts. Pkt. 10c; Pt. 15c; Qt. 20c; 4 Qts. 60c; Bu. \$3.75

FIELD PEAS

Field Peas deserve more general attention for fodder than they now receive. In the north for dairy cows and for hogs, they are fully equal to corn, and about six weeks earlier. For cows, the crop should be cut and fed green. For

hogs alone it can be used as pasturage.

Field Peas can be seen as pasturage.

Field Peas can be sown either alone or with oats as early as the condition of the soil will permit. If the stubble from green winter rye or other crops cut in June be turned under and sown to mixed peas and oats, it will furnish a large amount of forage in August when grass pasture is usually short.

As fertilizer, field peas should be plowed under when in blossom. They will grow on land that will not produce clover.

No. 1 White and Common White, write for quotations.

If Peas are wanted by mail or express prepaid add 10 cents per pint, 15 cents per quart for charges.

DWARF CHAMPION

## PEPPER

Peppers are used very extensively as a condiment. In Mexico, the hot varieties are eaten raw as we would eat radishes, but the greatest use is for seasoning other dishes. The large, thick fleshed, sweet varieties are eaten more extensively farther north and are served in various ways, green or ripe, with vinegar and salt, like tomato salad, or made into mangoes by cutting one side, removing seeds and filling with chow oboy nickles.

chow pickles.

The culture of peppers is the same as for egg plant and the plants need quite as much heat to perfect them. Guano, hen dung, or any other bird manure hoed into the surface soil when the plants are about six inches high, will wonderfully increase the product and also improve the quality of the

Red Cherry

A second early sort. Plant tall, bearing a profusion of round, bright red fruit which are very pungent when ripe. The plant, when in fruit, is yery ornamental.

Pkt. 5c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50

Red Chili A late variety, used in the manufacture of pepper sauce. The bright, rich red pods are about two inches long, one-third to one-half inch in diameter at the base, tapering to a sharp point and exceedingly pungent when ripe. Pkt. 5c; Oz. 25c; 2 Oz. 40c; & Lb. 75c;

Long Red Cayenne A well known variety having a slender, twisted and pointed pod about four inches long and when ripe, bright red in color. Extremely strong and pungent flesh Pkt. 5c; Oz. 25c; 2 Oz. 40c; \(^1\_4\) Lb. 75c; Lb. \(^1\_2.50\)

LARGE BELL, OR BULL NOSE PEPPER

Red Squash, or Tomato Shaped for the taste, although somewhat pungent; early, and very productive. Pkt. 5c; Oz. 25c; 2 Oz. 40c; early, and very productive. 4 Lb. 75c; Lb. \$2.25

Large Bell, or Bull Nose

Our stock of this well known variety, sometimes called Sweet Mountain, is a great improvement on the best stock obtainable only a few years ago. Plant vigorous, compact, very productive, ripening its crop uniformly and early. Fruit large, with thick, mild flesh, of excellent quality for use in salads and pickles; color bright red when ripe. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.50

Ruby King six inches in length and quite symmetrical in shape. It is very bright colored and the flesh is sweet and mild flavored. Pkt. 5c; Oz. 30c; 2 Oz. 55c; 4 Lb. \$1.00; Lb. \$2.75

Giant Crimson evenness of size and shape. The plant is vigorous and upright growing, larger than that of Chinese Giant and more productive. The fruits ripen earlier than any of the very large sorts on the market and average heavier, as the flesh is unusually thick. Color deep crimson when matured; flavor very mild.

thick. Color deep crimson when matured; flavor very mild. (See colored plate, page 7) Pkt. 5c; Oz. 55c; 2 Oz. \$1.00; Lb. \$1.60; Lb. \$5.50

Sweet Mountain, or Spanish Mammoth or more in length by two in diameter; very smooth and handsome, being when fully mature of a rich red color. Flesh very thick, sweet and mildly flavored. Pkt. 5c; Oz. 25c; 2 Oz. 40c; ½ Lb. 75c; Lb. \$2.50

## PUMPKIN

Pumpkins are not so particular in regard to soil as melons or cucumbers, but are cultivated the same, though on a larger scale. They are raised between hills of corn or in fields by themselves, but more properly belong to the farm than the garden as they readily mix with and injure the quality of the finer squash.

Pie We consider this a true pumpkin rather than a squash as it is sometimes covered with a fine gray netting. Flesh light yellow, very thick, sweet and finely flavored. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

Sugar, or New England Pie Sweet, fine grained and of the very best quality. Skin deep orange, slightly ribbed; flesh rich, deep yellow, excellent boiled or for pies. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 65c.

Large Yellow for feeding stock. The shape is irregular, some being round and others elongated or flattened. It is of deep, rich yellow color, fine grain and excellent quality. Pkt. 5c; Oz. 10c; 2 Oz. 10c; ½ Lb. 15c; Lb. 40c. By freight or express, at purchaser's expense, \$20.00 per 100 lbs.

expense, \$22.50 per 100 lbs.

SUGAR, OR NEW ENGLAND PIE PUMPKIN

# RADISH

For forcing sow in hotbeds or under glass in rich, sandy soil made perfectly level. Scatter evenly over the surface from fifty to one hundred seeds to the square foot and cover with one half inch of soil sifted on. Careful watering to keep soil moist, even, moderate temperature and good ventilation are required for rapid and best root development. If the bed is a good one the whole crop can be marketed in twenty-one to forty days after planting. For open ground culture sow on rich, sandy soil as soon in the spring as it is fit to work, in drills twelve to eighteen inches apart and thin out the plants to prevent crowding. A good dressing of nitrate of soda will greatly stimulate growth and insure tender, brittle roots. Successional sowings from one week to ten days apart will keep up a supply. After the hot weather of summer begins, it is better to sow the summer and winter varieties, as they do not become tough and stringy nor pithy so quickly as the early sorts. Radishes are subject to root maggots which make them useless for culmary purposes. We know of no certain remedy for this pest. We have found that the best preventive measures are to avoid the use of rank manure and not to sow on ground where radishes, turnips or cabbages were grown the year previous. We have been very careful to secure the very best seed possible and there is none sold under other names which is better than that of the varieties we offer. that of the varieties we offer.

Non Plus Ultra, or Early Deep An excellent extra early forcing radish. Root small, nearly round; color bright scarlet. Tops very small; flesh Scarlet Turnip, Forcing white, crisp and well flavored. One of the most handsome of the forcing sorts. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c. ¼ Lb. 25c; Lb. 85c.

Prussian Globe This is the smallest forcing radish offered. Top distinctly small; root round or slightly flattened, very deep red in color and of the best quality. Remains in condition for use the longest of any of the first early forcing sorts and is a favorite where a very small, deep red radish is desired. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

Early Scarlet iety are slightly olive
Globe shaped, a rich, bright scarlet in color; flesh
white and tender, fit to pull as early as Non
Plus Ultra but much larger when matured. We
specially recommend this to gardeners as a large, first
early forcing radish. Pkt. 5c; Oz. 10c; 2 Oz. 15c;

Early Scarlet Turnip, A beautiful variety, deep scarlet with white White Tipped, Forcing tip. Very nearly as wards arryas Non Plus Ultra, has as small a top and may be planted as closely. most attractive in appearance and cannot fail to give satisfaction as a forcing radish; very popular as a mar ket sort. Sold sometimes as Rosy Gem, Rapid Forcing, Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 80c.

Early Deep Scarlet, Olive lent deep red, Shaped, Short Leaf olive shaped forcing sort, typical in its very small tops and early maturing roots, which should be pulled into as soon as the condition. just as soon as in condition. 2 Oz. 15c; 4Lb. 25c; Lb. 75c. Pkt. 5c; Oz. 10c;

Early White Turnip Rooted An early, pure white radish, a little more flattened than Early Scarlet Turnip Rooted, and but little if any later maturing. While generally

FARIY SCARLET TURNIP, WHITE TIPPED

used for early outdoor planting, its small top makes it suitable for forcing. Flesh white, semi-transparent, crisp and tender. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c.

FRENCH BREAKFAST

Early Scarlet Turnip Rooted

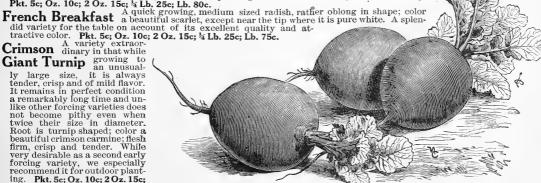

cultivation on account of its rich color and crisp, tender flesh. Very desirable for early outdoor planting, as well as forcing. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 70c.

Early Scarlet Turnip,

One of the handsomest of the turnip radishes and a great favorite in many large markets for early planting outdoors. It is but little later than Early Scarlet Turnip, White Tipped Tipped, Forcing and will give entire satisfaction where extreme earliness and small tops are not the chief considerations. Roots slightly flattened on the under side; color very deep scarlet with a distinct white tip; flesh white and of the best quality. The stock we offer is exceptionally attractive in its splendid coloring. The scarlet is unusually deep and affords a very distinct and pleasing contrast with the large, clear white tip. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 80c.

French Breakfast a beautiful scarlet, except near the tip where it is pure white. A splendid variety for the table on account of its excellent quality and at-

Giant Turnip growing to an unusually large size, it is always tender, crisp and of mild flavor. It remains in perfect condition a remarkably long time and un-like other forcing varieties does not become pithy even when twice their size in diameter. Root is turnip shaped; color a beautiful crimson carmine; flesh firm, crisp and tender. While yery desirable as a second early recommend it for outdoor planting. Pkt. 5c; Oz. 10c; 2 Oz. 15c; Lb. 25c; Lb. 80c.

EARLY SCARLET GLOBE

# RADISH-Continued

Half Long Deep Scarlet The roots of this desirable variety are of a very deep, ing point; the flesh is very white, crisp and tender, and holds its juiciness well. It does not become pithy till quite overgrown.

Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c;

Long Brightest est and hand-Scarlet, White Tipped scarlet radishes known and a decided improve-ment in earliness and color over other varieties of this class. Roots mature in about twenty-five days from time of planting and continue in good condi-tion until full grown when they are as large in diameter but a little shorter than Early Long Scarlet; has a small top and can be used for forcing. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

Early Long Scarlet, This variety is a standard Short Top, Improved and exsort iop, improved cellent sort either for private gardens or the market. The roots grow half out of the ground, are very uniform in shape, smooth and very bright red in color and continue crisp and tender until fully matured, when they are about six inches long. This is the variety which is grown so extensively in Petite Cote, Ontario, where the finest radishes in America are grown. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

Wood's Early Frame

a good variety for forcing, being shorter
and thicker than the old Long Scarlet Short Top, but is one of the very best sorts for first crop out of doors. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c.

Cincinnati Market to Early Long Scarlet Short Top, Improved, but deeper red in color and remains a little longer in condition for use. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 80c.

Improved Chartier, or Shepherd one of the very best for sowing outdoors. Roots are in good condition for the table very early and continue on the state in good condition for the table very early and continue crisp until they reach a diameter of about an inch and a quarter, thus affording good roots for a long time. The roots are long, cylindrical, scarlet rose in color and gradually taper and shade into white at the tip. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

Early Golden Yellow Oval Matures quickly, has a small top and neck and resists the summer heat better than the scarlet or white kinds. Root oval, very smooth and handsome; bright, light yellow in color and of excellent quality. Our stock is grown from selected roots and is very fine. Pkt. 5c; Oz. 10c; 2 Oz. 15c; Lb. 25c; Lb. 75c.

A handsome, long, pure white Icicle
A handsome, long, pure white radish. Roots somewhat shorter er with smaller tops than Long White Vienna and maturing a little earlier. One of the most desirable of the white summer sorts. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 80c. ICICLE

Early White Giant Stuttgart shaped; skin white; flesh white and crisp and not becoming pithy until very late, so that those not used as a summer radish can be stored for winter use. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

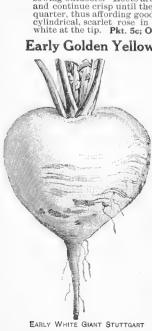

White Strasburg then comparatively small this variety is in good condition of the best large, summer sorts. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

Golden Globe This variety is of quick growth, affording crisp and tender until matured when the roots are four to five inches long and about two inches in diameter. This is considered one of the best large, summer sorts. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 76c.

Golden Globe This variety is of quick growth, affording crisp and tender radishes even in the hottest climate and is extensively grown in the south. Root uniformly globe shaped, with skin golden yellow in color. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

Large White Summer Traveir Breen for first part of the carliest of the carriest of

Large White Summer, Turnip Rooted One of the earliest of the summooth, very white and handsome; flesh crisp, tender and rather pungent in flavor. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 80c.

EARLY LONG SCARLET, SHORT TOP, IMPROVED

## RADISH-Continued

### WINTER VARIETIES

Scarlet China

Roots cylindrical, or largest at the bottom, tapering abruptly to a small tap. Skin very smooth and of a bright rose
color; flesh firm, crisp and pungent. May be sown thicker than most other
winter varieties. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 80c.

Celestial

A comparatively new variety which is popular wherever known.
The root is long, cylindrical, with beautiful white skin and flesh,
so white as to attract attention, even among other white varieties. Flesh very
tender and of excellent quality. Pkt. 5c; Oz. 10c; 2 Oz. 20c; ½ Lb. 30c; Lb. \$10.00

Large White Spanish
Root long, and when full grown measuring two
to two and one-half inches in diameter. Skin
white, flesh white, solid and pungent, though milder than the Black Spanish.
Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c.

Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c.

California Mammoth White China
California. It is pure white, about one foot long and two or three inches through, tapering regularly to the tip. The flesh is tender and crisp, keeping well through the winter. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c.

Round Black Spanish shaped, three or four inches in diameter; skin black, flesh white, very compact and highly flavored. An excellent sort for winter, as the roots keep a long time. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c.

Half Long Black Winter Grayish black skin and crisp, pungent but well flavored white flesh. Roots about six inches long and two to three inches thick. This variety is intermediate in shape between the Round and the Long Black Spanish, and seems to combine the good qualities of both. (Sold Out.)

Long Black Spanish One of the latest as well as the hardiest of radishes, an excellent sort for winter use. Roots of medium size, oblong, black and flesh of firm texture. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c.

## RHUBARB, or Pie Plant

Rhubarb, also known as Pie Plant, or Wine Plant, is grown for its leaf stalks which are stewed and also used for pies and tarts. Immense quantities are now annually sold in all of the large markets. No private garden should be without it.

Rhubarb succeeds best in deep, somewhat retentive soil and the richer this is and the deeper it is stirred, the better. Sow in drills an inch deep and thin out the plants to six inches apart. In the fall transplant into very highly manured and deeply stirred soil, setting them four to six feet apart each way and give a dressing of coarse manure every spring. The stalks should not be plucked until the second year and the plant never allowed to exhaust itself by running to seed. Our seed is saved from selected plants of the Linnæus, Victoria, Giant and other improved sorts, but like the seeds of fruit trees, rhubarb seed cannot be relied upon to reproduce the same varieties. SEED—Pkt. 5c; Oz. 15c; 2 Oz. 25c; ½ Lb. 40c; Lb. \$1.25 ROOTS—by express, not prepaid, 10c each, \$1.25 per dozen; by mail, prepaid, 15c each.

ROQUETTE
A hardy annual. The leaves are long, smooth and glossy and when young are used like mustard for salads. The plant grows to a height of from nine to fifteen inches. Sow the seed in shallow drills one foot apart, in early spring and for succession every three or four weeks thereafter. Water freely. The young leaves will be ready for cutting in about six weeks from time of planting. Pkt. 5c; Oz. 10c; 2 Oz. 20c; 4 Lb. 30c; Lb. \$1.00

## SALSIFY, or Vegetable Oyster

The roots are long, white and tapering; when cooked form a substitute for oysters, as the flavor is similar. Salsify succeeds best in a light, well enriched soil, which should be stirred to a good depth. Coarse and fresh manure should be avoided, as it will surely cause the roots to grow uneven and ill-shaped. Sow early and quite deep, giving the general culture recommended for parsnip. The roots are perfectly hardy and many remain out all winter, but should be dug early in spring, as they deteriorate rapidly after growth commences. Frost does not injure the roots, but before the ground freezes a quantity for winter use may be stored in a pit or in a very cool cellar.

LARGE LEAVED FRENCH SORREL

Mammoth Sandwich Island This valarge, strong growing and less liable to branch than the other sorts. It is invaluable for market gardeners' use. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.25

SORREL The improved varieties of Sorrel when well grown and cooked like spinage make a palatable dish. Sow in drills early in spring and thin the seedlings to six or eight inches apart in the row one may companie within in the row. One may commence cutting in about two months and the plants will continue in full bearing from three to four years.

Large Leaved French
The best garden variety,
having large, pale green leaves of fine
quality. Pkt. 5c; Oz. 10c; 2 Oz. 20c;
½ Lb. 30c; Lb. \$1.00

# SPINAGE

Should be planted in very rich ground, the richer the better. Sow in drills twelve to eighteen inches apart and thin to about six inches apart when the leaves are an inch wide. All should be cut before hot weather, while young and tender. For early spring use sow early in autumn and protect the plants with a light covering of leaves or straw, or plant as soon as the land can be worked in the spring. Under favorable conditions the leaves may be large enough for eating in eight weeks. South of Cincinnatispinage can be grown through the winter with very little or no covering.

Savoy Leaved The earliest variety and one of the best to plant is of upright growth, with thick, glossy, dark green leaves, pointed but quite broad, and crumpied or blistered like those of Savoy cabbage. It is hardy and grows rapidly to a suitable size for use, running to seed quickly in warm weather. Pkt. 5c; Oz. 10c; 2 Oz. 10c; ½ Lb. 15c; Lb. 40c.

Round Summer Broad Leaved

A desirable sort in the north for early spring sowing and popular with market gardeners. Leaves large, bright green and of good quality. Though not as hardy as the Prickly Winter, it stands exposure very well.

2 Oz. 10c; ½ Lb. 15c; Lb. 35c.

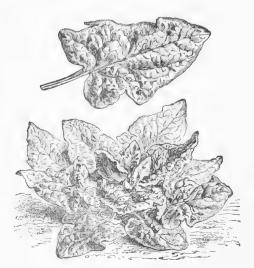

Broad Flanders One of the most compact and vigorous growing varieties. The leaves are nearly round, uniformly deep green, thick and somewhat crimped in the center. A very desirable sort, similar to but maturing a little earlier than Victoria. Pkt. 5c; Oz. 10c; 2 Oz. 10c; ½ Lb. 15c; Lb. 35c.

EARLY GIANT THICK LEAVED

Early Giant Thick Leaved A strong growing and early maturing sort, with very large, thick leaves of fine, deep green color. One of the most desirable medium early spinages. Pkt. 5c; Oz. 10c; 2 Oz. 10c; 4 Lb. 15c; Lb. 40c.

Improved Thick Leaved Avariety which rapidly, forming a cluster of very large, slightly wrinkled leaves of fine color and quality. Pkt. 5c; Oz. 10c; 2 Oz. 10c; 4 Lb. 15c; Lb. 35c.

LONG STANDING PRICKLY

SAVOY LEAVED

An excellent sort, forming a very large, exceedingly thick, very dark green leaf slightly curled in the center. It becomes fit for use nearly as early as any. remaining so much longer than most kinds and cannot fail to please, whether grown for the market or in the private garden. Pkt. 5c; Oz. 10c; 2 Oz. 10c; 4 Lb. 15c; Lb. 40c.

Long Season A very dark green, crumpled variety, in general appearance similar to Savoy Leaved but much larger and broader in leaf, and very much longer standing. One of the very best for early spring and successional planting, and of excellent quality. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 50c.

Long Standing An improved round seeded strain of excellent quality; after reaching maturity it remains in condition for use much longer than most sorts; leaves comparatively smooth and very dark, rich green. Very popular with market gardeners. Pkt. 5c; Oz. 10c; 2 Oz. 10c; 4 Lb. 15c; Lb. 35c.

VICTORIA

Long Standing Prickly

The plants mature a little later than the round leaved sorts, but yield a large quantity of very thick and finely colored leaves. Has prickly seed. Pkt. 5c; Oz. 10c; 2 Oz. 10c; ½ Lb. 15c; Lb. 40c.

Prickly Winter
protection of leaves or straw. It is desirable for fall sowing
which in this latitude is made about the first of September.
The seed is prickly. Pkt. 5c; Oz. 10c; 2 Oz. 10c; ½ Lb. 15c;
Lb. 35c

New Zealand (Tetragonia expansa) Entirely different from the true spinage in type and in that it thrives during hot weather and in any soil rich or poor. The tender shoots are of good quality and may be cut throughout the summer. Plant three or four seeds in hills two feet apart each way. Germination of the seed can be hastened by soaking in warm water twenty-four hours. Pkt. 5c; Oz. 10c; 2 Oz. 20c; ½ Lb. 30c; Lb. \$1.00

The squash is one of the most nutritious and valuable of all our garden vegetables. The summer varieties come to the table early in the season, while the winter sorts can be had in perfection from August until the summer varieties are again in condition. Few farmers appreciate the value of winter squash as food for stock. We think an aere of squash, costing no more to cultivate and much less to harvest, will usually give as much food available for feeding stock as an acre of corn and we strongly urge our readers to try a "patch" for this purpose.

Squash plants are very tender and sensitive to cold and so planting must be delayed until settled warm weather. The general methods of culture are the same as those given for cucumbers and melons, but squash is less particular as to soil. The summer varieties should be planted four to six feet apart each way and the winter sorts eight to ten. Three plants are sufficient for a hill. In gathering the winter sorts care should be taken not to bruise or break the stem from the squash, as the slightest injury will increase the liability to decay. Winter squashes should be stored in a moderately warm, dry place and the temperature kept as even as possible. For those who desire very early squashes, the seed can be planted in boxes, and transplanted.

Mammoth White Bush Scallop

The fruit is a beautiful, clear waxy white, instead of the yellowish white so often seen in the old Early White Bush Scallop. It is superior to that variety in size and beauty, and is quite uniformly warted. The handsomest of the scalloped squashes. The stock we offer is exceptionally true to type. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 1 Lb. 25c; Lb. 85c.

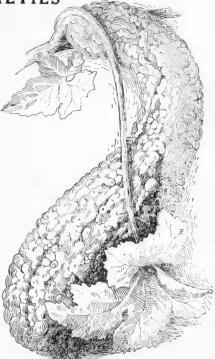

Early White Bush Scallop

dwarf habit and upright growth. Surface comparatively smooth;
color creamy white. The variety matures fruits a little earlier
than Mammoth White Bush Scallop. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 80c.

Long Island White Bush A variety that has become Vine very productive and the squashes are in condition for use earlier than any other summer variety. Fruits rather small and often nearly spherical, thick, with only a slight indication of a scallop. Skin white; flesh tender and of good quality. Our stock of this is very uniform. Pkt. 5c; Oz. 10c; 2 Oz. 15c; \$1b. 25c; Lb. 85c.

Early Yellow Bush Scallop A very early, flat, scalloped deep orange; flesh pale yellow and well flavored. We have developed a strain of the old Yellow Bush Scallop which is fully as productive but uniformly larger and flatter than the old stock and has a very small seed cavity. Its superiority is so great that we would be justified by prevailing custom in renaming it. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 85c.

White Summer Crookneck Introduced by us in 1895. This excellent variety is the result of years of careful breeding and selection and it is now one of the most fixed and distinct of our summer squashes. The fruit is similar in size and shape to the Summer Crookneck, but of an ivory white color and unsurpassed in quality. We recommend this sort as one of the best of the summer varieties. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 85c.

MAMMOTH SUMMER CROOKNECK

Summer The old standard sort; very productive and Crookneck matures the bulk of its crop a little earlier than the Mammoth Summer Crookneck. Fruits when fully grown are about one foot long, with grown are about one root long, with distinctly crooked neck and surface uniformly warty; color bright yellow; shell very hard when ripe. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 85c.

Mammoth Summer large Crookneck and stronger growing than the Summer Crookneck and producing fruit fully twice as large, a little deeper colored and with rough, warty surface. Its large size and attractive color make it a favorite with market gardeners. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c;

Oz. 10c; 2 Oz. 15c; 4 Dz. 25c, Lb. 90c.
Lb. 90c.
Italian (Cocozella di Napoli) Vine
Vegetable Marrow gated fruits, dark green at first but as they mature becoming marbled with yellow and lighter green in stripes. The young and tender fruits when slied and fried in oil constitute a vegetable delicacy very popular, especially in Naples. Pkt. 5c; Oz. 10c; 2 Oz. 20c; 4 Lb. 30c; Lb. \$1.00

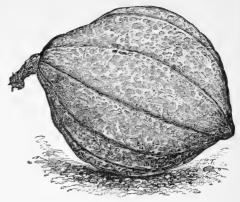

MAMMOTH WHITE BUSH SCALLOP

## SQUASH—AUTUMN AND WINTER

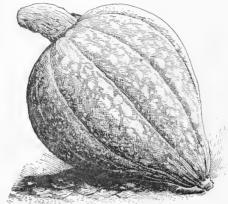

Delicious We are convinced that this squash is particularly excellent in quality and in that respect it is now by many considered even better than the Hubbard. It is a very early winter variety of medium size; color usually about like Hubbard but sometimes lighter in color and mottled, shell moderately hard but very thin. Flesh thick, fine grained and bright yellow in color. Even when immature this squash is in condition for use and of finest flavor. Pkt. 5c; Oz. 10c; 2 Oz. 20c; 3 Lb. 30c; Lb. \$1.00

Hard Shelled Marrow drying. Fruit large, oval, somewhat pointed, of deep orange red color and though quite smooth has as hard a shell as the Hubbard. Flesh very thick, rich orange-red without a tinge of green even close to the shell and unequalled for making pies, having a flavor and quality similar to but much finer than that of the choicest pumpkin. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 80c.

Boston Marrow A fall and winter variety of medium to large size, oval form, skin thin; when ripe bright orange with a netting of light cream color, flesh rich salmon yellow, fine grained and of excellent flavor, but not as dry as the Hubbard. We have very fine stock of this sort. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c.

BOSTON MARROW

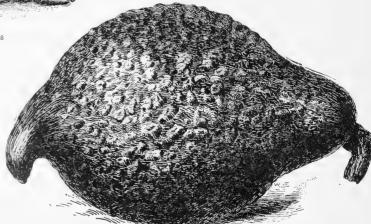

Golden Hubbard productive. Fruits very uniform in size, weighing from six to eight pounds and in shape like the Hubbard, although in condition for use much earlier. They are wonderfully long keepers and can be held over in good condition for spring use. Shell warty, hard, strong and of a beautiful orange-red color, except for a bit of clive green on blossom end, flesh deep orange, dry, fine grained and exceptionally well flavored. Pkt. 5c; Oz. 10c; 2 Oz. 20c; 4 Lb. 30c; Lb. \$1.00

Hubbard One of the best of the winter squashes; flesh bright orange-yellow, fine grained, very dry, sweet and richly flavored; keeps well through the winter, boils or bakes exceedingly dry and is esteemed by many to be as good baked as the sweet potato. Our stock is carefully selected in regard to quality of the flesh and color of the shell and is much superior to that sold as Chicago Warted or Warty Hubbard. Pkt. 5c; Oz. 10c; 2 Oz. 20c; 4 Lb. 30c; Lb. \$1.00

DELICIOUS

## **TOBACCO**

The seed should be sown as early as possible after danger of frost is over. It is customary to burn a quantity of brushand rubbish inthespring on the ground intended for the seed bed; then dig and pulverize the earth and mix with the ashes, after which the seed may be sown and covered very lightly. When the plants are about six inches high, transplant into rows four or five feet apart each way. Cultivate thoroughly with plow and hoe.

HUBBARD SQUASH

STERLING. Very early. Fine for wrappers, cutters and fillers. Pkt. 5c; Oz. 20c; 2 Oz. 35c; ½ Lb. 60c; Lb. \$2.00
SWEET ORONOCO. For first class plug fillers. Makes when sun cured the best natural chewing leaf. Pkt. 5c;

Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00

BRADLEY BROAD LEAF. A popular variety for exports, manufacturing and cigars. Pkt. 5c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00
PERSIAN ROSE. A high grade manufacturing variety. Pkt. 5c; Oz. 30c; 2 Oz. 55c; ¼ Lb. \$1.00; Lb. \$3.00

WHITE BURLEY. A favorite for plug fillers and wrappers. Pkt. 5c; Oz. 35c; 2 Oz. 60c; 4 Lb. \$1.00; Lb. \$3.50

BIG HAVANA, A hybrid Havana or Cuban seed leaf. A heavy cropper, and the earliest cigar variety. Pkt. 5c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50

SUMATRA. Produces cigar wrappers of the highest quality; popular with Florida growers. Pkt. 5c; Oz. 60c; 2 Oz. \$1.00; \( \frac{1}{2} \) Lb. \( \frac{5}{1}.75 \); Lb. \( \frac{5}{6}.00 \)

CONNECTICUT SEED LEAF. A hardy cigar variety, well adapted to growing in the middle and northern states. Pkt. 5c; Oz. 20c; 2 Oz. 35c; 4 Lb. 60c; Lb. \$2.00

HAVANA. Leaf very thin, fine texture. Much used for eigar wrappers. Pkt. 5c; Oz. 40c; 2 Oz. 75c; & Lb. \$1.25; Lb. \$4.00

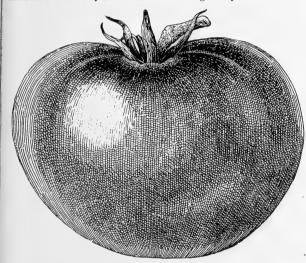

Tomatoes do best on light, warm, not over rich soil and success depends largely upon securing a rapid, vigorous and unchecked growth during the early part of the season. Sow in hot beds from six to eight weeks before they can be set out of doors, which is when danger from frost is past; when the plants have four leaves transplant into shallow boxes or cold frames, setting them four or five inches apart; give plenty of air and endeavor to secure a vigorous but steady and healthy growth, so that at the time of setting in the open ground they will be strong and stocky. Even a slight check while the plants are small will materially diminish their productiveness. Set out of doors as soon as danger from frost is over, but before doing so harden off the plants by gradually exposing them to the night air and by the withdrawal of water until the wood becomes hard and the leaves thick and of a dark green color. Transplant carefully and cultivate well as long as the vines will premit.

water until the wood becomes hard and the leaves their and of a dark green color. Transplant carefully and cultivate well as long as the vines will permit.

To insure best results in respect to early ripening as well as the amount and perfection of fruit, it is advisable to train up and trim the vines, especially if the patch is rather small. When the plants have been properly started and are six to ten inches high they will begin to throw out branches. Select the largest and most vigorous of these and pinch off all others except this one and the main stem. Care must be exercised not to pinch off the fruiting branches will become equally vigorous and as ordinary varieties will grow four to six feet high during the season, they should be securely tied at intervals of about ten inches to a long stake, preferably two inches square, which has been securely set in near the root of the vine. Fruit will set to almost any height desired if all side branches are kept trimmed off at intervals of a week

tervals of a week.

By such a method of training and trimming the fruits are kept clear from the ground and with free access of sunlight they ripen much earlier; the vitality, otherwise exhausted in superfluous branches and leaves, is utilized in forming fruits of largest size, greatest perfection of shape and best quality. All our Tomato seeds are from seed stocks carefully selected and saved by ourselves. We challenge comparison of our stocks with any offered.

EARLIANA

A well known standard deep crim-Perfection
A well known standard deep crimson-scarlet variety of medium to large size; round, smooth, handsome and fruits which are of the highest quality. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.50

Matchless A very popular tomato in the east. Fruit large, very smooth and symmetrical, ripening well to stem. Flesh rich, bright red color and of fine quality, although possibly not quite as firm as Improved Trophy or Stone. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 21b. 75c; 1b. \$2.50. ¼ Lb. 75c; Lb. \$2.50

Improved Trophy and selection, there has been produced a strain which compares favorably with any in smoothness and regularity of the fruit. Its large, strong growing, vigorous and exceptionally productive vine, large, very solid, smooth, finely flavored and beautiful, deep, rich red fruit will satisfy the most exacting growers of tomatoes. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.50

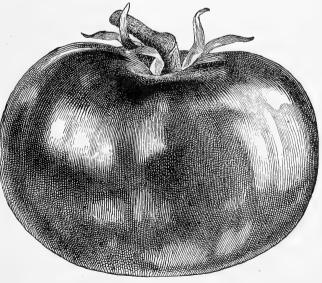

Stone One of the heaviest and most solid fruited of the large tomatoes of good quality. Our stock is distinctly superior to most of that offered under this name, being larger, smoother, more uniform and better colored. Vines vigorous and productive. Fruit round, deep scarlet, slightly flattened, very large and astonishingly heavy. The quality is unexcelled. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.50

Sometime ago we were able to earlier and much superior to that usually sold as Spark's Earliana and we now offer carefully selected seed of this most valuable first early sort. Vine similar in growth, maturing bulk of crop as early as Atlantic Prize, but the deep scarlet fruit is larger, distinctly smoother, solid and of very good quality. Early, smooth and of a large size it is a particularly profitable tomato for market gardeners. Pkt. 5c; Oz. 30c; 2 Oz. 55c; ½ Lb. \$1.00; Lb. \$2.75 Chalk's Early Jewel We consider Sometime ago we were able to Earliana

Chalk's Early Jewel We consider very best early tomatoes yet introduced. Vine vigorous and very productive. Fruit deep scarlet-red, smooth, of large size and excellent quality. (See colored plate, page 9) Pkt. 5c; Oz. 30c; 2 Oz. 55c; & Lb. \$1.00; Lb. \$2.75

Early Michigan One of the best sec-ond early sorts. Its first fruits are very early and the vines continue for a long time to bear medium sized to large crimson-scarlet fruit, per-fectly smooth, solid, but without a hard core. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 1/4 Lb. 75c; Lb. \$2.50

D.M. Ferry & Co's Avariety introduced by us and one of the best table tomatoes in quality. Vine medium sized and vigorous. Fruit medium sized, oval, very smooth and of bright crimson-scarlet color. Pkt. 5c; Oz. 25c; 2 Oz. 40c; ½ Lb. 75c; Lb. \$2.50

STONE

June Pink

une Pink An extra early, purplish pink tomato similar to the popular scarlet fruited Earliana in growth of vine, shape and size of fruit and time of maturing. This is of exceptional value to market gardeners who want an early, purplish pink tomato, either for home market or to ship; also desirable for planting under glass. Pkt. 5c; Oz. 30c; 2 Oz. 55c; 4 Lb. \$1.00; Lb. \$3.25

Pkt. 5c; Oz. 30c; 2 Oz. 55c; ¼Lb. \$1.00; Lb. \$3.25

Early Detroit The largest and best in shape of the early purplish pink tomatoes. Vine vigorous and very productive. Fruit exceptionally uniform in size, nearly globe shaped, heavy, firm, smooth and well adapted for shipping. (See colored plate, page 9) Pkt. 5c; Oz. 50c; 2 Oz. 85c; ¼Lb. \$1.50; Lb. \$5.00

Acme its first fruit very early and continuing to bear abundantly until cut off by the frost. Fruit purplish pink in clusters of four or five, invariably round, smooth and of good size, free from cracks and stands shipment well. Flesh solid and of excellent flavor. Pkt. 5c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50 Lb. \$2.50

Essex Early Hybrid Similar to the Acme, fruit Essex Early Hybrid purplish pink, always smooth and handsome; in quality is classed with the best. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.50 Livingston's Globe pink tomato of excellent quality. Fruits rather uneven in size but very smooth and mature earlier than most main crops sorts. The

and mature earlier than most main crop sorts. The average tomato is very deep, almost globe shaped. Pkt. 5c; Oz. 35c; 2 Oz. 60c; 4 Lb. \$1.00; Lb. \$3.50

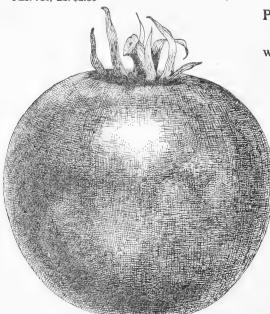

Magnus A variety with potato leaved foliage, producing purplish pink fruit of the largest size; much smoother than most of the large fruited sorts and matures earlier. Pkt. 5c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50

A larger, smoother fruit than the original stock

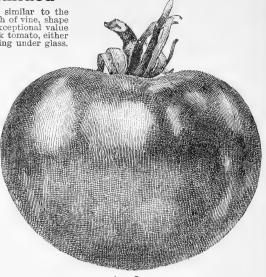

Beauty A larger, smoother fruit than the original stock and one of the smoothest and best of the large purple sorts. Vine large, vigorous and heavy bearers; fruit large, uniform in size, very smooth; color of skin purplish pink; flesh light pink and of excellent flavor. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.50

Ponderosa A purplish pink tomato of largest size. A purplish pink tomato of largest size. Vine vigorous and very productive. Fruit very solid, fairly smooth and considered of very good quality, especially by those who prefer a tomato quite free from acid. This variety is more suitable for home use than for the market. Pkt. 5c; Oz. 45c; 2 Oz. 85c; 4 Lb. \$1.50; Lb. \$4.50 4 Lb. \$1.50; Lb. \$4.50

Buckeye State
One of the best late purplish pink varieties. Vine exceptionally strong growing and vigorous and growers in some sections of the south claim that it is blight proof. It should be given more room than most. Fruit very large, round, smooth and firm. An excellent shipper. Pkt. 5c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50

LIVINGSTON'S GLOBE

JUNE PINK

Dwarf Stone
Sorts the bright red fruit is of good color, exceedingly smooth, and very solid. We consider this the best of the large fruited dwarf tomatoes. Pkt. 5c; Oz. 30c; 2 Oz. 55c; ¼ Lb. \$1.00; Lb. \$3.00

Dwarf Champion

A purplish pink variety forming a strong, erect, bushy plant two feet high. Often sold as tree tomato. Fruit smooth, medium sized, fairly solid and of good flavor. Desirable for forcing as it can be planted close to the glass and more closely on the bench than the tall growing kinds. Our stock is a very superior strain with larger, smoother fruit than the original. Pkt. 5c; Oz. 30c; 2 Oz. 55c; 4 Lb. \$1.00; Lb. \$2.75 A purplish pink variety forming

Golden Queen Fruit large and smooth; color a beautiful golden yellow, sometimes with a slight blush of red, as smooth and well shaped as the best of the red varieties and of superior flavor. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.50

Peach Desirable for preserving, eating from the hand or for table decoration. Fruit resembles a peach in shape and size and the color a light terra cotta red with a delicate bloom; flesh tender and of good flavor. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.50

WHITE APPLE. About one and one-half inches in diameter, round, perfectly smooth, yellowish white color. Flesh very mildly flavored and delicate. Pkt. 5c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50

RED PEAR. Used for preserves and to make "tomato figs." Fruit bright red, distinctly pear shaped and of excellent flavor. Our stock is the true pear shaped and not the larger red plum tomato often sold under this name.

21 b. 75c. 1b. \$2.00. ½ Lb. 75c; Lb. \$2.50

YELLOW PEAR. Similar to the Red Pear, but of rich, clear, yellow color and quite distinct from the variety sometimes sold under this name. Pkt. 5c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50

YELLOW PLUM. Fruit plum shaped, of clear, deep yellow color; flesh yellow and finely flavored. Much esteemed for preserves. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.50

RED CHERRY. Fruit small, about five-eighths of an inch in diameter, perfectly round and smooth. Fine for pickles and preserves. Pkt. 5c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50

YELLOW CHERRY. This variety differs from Red Cherry in color only. Pkt. 5c; Oz. 25c; 2 Oz. 40c; 4 Lb. 75c; Lb. \$2.50

YELLOW HUSK, OR GROUND CHERRY. Used for preserves and eating from the hand. The seed we offer is that of the true Yellow Ground Cherry, not the purple fruited sort which is scarcely edible. Pkt. 5c; Oz. 25c; 2 Oz. 40c; ½ Lb. 75c; Lb. \$2.50

# JRNIF

The value of Turnips and Ruta Bagas for feeding stock in fall and winter is not fully appreciated, as they are much liked by all kinds of stock and serve to keep them in good condition. We earnestly recommend that farmers increase their sowings largely, for we are sure the crop will prove remunerative.

This wholesome vegetable is very easily affected in its form and flavor by soil, climate, and mode of culture. There are a great many varieties, but our list comprises the best for the garden and farm.

Sow in drills about two feet apart and half an inch deep, or sow broadcast, but in either case be sure to have the ground rich and freshly stirred. Thir early and keep free from weeds so that the young plants will not be checked in growth. Any overcrowding will result in rough and poorly flavored roots. It is important to get the spring and summer crop started very early so that the turnips may have time to grow to sufficient size before hot weather causes them to become tough and bitter. them to become tough and bitter.

Extra Early White Milan Variety remarkably early; top pact, so that rows can be planted close together. Roots clear white, very smooth, flat and symmetrical; flesh white, sweet and tender. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 85c.

Extra Early Purple Top Milan except roots are a little flatter and purple-red on upper portion. All in all, the Milan turning leave nothing more to be desired in the way of an extra early garden turnip. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 80c.

White Egg variety with small top and rough leaves. The root grows half out of the ground. Flesh very sweet, firm and mild. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 65c.

Early White Flat Dutch, Strap Leaved an excellent ety and largely used in the southern states. Root medium sized; from four to five inches in diameter and about two inches thick; color white, very early, sweet and tender. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 65c.

Early Purple Top, Strap Leaved a great favorite for table use. Leaves few, entire, upright in growth. Root of medium size. Color purple or dark red above ground, white below; flesh white, fine grained and tender. Also called Early Red Top, Strap Leaved. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 16b. 20c; Lb. 65c.

Purple Top White Globe

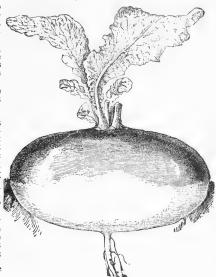

A large globular variety, very even in shape and of handsome for table or stock. The variety is a good keeper and a fine market sort. Also called Red Top White Globe. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ¼ Lb. 25c; Lb. 75c.

Cow Horn, or Long White shade of green at the top; long, slightly crooked and growing nearly half out of the ground. Delicate and well flavored, of very rapid growth and has obtained considerable favor as a market sort for fall and early winter use. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 25c; Lb. 75c.

Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

Large White Norfolk although a little coarse in texture it is of very good quality for the table. Roots large, spherical or slightly flattened and very white. It is allowed to stand out during the winter in the south where the tops are used for greens. Pkt. 5c; Oz. 10c; 2 Oz. 15c. ½ Lb. 20c; Lb. 70c.

Pomeranean White Globe Kinds and in good, rich soil roots will frequently grow to twelve pounds in weight. It is globe shaped, skin white and smooth. Used for stock feeding; also excellent for table use. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 70c.

EARLY PURPLE TOP, STRAP LEAVED

Sweet German one of the best for table use or for feeding stock. It should be sown a month earlier than the dat turnips. Roots somewhat globe shaped; flesh white, hard, firm and sweet, keeping nearly as well as the Ruta Baga. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 70c.

Seven Top used for greens. It is very hardy and will grow all winter, but does not produce a good root and is only recommended for the tops. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 65c.

southern Prize size, more symmetrical in shape and better in quality; also used for feeding. A favorite forage plant in the Virginias and Carolinas where it grows during winter without protection. Pkt. 5c; Oz. 10c; 2 Oz. 15c; \$1 Lb. 20c; Lb. 65c. Southern Prize

### YELLOW FLESHED VARIETIES

Large Amber Globe

The period of the best yellow fleshed varieties of the policy for stock. Flesh yellow, fine grained and sweet; color of skin yellow; top green. Grows to a large size, is hardy, keeps well and a good cropper. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 60c.

Yellow Stone
Roots of medium size, uniformly globular and perfect in shape; skin smooth and of beautiful pale yellow color.
Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 60c.

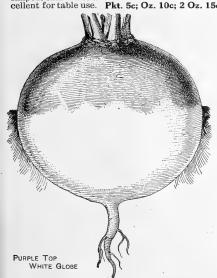

Yellow Globe

A round, smooth, medium sized, light yellow turnip, with crisp, firm flesh of fine quality: a very attractive and beautiful sort. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ¼ Lb. 20c; Lb. 60c.

Orange Jelly, or Greshed turnips yet introduced. Not of large Robertson's Golden Ball size but firm, hard and of most excellent flavor. Keeps well and is a fine table variety. Skin deeper yellow than most of this class. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 60c.

Purple Top Yellow Aberdeen Roots medium sized, round; flesh pale yellow, tender and sugary; the variety is hardy and productive and the roots.

tender and sugary; the variety is hardy and productive and the roots keep well. Approaches the Ruta Baga in hardiness and firmness of texture; of special value for feeding cattle. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 60c.

# BAGAS, OR SWEDES

Sow from the middle of June to the middle of July, in ground previously enriched with well rotted manure, in drills about two and one-half feet apart and thin the young plants eight to twelve inches apart in the row. When the roots are full grown and before hard freezing weather, pull them, cut off the tops and store in a root cellar or pit. Ruta Bagas are sometimes sown broadcast and left to take chances with the weeds but the crop is seldom a success, though occasionally considered the produced form weather are obtained. on new clearings free from weed seed, fair results are obtained.

MONARCH

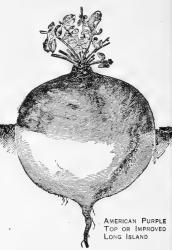

TANKARD

American Purple Top or Astrain of Purple Improved Long Island baga of American origin, selected to a smaller top and much shorter neck than is usually found, while the roots grow to a large size and are of the finest quality and excellent for table use and stock feeding. We consider this one of the most desirable sorts. Pkt. 5c; Oz. 10c; 2 Oz. 15c; & Ib. 20c; Lb. 60c. Lb. 20c; Lb. 60c.

Bangholm. A very superior variety both in form and quality. Of large size, small neck, few or no side roots and yields well. Flesh 'yellow, sweet and solid; skin yellow with purple top. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 50c.

Carter's Imperial Purple Top. A most excellent sort for table use or feeding stock. Flesh yellow, solid and firm, sweet and rich. Hardy and yields heavily. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 50c.

D. M. Ferry & Co's Improved A hardy and productive Purple Top Yellow variety having but little meck. Flesh yellow, of solid texture, sweet and well flavored; shape slightly oblong, terminating abruptly; color deep purple above ground and bright yellow beneath; leaves small, light green. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 50c.

Orummond's. An improved strain of Purple Top Swede, excellent in uniformity of shape, color and quality. This variety is considered by many an excellent table sort. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 50c. Drummond's.

Hall's Westbury. A popular variety which it is claimed will endure dry weather better than most sorts. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 50c.

Hartley's Bronze Top. A very large, oval swede with very short neck. A favorite sort in Canada. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 60c.

Laing's Purple Top. A large, early sort of fine quality. Roots globe shaped; skin purplish red above ground and yellow beneath; flesh yellow; necks small; tops peculiar in that their leaves are strap or entire. An excellent variety in every way. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 60c.

Shepherd's Golden Globe. A choice English strain in which the tops of the large, lish strain in which the tops of the large, round roots are bronze green; the flesh is deep orange color; very uniform and true.

Oz. 10c; 2 Oz. 15c; ¼ Lb. 20c; Lb. 50c. Skirving's King of Swedes. Though this sort reaches a large size the yellow flesh is of most excellent quality. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 50c.

Sutton's Champion. Roots large, spherical, purple on top, flesh yellow, tender and sweet. It is an excel-lent keeper and enormous yielder. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 20c; Lb. 50c.

Universal, or Canadian Gem. Roots nearly round, purple above ground, yellow beneath; very small in top and neck; fiesh yellow and of excellent quality. Variety is drought and mildew resisting to a remarkable degree. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 65c.

White Swede, or Sweet Russian Turnip. An excellent keeper and very desirable either for the table or for stock. Grows very large; flesh white, solid, of firm texture, sweet and rich. Pkt. 5c; Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 50c.

Yellow Swede. Shape oblong, dull reddish color above ground but yellow underneath; is hardier than the common turnip and will keep solid until spring. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ¼ Lb. 20c; Lb. 50c.

D. M. FERRY & CO'S MPROVED PURPLE TOP YELLOW

PERFECTION WHITE

## AROMATIC, MEDICINAL AND POT HERBS

Most of the varieties thrive best on sandy soil and some are stronger and better flavored when grown on that which is rather poor. In all cases the soil should be carefully prepared and well cultivated, as the young plants are for the most part delicate and easily choked out by weeds. Sow as early as the ground can be made ready, in drills sixteen to eighteen inches apart, taking pains that the soil is fine and pressed firmly over the seed, or they may be planted as a second crop—the seeds sown in beds in April and the plants set out in June. Most of them should be cut when in bloom, wilted in the sun and thoroughly dried in the shade.

ANISE (Pimpinella anisum) An annual herb cultivated principally for its seeds which have a fragrant, agreeable smell and pleasant taste; used medicinally for various purposes. The leaves are sometimes used for garnishing and flavoring.

Pkt. 5c;
Oz. 10c; 2 Oz. 20c; ½ Lb. 30c; Lb. \$1.00

BALM (Melissa officinalis) A perennial herb, easily propagated by division of the root or from seed. The leaves have a fragrant odor similar to lemons and are used for making balm tea for use in fevers and a pleasant beverage called balm wine.

Pkt. 5c; Oz. 25c; 2 Oz. 40c; ½ Lb. 75c; Lb. \$2.50

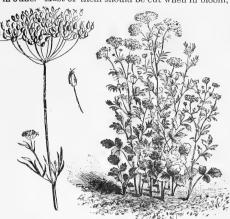

Pkt. 5c; Oz. 25c; 2 Oz. 40c; \$\frac{1}{2}\text{Lb.} 75c; Lb. \$2.50

BASIL, SWEET (Ocimum basilicum) A hardy annual from the East Indies. The seeds and stems have a flavor somewhat similar to that of cloves and are used for flavoring soups and sauces. Pkt. 5c; Oz. 15c; 2 Oz. 25c; \$\frac{1}{2}\text{Lb.} 40c; Lb. \$1.25

BORAGE (Borago officinalis) A hardy annual used as a pot herb and for bee pasturage. The bruised leaves immersed in water give it an agreeable flavor. Pkt. 5c; Oz. 10c; 2 Oz. 20c; \$\frac{1}{2}\text{Lb.} 30c; Lb. \$1.00

CARAWAY (Carum carui) Cultivated for its seed which is used in confectionery, cakes, etc. The leaves are sometimes used in soups; If sown early in August the plants will give a fair crop of seed the next season, but usually when sown in the spring will not seed until the next year. Pkt. 5c; Oz. 10c; 2 Oz. 15c; \$\frac{1}{2}\text{Lb.} 25c; Lb. 75c. ¼ Lb. 25c; Lb. 75c.

CARAWAY, for Flavoring. Oz. 10c; 2 Oz. 15c; 4 Lb. 20c; Lb. 50c.

ANISE

CATNIP, or CAT-MINT (Nepeta cataria) A hardy perennial, well known as a valuable mild nervine for infants. Sow preferably in fall, or in early spring, in drills twenty inches apart. Pkt. 5c; Oz. 40c; 2 Oz. 75c; ½ Lb. \$1.25; Lb. \$4.00

CORIANDER (Coriandrum sativum) A hardy annual cultivated for its seed which has an agreeable taste and is used in confectionery and to disguise the taste of medicine. Gather on a dry day, bruising the stems and leaves as little as possible, for when injured they have a disagreeable odor which they impart to the seed. Pkt. 5c; Oz. 10c; 2 Oz. 15c; ½ Lb. 25c; Lb. 75c.

CORIANDER, for Flavoring. Oz. 10c; 2 Oz. 15c; ¼ Lb. 20c;

**DILL** (Anethum graveolens) An annual cultivated for its seed which has an aromatic odor and a warm, pungent taste. It is good for flatulence and colic in infants. It is sometimes added to pickled cucumbers to heighten the flavor. **Pkt. 5c; Oz. 10c;** 2 Oz. 15c; 1/4 Lb. 20c; Lb. 60c.

FENNEL, FLORENCE (Fæniculum dulce) An excellent bulblike vegetable which is formed above the ground at the base of the leaf stalk. Blanched and boiled it somewhat resembles in flavor celery, but is more delicate. Sow in spring and for succession. Pkt. 5c; Oz. 15c; 2 Oz. 25c; 4 Lb. 40c; Lb. \$1.50

FENNEL, SWEET (Fæniculum officinale) A hardy perennial. The leaves are largely used in soups, fish sauces, garnishes and salads. The seed is sometimes used in confectionery. Pkt. 5c; Oz. 10c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00

BORAGE

HOREHOUND (Marrubium vulgare) A perennial herb with a strong, aromatic smell and a bitter, pungent taste. It is a tonic and enters largely into the composition of cough syrups and lozenges. Will thrive in any soil but is stronger if grown on light, poor land. Pkt. 5c; Oz. 20c; 2 Oz. 35c; \*Lb. 60c; Lb. \$2.00

HYSSOP (Hyssopus officinalis) A hardy perennial with an aromatic odor and a warm, pungent taste. It is a stimulant and expectorant and is used in asthma and chronic catarrh. The flowering summits and leaves are the parts used. Pkt. 5c; Oz. 25c; 2 Oz. 40c; \*Lb. 75c; Lb. \$2.50

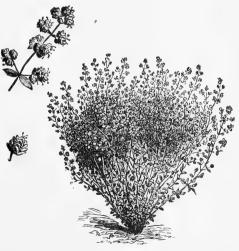

LAVENDER (Lavendula spica) A hardy perennial, growing about two feet high. It is used for the distillation of lavender water or dried and used to perfume linen. It should be picked before it becomes dry and hard and dried quickly. The seed is of rather slow and uncertain germination. Pkt. 5c; Oz. 20c; 2 Oz. 35c; \*Lb. 60c; Lb. \$1.75

MANJORAM, SWEET (Origanum marjorana) A perennial plant but not hardy enough to endure the winter of the north. The young tender tops are used green for flavoring, or they may be cut and dried for winter use. Pkt. 5c; Oz. 15c; 2 Oz. 25c; \*Lb. 40c; Lb. \$1.50

be cut and dried for winter use. Pkt. 5c; Oz. 15c; 2 Oz. 25c; & Lb. 40c; Lb. \$1.50

ROSEMARY (Rosmarinus officinalis) A hardy perennial with fragrant, spicy odor and a warm, bitter taste. May be easily raised from seed but does not reach a size fit for use until the second season The dried leaves deteriorate rapidly with age. Pkt. 5c; Oz. 35c; 2 Oz. 60c; & Lb. \$1.00; Lb. \$3.50

RUE (Ruta graveolens) A hardy perennial with a peculiar smell. The leaves are bitter and so acrid as to blister the skin. It is a stimulant and anti-spasmodic but must be used with great caution, as its use sometimes results in serious injury. It must not be suffered to run to seed and does best on poor soil. Pkt. 5c; Oz. 25c; 2 Oz. 40c; & Lb. 75c; Lb. \$2.25

MARJORAM, SWEET

SAFFRON (Carthamus tinctorius) A hardy annual from Egypt, that has become naturalized in many parts of the country. Cultivated for its flowers which are used in dying and to make the cosmetic powder called rouge. Pkt. 5c; Oz. 15c; 2 Oz. 25c;

the cosmetic powder called rouge. Pkt. 5c; Oz. 15c; 2Oz. 25c; ½Lb. 40c; Lb. \$1.25

SAGE (Salvia officinalis) A hardy perennial possessing some medicinal properties but cultivated principally for use as a condiment, it being used more extensively than any other herb for flavoring and dressing. Cut the leaves and tender shoots just as the plant is coming into flower and dry quickly in the shade. The plants will survive the winter and may be divided. If this is done they will give a second crop superior in quality. Pkt. 5c; Oz. 15c; 2 Oz. 25c; ½Lb. 40c; Lb. \$1.50

SAVORY, SUMMER (Satureia hortensis) A hardy annual, the dried stems, leaves and flowers of which are extensively used for flavoring, particularly in dressings and soups. Pkt. 5c; Oz. 15c; 2 Oz. 25c; ½Lb. 40c; Lb. \$1.25

THYME (Thymus vulgaris) This herb is perennial and is both a medicinal and a culinary plant. The young leaves and tops are used for soups, dressing and sauce; a tea is made from the leaves which in some cases will relieve nervous headache. Sow as early as the ground will permit. Pkt. 5c; Oz. 50c; 2 Oz. 85c; ½Lb. \$1.50; Lb. \$5.00

WORMWOOD (Artemisia absinthium) A perennial plant of fragrant and spicy odor, but with intensely bitter taste. The leaves are used as a tonic, vermifuge and as a dressing for fresh bruises. It may be raised from seed, propagating by cuttings or dividing the roots. A dry, poor soil is best adapted to bring out the peculiar virtues of this plant.

Pkt. 5c; Oz. 20c; 2 Oz. 25c; ½ Lb. 60c; Lb. \$2.00 Lb. 40c; Lb. \$1.25 AGE (Salvia officinalis)

Prices of Clover subject to change

Prices of Clover subj.

Alfalfa, or Lucerne to sow this clover on land having a stiff clay or hard pan subsoil, as the roots naturally penetrate to a great depth and must do so if the plants live any time. Sow on rich moist loam or sandy soil having a deep, porous subsoil. Prepare the land thoroughly and sow seed at the rate of fifteen to twenty-five pounds per acre with a broadcaster or grass seeder. Cover with a brush or light harrow. The young plants are quite tender and the land must be free of weeds until they become established.

4Lb. 15c; Lb. 40c; for larger lots inquire for prices.

Alsike, or Swedish (Trifolium hybridum) The most hardy of all clovers: perennial. On rich, moist soil it yields an enormous quantity of hay or pasturage, but its greatest value is for sowing with other clovers and grasses, as it forms a thick bottom and greatly increases the yield of hay; cattle prefer it to any other forage. The heads are globular, fragrant and much liked by bees which obtain a large amount of honey from them. Sow in spring or fall, at the rate of six pounds per acre, when used alone. 4Lb. 15c; Lb. 35c; for larger lots inquire for prices.

Lb. 15c; Lb. 35c; for larger lots inquire for prices.

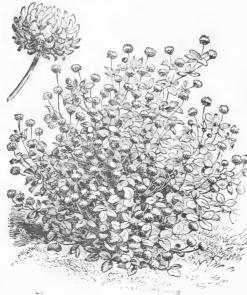

WHITE DUTCH CLOVER Crimson Trefoil, or Scarlet Italian in carnarumson refoil, or scarlet Italian incarnatum) An annual variety in common use in the south for feeding green and for hay, and also found very profitable on the sandy soils of New Jersey. The yield in fodder is immense and after cutting, it at once commences growing again, continuing until severe, cold, freezing weather. It grows about one foot high: the roots are nearly black; leaves long; blossoms long, pointed and of very deep red or carmine color. Makes good hay. It is sown in August or September in the south, but should not be planted in the north until spring. Sow ten to fifteen pounds per acre. Lb. 10c; Lb. 25c; for larger lots inquire for prices. Mammoth, or Large Red Grows nearly

size of the Common Red Clover, often making a stand when the other clovers fail. Sow about eight to twelve pounds per acre. 4Lb. 15c; Lb. 35c; for larger lots inquire for prices.

acre. \$\frac{4}\text{Lb. 15c; Lb. 35c;}\$ for larger lots inquire for prices. \$\frac{Medium Red, or June}{(Trifolium pratense)}\$ This of all the varieties for practical purposes. Sow in spring or fall and if no other grasses are used, at the rate of eight to twelve pounds per acre; more is required on old, stiff soils than on new and lighter ones. \$\frac{4}{Lb. 15c; Lb. 35c;}\$ for larger lots inquire for prices.

\text{White Dutch}{(Trifolium repens)}\$ A small, creeping and for lawns. It accommodates itself to a variety of soils, but prefers moist ground. Sow in spring at the rate of six pounds per acre, or when used with other grasses, half that amount. \$\frac{4}{Lb. 15c; Lb. 45c;}\$ for larger lots inquire for prices.

ALSIKE, OR SWEDISH CLOVER

### GRASS SEEDS

(Bromus inermis) Awnless Brome Grass perennial, valuable for binding the soil of embankments and for resisting both drought and cold. On light, dry soils it is used for hay and pasturage, but is not recommended where better grasses will succeed. Sow forty pounds per acre. Lb. 25c. postpaid; for larger lots inquire for prices.

Creeping Bent Grass
for lawns that are to be used as croquet and tennis grounds, because it is benefited more than hurt by tramping and by its bright color adds to the beauty of the lawn.

Lb. 50c. postpaid; for larger lots inquire for prices.

Lb. 50c. postpaid; for larger lots inquire for prices.

Hard Fescue (Festuca duriuscula) Similar to Sheep's Fescue, but not so dense and taller; this often will cover sandy soil under the shade of large trees where no other grass will grow; is a desirable addition to lawn grass. Sow thirty pounds per acre. Lb. 35c. postpaid; for larger lots inquire for prices.

Kentucky Blue Grass (Poa pratensis) Fancy ed June Grass, but the true June or Wire Grass is much inferior. Kentucky Blue Grass is the most nutritious, hardy and valuable of all northern grasses. Sown with White Clover it forms a splendid lawn; for this purpose use not less than fifty-four pounds of Blue Grass and six pounds of White Clover per acre. If sown by itself for meadow or pasturage use about twenty-eight pounds per acre. Lb. 35c. postpaid; for larger lots inquire for prices.

Meadow Fescue, or English Blue Grass (Festuca pratensis) A perennial, from two to four feet high, with flat, broad leaves. One of the standard European grasses. It needs rich ground and succeeds well on prairie soil. An excellent pasture grass to take the place of the wild grasses, as it yields a large amount of early and late feed. Sow about twenty-five pounds per acre. Lb. 35c. postpaid; for larger lots inquire for prices.

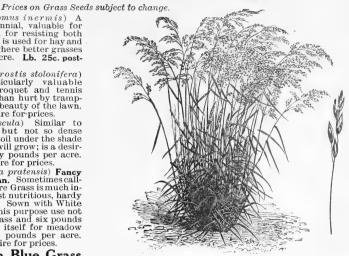

Ch. 35c. postpaid; for larger lots inquire for prices.

Orchard Grass (Dactylis glomerata) Desirable on valuable aftermath. It is ready for grazing in spring two weeks sooner than most grasses and when fed off is again ready for grazing in a week and will continue green when other grasses are withered by dry weather. It is palatable and nutritious and stock eat it greedily when green. A tendency to grow in tufts unfits it for lawns. It does better if sown with clover and as it ripens at the same time, the mixed hay is of the best quality. If sown alone, about twenty-eight pounds are required per acre; if sown with clover, half that quantity. Perennial and will last for years. Lb. 40c. postpaid; for larger lots inquire for prices.

Perennial Rye Grass valuable variety for permanent pasture. Succeeds well on almost any soil, but is particularly adapted to moderately moist or irrigated lands. Sow thirty to forty pounds per acre in spring. Lb. 25c. postpaid; for larger lots inquire for prices.

KENTUCKY BLUE GRASS

WOOD MEADOW GRASS

(Festuca rubra) Red, or Creeping Fescue (Festuca rubra) A grass, resisting extreme drought, and especially adapted for forming a close and lasting turf in shady places. Valuable also for exposed hillsides, and golf courses. Sow thirty pounds per acre. Lb. 50c. postpaid; for larger lots inquire for prices.

**Red Top** (Agrostis vulgaris) In Pennsylvania and states farther south this is known as Herd's Grass, a name applied in New England and New Grass, a name applied in New England and New York to Timothy. It is a good, permanent grass, standing our climate well, and makes good pasture when fed close. Is valuable for low, wet meadows, producing a large return in good hay. When sown alone, use about twenty-eight pounds of the chaff seed per acre. Sow in spring or fall.

Red Top Unhulled Fancy (cleaned from chaff) Sow eight to ten pounds per acre. Lb. 35c. postpaid; for larger lots inquire for prices.

(free from light chaff) Lb. 25c. postpaid; for larger lots inquire for prices.

inquire for prices.

Rhode Island Bent Grass valuable perennial for lawns and pasturage. Much like Red Top, though smaller. Thrives on light, dry soils as well as on rich, moist ones. For lawn purposes, if used alone, it should be sown at the rate of about forty pounds per acre; for pasture, if used alone, twenty-four pounds per acre. Lb. 45c. postpaid; for larger lots inquire for prices.

Sheep's Fescue (Festuca ovina) A small tufted, hardy grass forming a cluster of narrow, cylindrical leaves. It is of value in mixture for lawns on dry soils and in shady locations. Sow about thirty-five pounds per acre. Lb. 35c. postpaid; for larger lets inquire for prices. lots inquire for prices.

(Festuca elatior) A valuable perennial Tall Fescue (Festuca etator) A valuable perennial grass, very productive and nutritious. Succeeds best on moist, heavy soil, but will do well on any good soil, wet or dry. If used alone sow forty pounds per acre. Lb. 50c. postpaid; for larger lots inquire for prices.

(Avena elatior) Tall Meadow Oat Grass hardy perennial much used in the south and west. Roots penetrate deep. It yields a heavy crop on any good soil, and is valuable both for meadow and pasture. Sow thirty to forty pounds per acre. Lb. 35c. postpaid; for larger lots inquire for prices.

(Phleum prathense) The most valuable of Thrives best on moist, loamy soils of medium tenacity. It should be cut just when the blossom falls. Sow early in the spring or fall, at the rate of twelve pounds per acre, if alone, but less if mixed with other grasses. Lb. 20c. postpaid; for larger lots inquire for prices. Timothy

Wood Meadow Grass (Poa nemoralis) Grows from one and one-half to two feet high; has a perennial creeping root and an erect, slender, smooth stem. Well adapted to shaded situations, such as orchards and parks, for either hay or pasturage. Sow about thirty pounds per acre. Lb. 75c. postpaid.

Prices on Grass Seeds subject to change. The pound prices include postage; 100 pound prices are by freight or express, at purchaser's expense.

The essentials for a fine lawn are: First, a rich, well drained soil; second, careful preparation of the ground, making it as fine and smooth and mellow as possible; third, a wise selection of seeds; fourth, sowing at such a time as to give the young plants a chance to become well established before being subjected to very dry or cold weather or to the direct rays of the hot summer sun. However much care is bestowed on the soil and seed, no lawn will be beautiful without frequent mowing and rolling. Too much care cannot be bestowed upon the selection of grasses, as some varieties are the most luxuriant in spring, others in summer, others again in autumn and a combination of the proper sorts is required for a perfect, carpet-like lawn. It may be planted early in spring or fall and should be sown at the rate of sixty to one hundred pounds per acre; much more is required than for hay or pasturage. If sown in the spring, sow as early as possible, making the surface very fine and smooth, then raking it over and sowing the seed just before a rain which, if the surface has just been raked, will cover the seed sufficiently. If the expected rain does not come, cover by rolling with a light roller. For fall seeding sow before the autumn rains and early enough to enable the young grass to become well established before very cold weather, when a light dressing of manuer should be given. very cold weather, when a light dressing of manure should be given.

Extra Fine Mixed (Central Park Mixture) We have given much thought and made many experiments to secure the best selection and think our Central Park Mixture is the best possible for permanent lawns. One pound of this mixture is sufficient to sow 600 square feet. Lb. 45c; 100 Lbs. \$30.00

Fine Mixed Lawn Grass A thoroughly first-of the best and cleanest grades of those varieties used and best adapted to general lawn purposes. Lb. 35c; 100 Lbs. \$20 00 100 Lbs. \$20.00

Shady Lawn Mixture A selection of fine grasses which thrive under the shade of trees or buildings where there is little sun.

Mixtures For Golf Links While there are on the ready prepared golf mixtures of more or less value, we have found that the best results are obtained by giving individual attention to each customer and making a special mixture to suit his needs. We have thus overcome the difficulties presented by the great dissimilarity of local conditions of various links and are willing to give you the benefit not only of our experience on some of the best greens in this country but of expert knowledge of grass seeds as well. Write us a description of your links, telling what the nature of the soil is, how drained, how much it has the sun, whether the winters are long or open and whether the summers are wet or dry and we will offer you two or more mixtures especially adapted to the various parts of your grounds. the various parts of your grounds.

### **MISCELLANEOUS FARM** SEEDS

HUNGARIAN

Barley, Common adapted to wheat. It is sown in the spring and can be grown farther north than any other grain. Unless intended for seed it should be cut before fully ripe as it is then heavier, of better quality and less liable to shell. Use about two and one half bushels per aere.

3 Lbs. postpaid 50c; for larger lots inquire for prices.

Buckwheat, Common Buckwheat should be sown about June 20, broadcast, at the rate of about one-half bushel per acre; the average yield being from twenty-five to thirty bushels. It should be threshed as soon as dry, for if allowed to stand in mass it is apt to spoil. 3 Lbs. postpaid 50c; for larger lots inquire for prices.

Buckwheat, Japanese early and resisting drought and bigin rous, maturing seed grain is much larger and has a thinner hull than the Common or the Silver Hull. We recommend this especially for well drained or sandy land and the dry climate of the western plains. 3 Lbs. postpaid 50c; for larger lots inquire for prices.

Buckwheat, Silver Hull This improved variety is old sort. It is in bloom longer, matures sooner, and yields double the quantity per acre. The husk is thinner, the corners less prominent and the grain of a beautiful light gray color. The flour is said to be better and more nutritious.

3 Lbs. postpaid 50c; for larger lots inquire for prices.

Flax (Linum usultatissimum) Sow late enough in the spring to avoid frost and early enough to secure a good stand and enable the crop to ripen before the fall rains. A fair average quantity of seed to be sown on an acre is one-half bushel, when cultivated for seed; if for the fibre a larger quantity should be sown. Cut before quite ripe and if the weather be dry let it lie in the swath a few hours, when it should be raked and secured from the weather; thresh early in the fall and in dry weather. 3 Lbs. postpaid 50c; for larger in the fall and in dry weather. 3 Lbs. postpaid 50c; for larger lots inquire for prices.

Hungarian

(Panicum germanicum) This is a species of annual millet growing less rank, with smaller stalks, often yielding two or three tons of hay per acre. It is very valuable and popular with those who are clearing timber lands. Sow and cultivate like millet.

3 Lbs. postpaid 50c; for larger lots inquire for prices.

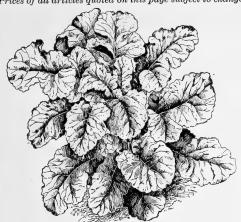

(Panicum miliaceum) Requires a dry Millet, Common light, rich soil, and grows two and one-half to four feet high with a fine bulk of stalks and leaves. one-nair to four feet high with a fine bulk of stalks and leaves. It is early maturing and is excellent for forage. For hay, sow broadcast, about twenty-five pounds per acre, from May 1st to August 1st. For grain, sow in drills, about twelve pounds per acre and not later than June 20th. 3 Lbs. postpaid 50c; for larger lots inquire for prices.

Millet, German or Golden leaved variety, growing three to five feet high; later maturing than Common Millet, and a heavy yielder. The heads, though numerous, are very large and compact. The seeds are contained in rough, bristly sheaths and are round, golden yellow and very attractive in appearance.

3 Lbs. postpaid 55c; for larger lots inquire for prices. An improved large

## MISCELLANEOUS FARM SEEDS—Continued

Prices of all articles quoted on this page subject to change.

RAPE, DWARF ESSEX

Rape DWARF ESSEX FOR SOWING. There is but one variety of Rape that has proven profitable to sow in America and that is the Dwarf Essex. Do not be deluded into buying inferior grades offered by unscrupulous dealers through exaggerated advertisements. Such seed is often more or less mixed with the annual variety which is not only worthless as forage, but once planted is likely to become a pernicious weed. There is no plant that will give as heavy a yield of forage at such a small cost as this, and its general cultivation would add largely to the profits of American farms. Especially valuable for green manuring and pasture. When fed off by sheep, it will probably do more to restore and make profitable exhausted soils than any other plant. Biennial.

Ground should be prepared same as for turning Sow in

other plant. Biennial.
Ground should be prepared same as for turnips. Sow in June or July, with a turnip drill, in rows two and one-half feet apart, at the rate of two and one-half pounds of seed per acre. It may be sown broadcast, either with other fall forage crops or by itself, using from one to five pounds of seed per acre. Lb. 25c, postpaid. By freight or express, at purchaser's expense, 10 Lbs. \$1.25, 100 Lbs. \$6.50

Rye, Spring Although this grain is often planted esit to any other, its principal value is as a "catch" crop to sow where winter grain has failed. Straw shorter and stiffer than the winter variety and always easily secured. The grain, although smaller, is of equal value. 3 Lbs. 50c, postpaid. For larger quantities inquire for prices.

## Sugar Cane (Sorghum)

Albaugh Early

The best early variety and the one which we especially recommend for the north where the season is short. It is practically as early as the old Early Amber and yields much more per acre either of syrup or seed. The plant is large, of strong, vigorous and erect habit and stands up much better than Early Amber. It may be planted as late as the 15th of June and will be in condition to harvest for syrup in September. Cane seed should not be planted before the weather is warm in the spring. Three to four pounds of seed are required per acre.

1b. 20c; postpaid; 100 Lbs. \$6.00, by freight or express, at purchaser's expense. expense.

Early Orange large, of strong and vigorous habit and does not fall down. It is early and aften yields as much as 240 gallons of very beautifully colored and highly flavored syrup to the acre. We recommend it highly to all desiring a superior cane. Lb. 20c, postpaid; 100 Lbs. \$6.00, by freight or express at purchaser's expense.

Imperial This new variety is particularly valuable for feeding stock, as well as for sugar making. The plants do not grow as tall as Early Orange or Albaugh Early but show a decided tendency to stool, or send up shoots. The cane is very leafy and comparatively slender and practically the entire plant is suitable for feed. Our seed is northern grown and should not be confused with the inferior western and south-western grown cane. Lb. 20c, postpaid; 100 Lbs. \$6.00, by freight or express at purchaser's expense.

Sunflower LARGE RUSSIAN. This has very large heads borne at top of a single unbranched stem with much more and larger seed than unbranched stem with much more and larger seed than the common sorts. It is used extensively for feeding poultry. Sow as soon as ground is fit for planting corn, in rows five feet apart and ten inches apart in row. Cultivate same as corn. When the seed is ripe and hard, cut off the heads and pile loosely in a rail pen having a solid floor or in a corn crib. After curing so that they will thresh easily, flail out or run through a threshing machine and clean with a fanning mill. This variety will yield 1,000 pounds or more of seed per acre. Some species are planted largely in the flower garden for ornament. (See Sunflower, page 87.) Pkt. 5c; \$4 Lb. 10c; Lb. 25c; postpaid; for larger quantities inquire for price.

Vetches or Tares SPRING (Vicia sativa) A perennial pea-like plant grown as an annual in the north. Desirable as a forage plant and valuable as a cover-crop for orchards. Culture same as for field peas. Sow two bushels per acre. Lb. 25c, postpaid; for larger lots inquire for prices.

Vetches SAND, WINTER OR HAIRY (Vicia villosa)
Soils so poor and sandy that they will produce but little
clover. The plants, when mature, are about forty inches
high and if cut for forage as soon as full grown and before setting seed, they will start up again and furnish even a larger crop than the first. Seed round, black and should be sown one and one-half bushels to the acre. Lb. 30c; for larger lots inquire for prices.

### A DESCRIPTIVE LIST OF

# HOICE FLOWER SEEDS

OST flowering plants will live in almost any soil, but to give them a fair chance to develop, some care should be taken to make the ground suited to their needs. Many flowers are better if produced on plants of vigorous growth, hence a portion of the garden should be prepared by deep digging, thorough pulverization and liberal enriching with large quantities of well rotted manure. Since some other varieties produce the largest and finest colored flowers when grown on rather light, poor soil, a portion of the garden should not be enriched.

Cultural directions are given on the packets, and we urge purchasers to study them carefully. While some seeds need special treatment, the following general rules will apply to all. Make the surface of the soil as fine, smooth and level as possible; do not plant when the ground is wet; cover each lot of seeds to a uniform depth, which should not be more than four or six times the diameter of the seed: press the soil firmly over the seed; plant in rows, so that the starting plants can be seen easily; thin out the young plants to prevent crowding and keep entirely free from weeds.

Verticillatus. A beautiful climber having feathery foliage and scarlet berries which are quite ornamental. Hardy perennial; ten to fifteen feet high...Pkt. 10c.

# STER

The Aster, in its many varieties, is not only one of the most profitable annuals for the professional florist but also one of the most satisfactory for the home garden. The plants are usually of vigorous growth and quite hardy, even enduring a slight frost without serious injury. By planting the different strains and at different times, one may have in the latitude of Detroit a constant succession of bloom from the last of July till the middle of October, without the aid of a greenhouse or even a hotbed. Asters do best in moderately light soil, but will thrive in almost any used for a garden provided it is well enriched and made friable.

The seed may be planted out of doors as soon as the ground is warm and dry and at intervals till the first of July. The more costly seed may be sown in boxes kept in the house or in a hotbed, but given plenty of air and light and the young plants set in the open ground as soon as the weather is favorable.

Insects, such as the red spider, may be kept at bay by frequently spraying with clear water, or for insects that eat the foliage add one-fourth teaspoonful of Paris Green to ten gallons of water. Sprinkle with tobacco water or dust to keep off the plant louse. We offer choice seed that has been grown for us from the best types by the most skillful cultivators in America and Europe and which is more certain to give good results than most of that on the market.

Extra Early Hohenzollern

Plants of medium size, extremely early and producing abundantly; blooms of the largest early white aster. Oz. \$1.50. Pkt. 10c.

The Bride. A distinctive blush white. Oz. \$1.50. "10c.

Bartonia Aurea

A pretty flowering plant of the gentian family and somewhat like a wild rose in appearance, producing a profusion of fine, bright metallic yellow blossoms about two inches across and fragrant in the eyening. Tender annual; one foot high.....

Begonia Some of the newer forms of Begonias are among the most brilliantly beautiful of flowering plants. With care they can be grown from seed. Sow in February covering of earth. Cover the pot with glass and keep in a warm but shaded place, taking great care not to wash out the very small seeds or young plants in watering. The plants will give an abundance of bloom the first year and at the end of the season they may be dried off by withholding water, the tubers kept in a dry place free from frost and planted the following spring, when they will bloom more freely than before.

#### FIBROUS ROOTED BEGONIAS

Of the kinds offered under this head Begonia

Of the kinds offered under this head Begonia Rex is grown for its very attractive ornamental foliage, while the others are among the most desirable for flowering in the house, or in partly shaded locations outdoors.

Vernon (Semperflorens atropurpurea)

Flowers brilliant, rich red, set off perfectly by the abundant, glossy green leaves, which are broadly margined with bronze and purple. Extremely hardy and floriferous; the best of the semperflorens class...Pkt. 15c.

Semperflorens alba. A very useful variety, well adapted for house or outdoor culture. Plants of compact dwarf habit, and under proper treatment almost continuous bloomers. Easily grown; flowers very attractive blush white.

rose colored. Pkt. 15c.
Rex. Ornamental leaved varieties; finest mixed. "25c. For Begonia Bulbs, see Bulbs and Roots, page 93.

BELLIS-(See Daisy)

BIGNONIA RADICANS

Brachycome (Swan River Daisy) A delicate, half hardy annual, six inches high, effective for edgings, beds or rustic baskets. Produces freely daisy-like flowers about an inch in diameter and in shades from dark blue to nearly white. Mixed...Pkt. 5c.

Briza Maxima (Ornamental Grass) Grows about one foot high and is valuable for winter bouquets and wreaths. The seed clusters are heart-shaped and gracefully poised on such slender stems that they

Bignonia Radicans (Trumpet Vine) One of the most showy, certainly one of the best hardy, deciduous flowering climbers for covering verandas, arbors, trunks of trees, old walls, etc. Vines should be moderately pruned and well trained so as to afford a good circulation of air, thus insuring more and better bloom. Flowers brilliant scarlet, trumpet shaped. Hardy perennial.....Pkt. 10c.

BEGONIA VERNON

Browallia These handsome, profuse bloomers are used freely both for indoor and outdoor planting on account of the ease with which they may be grown and their usefulness for cutflowers. Usually started indoors but if sown outdoors the plants when small should be protected from the hot sun. Half hardy annual.

Roezli. About twelve inches high; produces large, white flowers, often tinted with blue....Pkt. 5c.

Elata. Height eighteen inches; blue and white flowers mixed....Pkt. 5c.

Bryonopsis An ornamental climber of the gourd family, bearing green fruit which changes in color as the season advances, to bright scarlet striped with white. Tuberous rooted perennial but may be treated as a tender annual; about ten feet high...Pkt. 5c.

BUTTERFLY FLOWER-(See Schizanthus)

Calampelis Scabra (Eccremocarpus) A beautiful tender climber from Chili, with graceful, delicate foliage. Late in the season it produces racemes of bright orange flowers which in turn give place to delicate, pendant seed pods. Tender perennial; fifteen feet

Calandrinia Fine dwarf plants for growing in masses; produce an abundance of blossoms; well suited for edgings, rockeries, etc. Tender annual; twelve to fifteen inches high.

Grandiflora. Magenta. Pkt. 5c. | Umbellata. Crimson. Pkt. 5c.

Calceolaria A favorite and universally admired genus distinguished by its of yellow, splashed, spotted and blotched with orange, rose, or brown, two plants rarely having flowers marked exactly alike. Grown in pots in the conservatory or greenhouse. Herbaceous annuals or shrubby evergreen perennials.

Hybrida grandiflora. Flowers of immense size; seeds saved from finest specification. CALENDULA—(See Marigold) eter: exceedingly valuable for decorative purposes. Pkt. 10c.

Callirhoe (Poppy Mallow) Very handsome border plants, producing through a long season rich, purplered flowers. Hardy annual; about fifteen inches high Choicest Mixed Pkt. 5c.
Chamellia Japonica House or greenhouse evergreen, from seeds though they germinate slowly. As varieties do not come true from seed one may have the pleasure of getting something distinct and of great merit. Mixed Fine Double Varieties...... CAMPANULA—(See Canterbury Bell) .....Pkt. 25c.

COREOPSIS TINCTORIA

Canary Bird Flower (Tropæolum canariense) small, curiously shaped, canary colored blossoms. Will bloom freely from July until killed by frost. Tender annual. Height about twenty feet. Oz.40c. Pkt. 5c.

Candytuft (Iberis) Showy, branching plants about fifteen inches high. Considered indispensable for cutting and very effective in beds, masses or rockeries. If sown in spring the plants will bloom from July to September or if in the fall will blossom from July to the Hory to a transfer. from May to July. Hardy annual.

Lilac. Shading to light purple. Oz. 20c......Pkt. 5c. 

Canna Stately, ornamental plants producing clusters of large flowers of the most intense, varied and brilliant colors. Very desirable for greenhouse or bedding out-doors. Plant the seeds in February, first soaking them for a day in hot water. In August the plants come into bloom and continue to flower very freely until cut down by frost. Tender perennial. Store roots in cellar in winter.

Finest Large Flowering Mixed. Plants are about three feet high. Oz. 30c. Pkt. 5c.

Canterbury Bell (Campanula medium)
Handsome, hardy biennial of stately growth,
rich color and profuse bloom. Succeeds best in light, rich
soil and in the fall should be transplanted or thinned to

soin and in the last should be transplanted of thinled to eighteen inches or two feet apart and given some protection in severe winter weather. Has large bell-shaped flowers which are strikingly effective, colors white, and various shades of violet, rose, lilae and blue. Height two to four feet. One of the wild forms of Campanula is the "Blue Bells of Scotland."

" 5c.

Calycanthema Mixed. Flowers large and of fine form, white, lilac, rose and purple. Known also as "Cup and Saucer" plant, the calyx forming a cup round the base of the bell..........Pkt. 10c.

CARPET OF SNOW-(See Alyssum)

CANTERBURY BELL

(Dianthus Caryophyllus) "Carnation," "Pink," "Clove Pink," "Florists Pink," are names applied by different people to the same or to different plants of several species as well as to hybrids between them. They are all easily grown from seed and very free blooming, the flowers being bright colored and with a most delicious clove-like frateur. Others do best in the open ground and are among the most desirable of garden plants. Half hardy perennial.

Large Flowering Carnations Best Suited for Pot Culture

The sorts most grown by florists who are constantly striving to produce new varieties. While choice varieties are propagated by cuttings, planters may get some as good from the seed we offer and a large proportion double and very beautiful.

Double Perpetual Flowered Mixed. An exceedingly beautiful variety producing very double flowers of various shades and colors. Seed saved from choicest double

....Pkt. 35c.

did quality in good proportion...Pkt. 25c.

#### Varieties Adapted to both Pot and Outdoor Culture

For outdoor culture a rich compost is indispensable to the production of fine carna-tions; there is scarcely any plant to which a congenial soil is of so much importance.

a congenial soil is of so much importance.

Early Double Snow White. A splendid sort for either pot culture or the garden. The plants are vigorous, erect and bushy in growth; come into flower very early and furnish abundant bloom for a long time. The flowers are large, double clear white and wonderfully force or the condition of the condition o and wonderfully fragrant......Pkt. 25c.

Marguerite. The plants of this wonderfully fine strain may be made to bloom in four 

but come into bloom a little earlier and are fully as floriferous. Flowers double, fra-grant and of rich, deep red color. Pkt, 15c.

CARNATION MARGUERITE

Castor Bean (Ricinus) Tall majestic plants for lawns; with leaves of glossy green, brown, or bronzed metallic hue and long spikes of scarlet, or of green, prickly fruit. Makes a rapid, vigorous growth in rich soil. Tender annual; six to fifteen feet high.

A class of plants having colored foliage and in which the innumerable small flowers and seed vessels together with their supports form a very brilliantly colored mass, sometimes gracefully arranged like plumes and sometimes more dense, being corrugated and frilled at the edge like a cock's comb. They form the gayest possible decoration, retaining their brilliant coloring for a long time after being cut. Commonly grown out of doors but also adapted for the greenhouse and conservatory. Half hardy annuals. Plant in light, rich soil and give plenty of moisture.

Pyramidalis plumosa mixed. The plant is over two feet high, and is covered with long, brilliantly colored and gracefully formed plumes in red, yellow or violet.

Pkt. 5c.

Triumph of the Exposition. Plant of pyramidal form, bearing many exceedingly graceful, feather-like spikes of intensely brilliant crimson color. Height about two feet.

Pkt. 10c.

Variegated. A strain between the plumosa and cockscomb types in which the plumes are broadened at the top; variegated and stringed in red and vellow.

Pkt. 10c.

Pkt. 10c.

egated and striped in red and yellow....

Dwarf and Tree Cockscomb Types

leaves and forms immense bright, crimson combs.Pkt. 10c.

Pkt. 10c.

Pkt. 10c.

Pkt. 5c.

This beautiful dwarf plant has dark red Dwarf Rose. Large rose-colored combs.......Pkt. 10c.

The Centaureas are an ex-

cedingly interesting genus of plants, embracing annuals which though botanically alike are very different in appearance. The following varieties are easily grown from

#### Varieties Cultivated for their Foliage

Gymnocarpa. Sometimes called Dusty Miller. Valuable because of its silvery foliage and graceful drooping habit of growth. Half hardy perennial; one-half to two feet high.

#### Varieties Cultivated for their Flowers

Double Mixed (Bachelor's Button) Produces larger, more globular flowers than the common variety. Oz. 20c. .Pkt. 5c.

Marguerite.

Imperialis Mixed. An excellent sweet scented variety. The flowers are finely laciniated and are about the size of a carnation. They have long stems and keep well after cutting. The colors range through white, rose, filac, purple and yellow. Hardy annual; about eighteen inches high... Pkt. 10c.

CENTAUREA MARGUERITE

## hrysanthemum

These common "summer Chrysanthemums" These common "summer Chrysanthemums" are showy and effective in the garden and desirable for cut flowers. Our list affords a fine range for selection. These annuals are not the winter flowering sorts sold by florists and propagated only by division of roots.

#### Early Blooming Garden Sorts

Morning Star. Very handsome, large, single flowers, bright yellow with deeper center; excellent for cutting and popular with florists for both spring and fall markets....Pkt. 10c.

Carinatum Eclipse. Pure golden yellow, with a bright purplish searlet ring or center on the ray florets, the disc being dark brown; very striking.....Pkt. 5c.

Mixed. The choicest Carinatum and Corinarium varieties, both single and double......Pkt. 5c.

#### Later and Taller Fall Blooming Sorts

Indicum, fl. pl. Half hardy perennial; desirable as pot plant but sown more generally outdoors; very double, mixed colors....Pkt. 25c. Superb Mixed. Seed from the finest Chinese and Japanese double varieties.....Pkt. 25c.

CHEIRANTHUS CHEIRI—(See Wallflower)

MARITIMUS — (See Virginian CHEIRANTHUS Stock)

Cineraria Cinerarias are easily grown from seed, require little heat, are free blooming and give brilliant flowers

Clarkia

Beautiful, hardy annuals from California, with rose-colored, white and purple flowers, in delicate but very brilliant shades. About eighteen inches high and profuse bloomers. Mixed Double.Pkt. 5c.

COCKSCOMB-(See Celosia)

COIX LACHRYMA—(See Job's Tears)

Probably the best known and most popular of ornamental foliage plants. Leaves are of many shades of color and have a rich velvety appearance of extraordinary beauty. No lawn should be without these decorative plants. Tender perennial.

shades of rich red, bronze and copper color and quite

until late in autumn.

Oz. 30c...... CUCURBITA—(See Gourd)

Well known and universally ad-Cyclamen well known and universally adjusted to the red and white flowers. Seed sown in spring, by autumn following spring Tender perennial; one foot high.

Margaret. A clear white......Pkt. 25c. Persicum, mixed. Of great beauty and many colors.Pkt. 15c. Persicum giganteum, mixed. Characterized by beautiful foliage and profuse bloom; each flower is from two to two and one-half inches long. Very choice.....Pkt. 20c.

Cypress Vine (Ipomæa quamoclit) A most beautiful climber with delicate, dark green, feathery foliage and an abundance of bright, star-shaped, scarlet or white blossoms which contrast most effectively with the graceful foliage. Tender annual; about fifteen feat high about fifteen feet high.

STOCK, EARLY FLOWERING BROMPTON

Solanum Pseudo Capsicum Nanum. Ornamental fruit bearing plants, useful for conservatory or drawing room decoration. The foliage is handsome and contrasts finely with the miniature, round, scarlet fruit with which the plant is covered. Tender perennial; about one and one-half feet high. Pkt. 10c. STIPA PENNATA—(See Feather Grass)

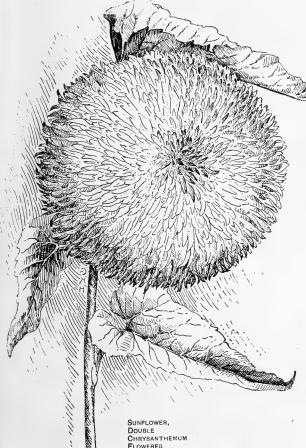

(Helianthus)

Sunflower

improved varieties are coming into special favor as a background for lawns and in front of high fences. Valuable also as a screen to hide unsightly places and sometimes used to mitigate the evil of adjacent swamp holes. Hardy annual. Sunflowers grow readily in almost any soil but do best on light, rich, limestone or alluvial land well supplied with moisture and not shaded by trees or buildings. buildings.

Double Chrysanthemum Flowered. A tall plant growing seven feet high and blooming profusely all summer. Flowers are large, very double, and resemble chrysanthemums. The color is a splendid, rich, golden-yellow, free from any black center. Oz. 20c. Pkt. 5c.

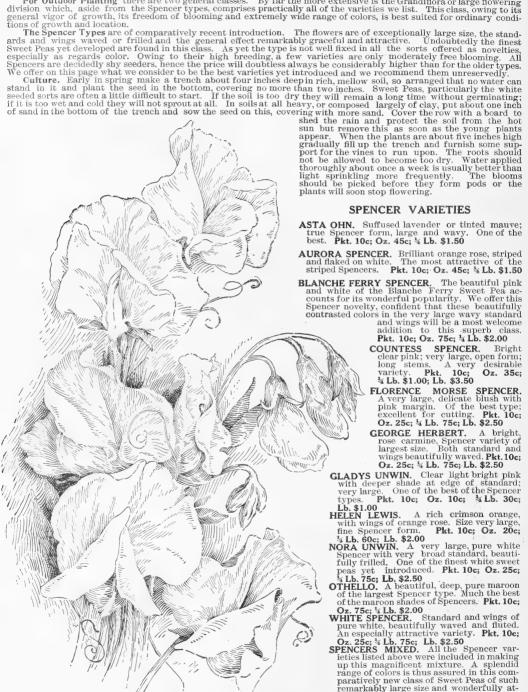

Stella. The plant of this fine variety is well branched and bushy and attains a height of about three feet. The flowers are two to three inches in diameter. feet. The flowers are two to three inches in diameter and are of an unusually pure golden yellow with black dises and are borne on long stems well above the foliage. They come into bloom very early and are produced in abundance throughout the season. The graceful habit of growth, convenient size and splendid lasting qualities make this a useful and favorite variety for cutting and in extensive decorative work. Oz. 30c....Pkt. 5c.

No garden is too small for a row of Sweet Peas and no estate, however extensive or magnificent, should fail to include

No garden is too simal for a row of sweet reas and no estate, nowever extensive or magnificent, should fail to include many varieties of this most popular flower. Hundreds of varieties have been offered for sale by seedsmen but owing to recent marked improvements many sorts are decidedly inferior and have been dropped from our list.

Extra Early Blanche Ferry and Earliest White, being the earliest known varieties, are excellent for growing indoors. For Outdoor Planting there are two general classes. By far the more extensive is the Grandiflora or large flowering division which, aside from the Spencer types, comprises practically all of the varieties we list. This class, owing to its general vigor of growth, its freedom of blooming and extremely wide range of colors, is best suited for ordinary condi-

SPENCER SWEET PEAS

# thoroughly about once a week is usually better than light sprinkling more frequently. The blooms should be picked before they form pods or the plants will soon stop flowering.

ASTA OHN. Suffused lavender or tinted mauve; true Spencer form, large and wavy. One of the best. Pkt. 10c; Oz. 45c; ¼ Lb. \$1.50

SPENCER VARIETIES

AURORA SPENCER. Brilliant orange rose, striped and flaked on white. The most attractive of the striped Spencers. Pkt. 10c; Oz. 45c; ¼ Lb. \$1.50

BLANCHE FERRY SPENCER. The beautiful pink and white of the Blanche Ferry Sweet Pea accounts for its wonderful popularity. We offer this Spencer novelty, confident that these beautifully contrasted colors in the very large wavy standard and wings will be a most welcome addition to this superb class.

Pkt. 10c; Oz. 75c; 4 Lb. \$2.00

COUNTESS SPENCER. Bright clear pink; very large, open form; long stems. A very desirable variety. Pkt. 10c; Oz. 35c; Oz. 35c; 4 Lb. \$1.00; Lb. \$3.50

FLORENCE MORSE SPENCER.
A very large, delicate blush with pink margin. Of the best type; excellent for cutting. Pkt. 10c; Oz. 25c; 4 Lb. 75c; Lb. \$2.50

GEORGE HERBERT. A bright, rose carmine, Spencer variety of largest size. Both standard and largest size. Both standard and wings beautifully waved. Pkt. 10c;

Oz. 25c; 4 Lb. 75c; Lb. \$2.50 GLADYS UNWIN. Clear light bright pink with deeper shade at edge of standard; very large. One of the best of the Spencer Pkt. 10c; Oz. 10c; 4Lb. 30c;

Lb. \$1.00 HELEN LEWIS. Lb. \$1.00
HELEN LEWIS. A rich crimson orange, with wings of orange rose. Size very large, fine Spencer form. Pkt. 10c; Oz. 20c; ½ Lb. 60c; Lb. \$2.00
NORA UNWIN. A very large, pure white Spencer with very broad standard, beautifully frilled. One of the finest white sweet work art introduced Pkt. 10c; Oz. 25c.

peas yet introduced. Pkt. 10c; Oz. 25c; 4 Lb. 75c; Lb. \$2.50
OTHELLO. A beautiful, deep, pure maroon of the largest Spencer type. Much the best of the maroon shades of Spencers. Pkt. 10c;

of the maroon shades of Spencers, Pkt. 10c; Oz. 75c; ½ Lb. \$2.00
WHITE SPENCER. Standard and wings of pure white, beautifully waved and fluted. An especially attractive variety. Pkt. 10c; Oz. 25c; ½ Lb. 75c; Lb. \$2.50
SPENCERS MIXED. All the Spencer varieties listed above were included in making up this magnificent mixture. A splendid range of colors is thus assured in this comrange of colors is thus assured in this comparatively new class of Sweet Peas of such remarkably large size and wonderfully attractive form. Pkt. 10c; Oz. 25c; ¼ Lb. 75c; Lb. \$2.50

## SWEET PEAS-Continued

WHITE

BLANCHE BURPEE. A splendid pure white variety. While not so profuse a bloomer nor as hardy a plant as the Emily Henderson, the flowers are beautiful. Pkt. 5c; Oz. 10c; ½ Lb. 20c; Lb. 60c.

DOROTHY ECKFORD. Vine very robust and exceedingly floriferous. Flowers of extra large size, pure white, beautifully shell shaped; usually three on a stem. Pkt.5c; Oz. 10c; ½ Lb. 20c; Lb. 65c.

EARLIEST WHITE. The earliest blooming white Sweet Pea. Similar in form to and selected from Extra Early Blanche Ferry. Its extreme earliness makes it most desirable for forcing. Pkt. 10c; Oz. 20c; ½ Lb. 60c; Lb. \$2.00

EMILY HENDERSON. A bold, well formed, clear white flower. Wings broad and well expanded. An early and wonderfully free and persistent bloomer. Pkt. 5c; Oz. 10c; ½ Lb. 20c; Lb. 50c.

MONT BLANC. This variety originated in the Extra Early Blanche Ferry and like that sort the vine is of dwarf, slender, very graceful habit with narrow leaves. Flowers of good form and size and very clear white color. Pkt. 5c; Oz. 10c; ¼1b. 20c; Lb. 60c.

#### LIGHT YELLOW

HON, MRS. E. KENYON. The best of the deeper primrose shades; a beautiful, large semi-hooded flower. Pkt. 5c; Oz. 10c; 4Lb. 20c; Lb. 60c.

QUEEN VICTORIA. Light primrose of hooded form showing a pink tint in the bud; clear, soft primrose when matured. Pkt. 5c; Oz. 10c; & Lb. 20c; Lb. 60c.

#### RED WITH WHITE WINGS

BLANCHE FERRY. Standard medium sized, fine form and bright pink color; wings large, rounded and nearly white. Pkt. 5c; Oz. 10c; ¼ Lb. 20c; Lb. 70c.

EXTRA EARLY BLANCHE FERRY. This is the pioneer extra early sweet pea and bears much the same relation to the other sorts of this section that the original Blanche Ferry does to other American sorts, in that it is of vigorous and hardy though dwarf habit and a wonderfully free and persistent bloomer. It will be found to be the first to furnish flowers either in greenhouse or out of doors and it will continue to furnish them in great abundance longer than most varieties. Pkt. 5c; Oz. 10c; ½ Lb. 25c; Lb. 75c.

## LIGHT PINK

AGNES ECKFORD. A most delicate shade of light pink; medium large, of hooded form. Pkt. 5c; Oz. 20c; ¼Lb. 60c; Lb. \$1.75

COQUETTE. Large, finely formed flower. Standard warm primrose, shaded purple; wings primrose. Pkt. 5c; Oz. 10c; 4Lb. 20c; Lb. 60c.

COUNTESS OF LATHOM. A very fine, self-colored cream pink of medium size; hooded form. Pkt. 5c; Oz. 10c; ¼Lb. 20c; Lb. 60c.

DAINTY. White, edged with light pink. Hooded form; very long stems. Similar to but lighter than Eliza Eckford. Pkt. 5c; Oz. 10c; 4Lb. 20c; Lb. 60c.

KATHERINE TRACY. The color is a soft but brilliant pink in wings and standard. Plants vigorous and give a profusion of flowers which continue large and fine until the end of the season. Pkt. 5c; Oz. 10c; 4Lb. 20c; Lb. 50c.

LOTTIE HUTCHINS. Standard and wings of light primrose with stripes of light pink. One of the best hooded shapes. Pkt. 5c; Oz. 10c; ¼Lb. 20c; Lb. 55c.

LOVELY. Flowers very large, fine form. A delicate shell pink tinged with yellow, often four flowers on a stem. Pkt. 5c; Oz. 10c; ¼Lb. 20c; Lb. 60c.

PRIMA DONNA. The stems bear three or four very large perfect flowers of a brilliant yet soft shade of pink. Pkt. 5c; Oz. 10c; ¼ Lb. 20c; Lb. 60c.

SADIE BURPEE. (Black seeded) Standard round, very thick; delicate shell pink, wings a little lighter than standard. Similar to Mrs. Sankey but larger. Pkt. 5c; Oz. 10c; ¼ Lb. 20c; Lb. 60c.

STELLA MORSE. Flowers of a peculiar warm salmon-pink. A combination yellow and pink which is distinct and very attractive. Pkt. 5c; Oz. 10c; ¼Lb. 20c; Lb. 60c.

EXTRA EARLY BLANCHE FERRY

#### **ORANGE PINK**

BOLTON'S PINK. Orange pink veined with rose, large size; semi-hooded form. An excellent variety. Pkt. 5c; Oz. 10c; ½Lb. 25c; Lb. 80c.

LADY MARY CURRIE. A large, well formed flower of brilliant orange pink color. Similar to Lady Penzance but rounder and of more brilliant color. Pkt. 5c; Oz. 10c; Lb. 20c; Lb. 60c.

MISS WILLMOTT. A fine semi-hooded type; standard orange pink; wings rose tinted with orange. large size; long stems; plant very vigorous. Oz. 10c; 4Lb. 25c; Lb. 75c.

#### PINK AND RED STRIPES

AMERICA. White, nearly covered with splashes, stripes and dots of exceedingly bright carmine. The most brilliant red striped sort. Pkt. 5c; Oz. 10c; 4Lb. 20c; Lb. 60c.

AURORA. Very large and of fine form. The standard and wings are striped and flaked with delicate orange-salmonpink over white. Pkt. 5c; Oz. 10c; ¼ Lb. 20c; Lb. 60c.

MRS. JOSEPH CHAMBERLAIN. Very large and perfectly shaped flowers; white, striped with bright rose-carmine. Pkt. 5c; Oz. 10c; ¼Lb. 20c; Lb. 60c.

## SWEET PEAS-Continued

#### SHADES OF RED

COCCINEA. Distinct in color, a bright cherry red and unlike any other we offer. Very pleasing and effective. Pkt. 5c; Oz. 10c; ½ Lb. 20c; Lb. 60c.

FIREFLY. Very bright, intense crimson scarlet, of good size and form. Pkt. 5c; Oz. 10c; ¼ Lb. 20c; Lb. 70c.

HER MAJESTY. The flowers are very large and both the standard and wings are beautifully curved and a delicate rose-pink color. Pkt. 5c; Oz. 10c; 4 Lb. 20c; Lb. 65c, JOHN INGMAN. Rose carmine, showing veins of deeper

JOHN INGMAN. Rose carmine, showing veins of deeper shade: large size, open form with wavy edges. Pkt. 5c; Oz. 10c; 4Lb. 30c; Lb. \$1.00

KING EDWARD VII. A bright crimson scariet of largest size; open form well expanded, round standard. One of the very best. Pkt. 5c; Oz. 10c; ½ Lb. 20c; Lb. 70c,

LORD ROSEBERRY, Magenta rose, veined with a deeper shade: hooded form. Larger and brighter than Lord Kenyon. Pkt, 5c; Oz. 10c; & Lb. 20c; Lb. 65c.

MRS. DUGDALE. A large, finely formed flower of a peculiar shade of primrose overlaid with crimson rose. Pkt. 5c; Oz. 10c; & Lb. 20c; Lb. 65c.

PRINCE OF WALES. Flowers very large and a peculiar brilliant red, distinct in shade from any other sweet pea. Very attractive. Pkt. 5c; Oz. 10c; ¼ Lb. 25c; Lb. 75c.

QUEEN ALEXANDRA. A magnificent bright scarlet red, very large, semi-hooded. Unsurpassed in brilliancy of color. Pkt. 5c; Oz. 10c; ½ Lb. 30c; Lb. \$1.00

ROYAL ROSE. One of the largest, most finely formed flowers. Standard deep rose pink; wings a lighter shade of same color. Pkt. 5c; Oz. 10c; ¼ Lb. 20c; Lb. 60c.

SALOPIAN. One of the most brilliant and richly colored sorts yet introduced. The flowers are of faultless form, large and a very rich, brilliant cardinal red. Pkt. 5c; Oz. 10c; 4Lb. 20c; Lb. 60c.

#### BLUE AND PURPLE

CAPTAIN OF THE BLUES. Standard large, broad, bright purple blue; wings expanded, lighter and brighter blue than standard. Pkt. 5c; Oz. 10c; ½ Lb. 20c; Lb. 60c.

COUNTESS OF CADOGAN. Stems very long, each bearing three or four flowers, a little darker than Navy Blue. Pkt. 5c; Oz. 10c; ¼ Lb. 25c; Lb. 75c.

DUKE OF WESTMINSTER. Standard purple, wings of purple shading to violet, large size, hooded form. Pkt. 5c; Oz. 10c; ¼ Lb. 20c; Lb. 60c.

FLORA NORTON. The best clear blue sweet pea. Medium size, open form usually three flowers on a stem. Pkt. 5c; Oz. 10c; ¼ Lb. 20c; Łb. 60c.

LORD NELSON. Deeper in color than Navy Blue and especially on the vine is a very attractive rich deep blue. Pkt. 5c; Oz. 10c; ¼ Lb. 25c; Lb. 75c.

NAVY BLUE. A true blue, quite distinct. Medium size; semi-hooded form. Pkt. 5c; Oz. 10c; ½ Lb. 20c; Lb. 60c.

#### PURPLE STRIPES

GRAY FRIAR. Very large, finely shaped flowers of delicate heliotrope color, tinged, marbled and dotted with darker shade. Pkt. 5c; Oz. 10c; 4 Lb. 20c; Lb. 60c.

SENATOR. Standard broad, very large, delicate lavender, nearly covered with stripes and splashes of purple maroon; wings medium sized, round, striped with a bluer shade than the standard. Pkt. 5c; Oz. 10c; <sup>1</sup>/<sub>4</sub> Lb. 20c; Lb. 60c.

#### LAVENDER AND LIGHT BLUE

COUNTESS OF RADNOR. Self colored in a very distinct and beautiful shade of lavender. Pkt. 5c; Oz. 10c; ½ Lb. 20c; Lb. 60c.

DOROTHY TENNANT. Flowers warm violet or mauve, finely formed. Standard broad, hooded; wings large, rounded. Pkt. 5c; Oz. 10c; 4 Lb. 20c; Lb. 60c.

FASCINATION. Standard lilac, wings blue tinged with lilac, the blossom finally turning to a bright blue. Large size, hooded form. Pkt. 5c; Oz. 10c; ¼ Lb. 20c; Lb. 60c.

HELEN PIERCE. Veined and finely mottled bright blue on white. Exceptionally attractive in coloring. Pkt. 5c; Oz. 10c; ¼ Lb. 30c; Lb. \$1.00

LADY GRISEL HAMILTON. A large flower similar in color to Countess of Radnor, but nearer blue. Pkt. 5c; Oz. 10c; <sup>1</sup><sub>4</sub> Lb. 20c; Lb. 60c.

LOTTIE ECKFORD. Standard a peculiar and delicate shade of magenta blue; wings very large, long and shaded lavender, deepening to violet at edge. Pkt. 5c; Oz. 10c; ½ Lb. 20c; Lb. 60c,

MAID OF HONOR. Medium sized flower, nearly white having a distinct edging of blue which gives it a peculiar and very attractive appearance. Pkt. 5c; Oz. 10c; ½ Lb. 20c; Lb. 60c.

MRS. GEORGE HIGGINSON, JR. A very clear delicate shade of lilac blue, self colored; medium size, semi-hooded form, usually three flowers on a stem. Pkt. 5c; Oz. 10c; ½ Lb. 20c; Lb. 60c.

MRS. WALTER WRIGHT. A very large, hooded, rose purple self, changing to rich bluish purple. A splendid variety. Pkt. 5c; Oz. 10c; ½ Lb. 20c; Lb. 60c.

ROMOLO PIAZANNI. Rose purple, changing to lilac and blue. Large size, hooded, and better than Fascination. Pkt. 5c; Oz. 10c; 4 Lb. 25c; Lb. 80c.

#### CLARET AND MAROON

BLACK KNIGHT. One of the darkest varieties. Pkt. 5c; Oz. 10c; ¼ Lb. 20c; Lb. 50c.

BOREATTON. One of the darkest and most richly colored. Standard large, rounded; rich, satin-like maroon. Wings similar in color to standard. One of the best dark varieties yet produced. Pkt. 5c; Oz. 10c; <sup>3</sup>/<sub>4</sub> Lb. 20c; Lb. 50c.

DUKE OF CLARENCE. A fine flower with large standard and wings of uniform shade of dark claret. Pkt. 5c; Oz. 10c; <sup>1</sup>/<sub>4</sub> Lb. 20c; Lb. 50c.

DUKE OF SUTHERLAND. Standard violet and purple, somewhat wavy. Wings violet and indigo. Large size, hooded form. Similar to Monarch but better. Pkt. 5c; Oz. 10c; ½ Lb. 20c; Lb. 60c.

OTHELLO. A very dark maroon, practically self colored with almost black veining. Large size, hooded form. Pkt. 5c; Oz. 10c; ½ Lb. 20c; Lb. 60c.

SHAHZADA. This has a very rich dark maroon standard and deep violet wings. One of the finest dark sorts. Pkt. 5c: Oz. 10c; ½ Lb. 20c; Lb. 50c.

STANLEY. A very beautiful sort. Standard large and flat; color a deep maroon and warmer than Boreatton. Pkt. 5c; Oz. 10c; 4 Lb. 20c; Lb. 60c.

## Mixtures of Sweet Peas

Most people obtain more satisfaction from planting Sweet Peas in mixture than from growing named sorts, but to be successful it is necessary that the seed be of the best quality obtainable. Often what is offered as mixed seed is stock harvested from plants that have come up as volunteers on ground where Sweet Peas have been grown saved or handled so carelessly that it cannot be sold as any distinct variety. The use of such seeds will not give satisfactory results. However, where the seed is grown from the very best stock that can be produced, is mixed in most carefully studied proportions and then the seeds of desirable but shy seeding sorts are added, there is nothing superior for use in the home garden. We assure our customers the Mixtures of Sweet Peas which we offer are the results of as creat-care in selecting as any stocks we grow and as fine flowers are obtained from them as from any seed that can be bought. We invite comparison with any and all others, no matter under what name or at how high prices offered and are certain that a trial will demonstrate the superiority of our mixtures.

This mixture has the seed so flowers are obtained from a plenting the part of the produced seed and it will afford a splenting the produced seeds and it will afford a splenting the produced seeds and it will afford a splenting the produced seeds and it will afford a splenting the produced seeds and it will afford a splenting the produced seeds and it will afford a splenting the produced seeds and it will afford a splenting the produced seeds and it will afford a splenting the produced seeds and it will afford a splenting the produced seeds and it will afford a splenting the produced seeds and it will afford a splenting the produced seeds and it will afford a splenting the seeds of the seed seed and the seeds of the se

Choice Mixed

This mixture has been most carefully grown from our selected stock seed and it will afford a splendid variety of blooms of improved forms and in the widest possible range of desirable colors. We have included in this mixture many high priced, brilliant, English and American novelties. Pkt. 5c; Oz. 10c; 4 Lb. 20c; Lb. 50c.

Ferry's Superb Mixed

We make up this mixture by combining in carefully considered proportions twentyone separate named varieties, each the very choicest of its class. This was done after
first carefully considering the desirability of color, form and freedom of blooming in our many trials of nearly two
hundred different named sorts. Nowhere else can one procure a more magnificent mixture of finely formed and
beautifully colored, large flowering Sweet Peas. Pkt. 5c; Oz. 10c; 4 Lb. 20c; Lb. 65c.

Spencers Mixed

All the Spencer varieties listed on page 88 were included in making up this magnificent mixture. A splendid range of colors is thus assured in this comparatively new class of Sweet Peas of such remarkably large size and wonderfully attractive form. Pkt. 10c; Oz. 25c; & Lb. 75c; Lb. \$2.50

(See page 88 for new Spencer varieties, separate and in mixtures)

Sweet William

(Dianthus barbatus) For display in the garden the Sweet William is unsurpassed. The plants produce a succession of flower clusters, thus affording splendid

bloom for several weeks. The colors are exceedingly

SWAN RIVER DAISY—(See Brachycome)
TAGETES—(See Marigold)
TROPÆOLUM CANARIENSE—(See Canary Bird Flower)
TROPÆOLUM LOBBIANUM—(See Nasturtium Trailing)
TROPÆOLUM MINOR—(See Nasturtium Dwarf)

TOUCH-ME-NOT-(See Balsam)

Tree Cypress (Ipomopsis elegans) A handsome plant like that of the Cypress Vine and with long spikes of beautiful flowers; equally desirable for outdoor or conservatory cultivation. Half hardy biennial; three feet high. Mixed. Oz. 30c. Pkt. 5c.

Valerian, Greek (Polemonium cæruleum) An old stand-Ladder from its pinnately cleft leaves. Flowers blue, nodding at the ends of upright stalks. It blooms in June, is of easy cultiva-tion and perfectly hardy and may be increased by dividing the roots. Sow early in spring, in open border and thin to one foot apart. Perennial; two feet high.......Pkt. 5c.

SWEET WILLIAM

Verbena

The Verbena has been wonderfully improved during the past fifty years in form and size of flower truss and thrives particularly well in American soil. For masses in beds on the lawn no plant excels it. In the varieties may be found every color from white through lilac and rose to purple and very dark purplish blues well as striped sorts. If sown in open ground in May they will bloom in August, but if started in the house in pots in winter they will flower sooner and may be had in constant bloom from June even until after the early, light frosts. Seed should be soaked in lukewarm water before planting and care taken that the soil be very rich. Verbenas can be grown from cuttings, but seedlings are more vigorous and produce more flowers, all being showy and often the clusters have a delicate fragrance. Half hardy perennial trailer which has gained much in popularity through treatment as an annual.

Hybrida White. Produces large, pure white flowers; very floriferous; fine for florists; comes true from seed. Oz. 90c. Pkt. 5c.

Hybrida Italian Striped. Beautiful. Oz. \$1,00.. "10c. Fine Mixed. Embraces all colors. Oz. 75c..... " 5c. Extra Choice Mixed. Includes all the best types and a wide range of splendid colors. Oz. \$1.25...Pkt. 10c.

Mammoth Mixed. Embraces a wide range of the most beautiful colors, the clusters being of largest size. Oz. \$1.75......Pkt. 15c.

Hybrida Compacta Mixed. A distinct sort. The plant forms compact bunches about five inches high and eighteen inches across, covered throughout the season with large trusses of white, scarlet and violet flowers. Flowers well from seed sown in the spring...Pkt. 15c.

Pure White. Beautiful pure white. Oz. 75c....Pkt. 5c. Rosea Alba. White with crimson eye. Oz. 75c. " 5c. Mixed. Oz. 75c..... " 5c. VIOLA TRICOLOR—(See Pansy)

VINCA

Virginian Stock (Cheiranthus maritimus) The plants are covered with a dense mass of beautiful blossoms and are very useful for border or edging. A continual succession of blossoms may be kept up the whole season by sowing at intervals through spring and summer. Hardy annual; about nine inches

Red and white, Mixed ......Pkt 5c.

Wallflower

(Cheiranthus cheiri) An old favorite garden flower. The large, massive spikes of the Wallflower are very conspicuous in beds and borders and are very useful in making bouquets. Sow the seed early in hotbeds and while the plants are small prick them out into pots and sink in the earth. On approach of cold weather remove the pots to the house and the plants will bloom all winter. Although a woody perennial it is best to renew the plants from seed, for they begin to fail after having bloomed one or two years. Tender perennial; one and one-half feet high. one and one-half feet high.

Early Brown. Brownish-red, fragrant flowers; large, thick spikes; early. Tender biennial. Oz. 25c......Pkt. 5c. Golden Tom Thumb. Free flowering, of dwarf and compact. 

Whitlavia Grandiflora. A plant with delicate, handsome foliage, producing a constant succession of beautiful, purple, bell-shaped flowers about half
an inch long and borne in drooping clusters. In heavy,
wet soil it does not succeed well but in light, sandy loam
few flowers give more satisfaction. Sow the seed in open
border early in spring. Hardy annual; one foot high.Pkt. 5c.

Wigandia Caracasana Very ornamental plants with immense, perfectly shaped leaves, the veins and the stems being covered with crimson hair. It grows rapidly and should be formed into a bush. Its large leaves and clusters of lilac flowers which continue to open in succession for a long time give the plant a tropical aspect and make it valuable for garden and lawn decoration. Seeds if sown early in spring in hotbed will produce large plants by the middle of summer. Pkt. 10c.

Wistaria Chinensis One of the most beautiful and rapid growing of hardy climbers. Frequently blooms both in spring and fall. The flowers are pale blue, pea-shaped and are borne in long, drooping clusters, often over a foot in length. Seeds should be sown in mellow loam early in the spring, or in greenhouse or hotbed in winter and when plants are one foot high transplant into permanent situations. Pkt. 20c.

**Xeranthemum** (Everlasting) A free flowering plant of compact habit and of the easiest cultivation. The leaves are covered with a silvery 

Zea Maize (Zea Japonica fol. variegatis) A varielaves striped green and white. Half hardy annual; six feet high. Also known as Striped Japanese Corn.Pkt. 5c.

Sow the seed early in spring, in open ground and trans-Double vellow. Oz. 35c....

Double choice mixed, including the above colors, very fine. Oz. 30c.; Lb. \$3.00	"	5c.
Lilliput, double mixed. This strain grows about one foot high and bears a profusion of comparatively sma very double, globular flowers about one inch in diameter, very brilliant in color	il,	' 10c.
Pompon, double mixed. The globular flowers are fully as varied and brilliant in color as the ordinary Zinni and about half its size. Oz. 40c.	a .	' 5c.
Haageana, double. Dwarf variety with double flowers of a deep orange color, about one and one-quarter inche in diameter; fine for cut flowers; height one foot.	s .	' 10c.

" 15c.

# BULBS AND ROOTS FOR SPRING PLANTING

All bulbs and roots will be sent by mail or express, charges prepaid, when ordered at single or dozen rates. At the 100 rate they will be sent by express or freight, the purchaser paying the charges unless otherwise stated. Not less than six of any one variety supplied at dozen rates and not less than 25 at the 100 rate. Orders with money should be sent to us as early as possible and they will be filled in rotation. Bulbs subject to injury by frost will not be sent until such danger is over. Included in this class are some of our most showy garden flowers and their culture is very easy. In the spring, after danger from frost is over, plant in a rich, loamy soil, having a sunny position and flowers the same season are assured.

Begonia

Tuberous Rooted. The tubers which we offer are of the very best quality and with proper care will give a beautiful display early in the summer. For growing in pots or boxes in the outdoors, select a shady, moist situation making the rock with thoroughly rotted manure and leaf mold, if obtainable. Plant as soon as danger from frost in over. After the plants start into vigorous growth

After the plants start into vigorous growth keep well watered.

Caladium Esculentum Known also as Elephant's Ears. One of the pen air in the north. It can be made to produce three to ten leaves three to four feet long and nearly as wide, on stalks four to six feet high. The soil best suited to Caladiums is a mixture of fibrous loam, leaf mold, peat and well rotted cow or sheep manure in equal parts, with a sprinkling of sand added. The tubers should be potted at first in small pots and shifted into larger pots as they resmall pots and shifted into larger pots as they resand added. The tubers should be potted at hist in small pots and shifted into larger pots as they re-quire it. But little water must be given to the roots till active growth commences, when, as the plants develop, they require an abundance. Humidity and warmth are necessary for their best develop-ment, but they should be shaded from the bright sunlight.

First Size Bulbs, nine inches and over in circumference. Each 35c; doz. \$3.50

Second Size Bulbs, seven to nine inches in circumference. Each 30c; doz. \$3.00

Third Size Bulbs, under seven inches in circumference. Each 15c; doz. \$1.50

The flowers are so symmetrical and perfect and the range of colors so large and varied, that they will always be popular where display is wanted. The roots are tender and easily injured by frost; they should be set out three feet apart, after all danger of frost is over and during winter placed in a cool cellar but not allowed to freeze. The plants should be supported by tying to stakes. The varieties we offer have been very carefully selected; all possess qualities of highest excellence.

Apple Blossom. Shades of red, pink and white; very attrac-

Apple Blossom. Shades of red, pink and wine; very attractive. Each 15c; doz. \$1.50
Black Prince. Very large, deep maroon; one of the choicest decorative dahlias. Each 15c; doz. \$1.50
Blue Oban. One of the choicest decorative varieties, very large, nearest to a blue dahlia. Each 25c; doz. \$2.50
Clifford W. Bruton. Hardy and vigorous; a clear brilliant, pure yellow. Each 20c; doz. \$2.00

CALADIUM ESCULENTUM

Cuban Giant (Giant) Dark, glowing crimson, shaded ma-

Cuban Giant (Giant) Dark, glowing crimson, snaed maroon; flowers of immense size. Each 35c; doz. \$3.50

Eloise (Fancy) Ground color blush pink shading to white; petals margined deep crimson. Each 20c; doz. \$2.00

Gabriel (Cactus) Striking shades of searlet and cinnamon; long twisted, incurved petals give fringed appearance.

long twisted, incurved petals give iringed appearance. Each 20c; doz. \$1.75

Jenne Charmet (New) Remarkably free flowering and vigorous. Rose shaded and edged with carmine and of largest size. Each 25c; doz. \$2.50

John Elitch. Very large, of fine form, with long stems; deep crimson richly shaded. Each 20c; doz. \$2.00

Kriemhilde (Cactus) Fresh, delicate pink shading to deep rose pink. After being cut a short time petals at center shade to white: a fine contrast. Each 20c; doz. \$2.00

rose pink. After being cut a short time petals at center shade to white; a fine contrast. Each 20c; doz. \$2.00 Lyndhurst. One of the best in color; a dazzling bright scarlet. Each 20c; doz. \$2.00 Maid of Kent. Cardinal red tipped with white; variable. Each 15c; doz. \$1.50 Mrs. Roosevelt (Giant) Very double; very large, often six inches or more in diameter; color, a delicate shade of soft pink. Excellent for cutting. Each 25c; doz. \$2.50 Pink Dandy (Show) The finest clear pink. Strong, vigorous; long stems; valuable for cutting. Each 25c; doz. \$2.50 Storm King (Show) Extra early, clear white, branching; excellent for cutting. Each 20c; doz. \$1.75 Twentieth Century (Single) Flowers very large: of perfect form and strikingly beautiful; intense rosy crimson with white tips and white disc around yellow center. Each 20c; doz. \$2.00

Dielytra (Bleeding Heart) A hardy perennial plant, with finely cut foliage, blooming in the spring. The flowers are graceful, heart-shaped, pink and white, and are borne in long racemes. Each 15c; doz. \$1.50

No flower has gained more rapidly in public favor than the Gladiolus; this could not well be otherwise, for in addition to the great intrinsic merit of the flower, it is easy of cultivation and blooms the first season. Gladioli thrive in almost any good soil except a stiff clay, require full sunlight and are liable to injury only from rank manure. Plant the bulbs six to nine inches apant, the large ones four inches and the small ones two inches deep. Make an early planting of the smallest bulbs first as soon as the ground is sufficiently dry and warm. Continue to plant at intervals of two weeks during the spring and early summer; in this way a succession of bloom may be had from mid summer until frost. In autumn, before freezing, they should be dug up and the tops allowed to dry down, after which the dry tops, earth and old bulbs can be removed. Store in a cool, dry place, secure from frost until spring.

#### GIANT FLOWERED VARIETIES

A class of hybrids between Gladiolus Gandevensis and Gladiolus Saundersoni which for varied and exquisite beauty has never been equaled. The flowers are of gigantic size, frequently eight inches across, borne on spikes four to five feet high, the upper two feet covered with flowers.

America. Very light pink, exquisitely tinted with lavender. Unsurpassed in freedom of bloom and size of flower spike. A magnificent variety. Each 15c; doz. \$1.25

George Paul. Large flowers, deep crimson, slightly stained yellow, spotted with purple.

Each 10c; doz. \$1.00

Jane Diculatoy. Flowers creamy white, lower petals stained maroon. Exceptionally fine.

Each 15c; doz. \$1.50

Mrs. Beecher. Beautiful, deep rosy crimson.
Large well opened flower with pure white
throat, freely marked and spotted. Each 10c; doz. \$1.00 Senator Volland. Large flowers, pure blue, dark

violet blotch with a yellow stain, striped blue. Each 15c; doz. \$1.50 William Falconer. Spike of great length and flowers of enormous size. Beautiful clear light pink. Each 10c; doz. \$1.00 Giant Flowered, fine mixed. Each 6c; doz. 60c.

## CHOICE NAMED VARIETIES

These named varieties are selected with special reference to beauty of flower, range of color and habit of plant.

Augusta. Pure white, with blue anthers.

Each 6c; doz. 60c. renchlevensis. Rich, brilliant, dark scarlet. Each 6c; aoz. Rich, briman, Each 5c; doz. 35c. Each 5c; doz. 35c. Clear lilac, stained pale violet 10c; doz. \$1.00

Each 5c; doz. 35c.

Barron Staffe. Clear lilac, stained pale violet and yellow. Each 10c; doz. \$1.00

Ceres. White, spotted rose. Each 5c; doz. 35c. Eugene Scribe. Flowers very large and wide, perfect, tender rose, blazed with carminate red; beautiful. Each 10c; doz. \$1.00

Gil Blas. Early flowering plant of dwarf habit; flowers salmony rose with a fire-red blotch on straw colored ground. Fach 10c; doz. \$1.00

nowers samony rose with a nie-red doz. \$1.00 straw colored ground. Each 10c; doz. \$1.00 "1900." Good sized bloom of rich red, with prominent white spots on the three lower petals. Each 6c; doz. 60c.

Madam Monneret. Bright, clear pink. Each 5c;

Madam Monnerer. Bright, telear plins. Each 5c; doz. 40c.
May. A lovely pure white flower, finely flaked with bright, rosy crimson, superb spike. Each 5c; doz. 50c.
Reine Blanche. Pure white, dark carmine blotch.

Each 10c; doz. 90c.

Shakespeare. White, blazed with rosy-carmine, large rose-colored stain. Each 10c; doz. \$1.00

#### **BUTTERFLY VARIETIES**

Lemoine's Large Stained

A distinct race of this matchless class of plants, characterized by the variety and strength of color of its flowers.

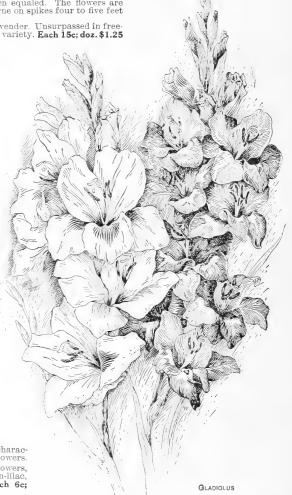

Marie Lemoine. Slender spike, well expanded flowers, upper division of a pale creamy color, flushed salmon-lilac, the lower division spotted violet and yellow. Each 6c; doz. 60c; per 100 \$3.00

Lemoine's Butterfly Varieties Mixed. Throats very distinctly marked. Each 3c; doz. 25c; per 100 \$1.75

The 100 rate is by express at purchaser's expense.

## GLADIOLUS MIXTURES

These choice assortments must not be confounded with the common mixed sorts. We recommend this stock with perfect confidence, as it is composed only of choice varieties and purchasers can depend upon having a magnificent variety of colors. Single and dozen prices include postage. The 100 rate is by express at purchaser's expense.

## MADEIRA VINE

Tuberous rooted climber with glossy green leaves and delightfully fragrant, white blossoms. Sometimes called Mignonette Vine. It is of rapid growth, and from a few tubers vines will be produced sufficient to cover one side of a cottage in a single season. The tubers are tender and must be protected from frost during winter. Each 5c; doz. 50c.

## TRITOMA

Sometimes called Red Hot Poker. The handsome flowers sometimes called Red Hot Poker. The handsome howers are produced in large spikes of rich orange-red tinted flower tubes. Plant two feet apart. Tritomas are hardy south of Cincinnati when well covered in winter. In the north, dig up the plants in November, place in boxes with dry earth and store in a cellar. In spring place in a warm, sheltered, well drained spot, preferably with a background of shrublery. Fabl. 15cd. \$1.50 bery. Each 15c; doz. \$1.50

Lilies have always been regarded as among the most beautiful of garden plants. Of queenly beauty, faultless purity and stately form, too much cannot be said in their praise form, too much cannot be said in their praise popularity from year to year. Nearly every variety will, with a little care, endure the severity of our winters and many are among the most hardy of our garden flowers.

Bulbs should be planted as soon as the frost is out of the ground; the earlier the better. Select a well drained spot, dig the soil deep and make it fine, enriching it abundantly with well rotted cow manure, adding a liberal mixture of sand. Set the bulbs from three to five inches deep according to size. During the winter it is advisable to cover the surface of the bed with a thin layer of manure which will afford a slight protection to the bulbs and also materially enrich the soil. In spring the manure may be removed or dug in between the rows. Care should be taken that they have proper drainage, no water being allowed to stand around the roots. Once firmly established, they should not be disturbed oftener than once in five years. To produce extra fine specimens, plant bulbs in pots early in spring and grow them in the house or under glass. or under glass.

Lilium Auratum
The glorious, gold-banded lily of Japan and one of the most superb plants in cultivation. Its immense, ivory-white flowers are thickly studded with yellow and crimson spots, while in the center of each

petal is a gold-en band, fading atits edges into choice bulbs as we offer, if well cared for will give from five to ten magnifi-cent flowers the first year and under good cultivation will, after becoming well es-tablished, give from ten to fifty. 20c. each; \$2.00 per doz.

LILIUM AURATUM

Lilium Speciosum Album
center of each petal. They are of great substance and very fragrant.
One of the best for general culture. 25c. each; \$2.00 per doz.

Lilium Speciosum Rubrum No words can overstate these famous Japanese Lilies. The six broad, white or pink petals are thickly dotted with rose or crimson spots and the graceful form and brilliant color make them very effective and desirable. Especially thrifty and hardy. One of the best for garden culture. 20c. each; \$2.00 per doz.

Jacobean Lily (Amaryllis formosissima) Each of the five narrow petals of this flower is three to four inches long and a very intense, rich scarlet color of unequalled brilliancy, vividness and purity. The plants are readily grown and although the bulbs are not hardy they can be easily preserved during the winter in a dry cellar and planted in the open ground in the spring. They may be grown in winter like hyacinths. 10c. each; \$1.00 per doz.

Lilium Tigrinum Splendens (Improved Single Tiger flowers of excellent form; color orange-salmon with dark spots. 12c. each; \$1.25 per doz.

Lilium Tigrinum Flore Pleno (Double Tiger Lily)

Illy is of stately habit, bearing clusters of very large, double flowers on tall, strong stems: color bright orange-red spotted with black.

12c. each; \$1.25 per doz.

Lilium Longiflorum

A very uniform and exceptionally heat plant. Comes readily into bloom for Memorial Day, being a little later forcing variety than Lilium Harrisii and preferred by some to that, since the flowers are of better substance. Extensively used by florists for cut flowers. When grown in the open ground it blooms in June or July. The pure white flowers resemble the well known Bermuda Easter Lily. 12c. each; \$1.25 per doz.

TUBEROSE

Tuberose

The flowers of this popular plant are waxy-white, double and exceedingly fragrant. They are useful in buttonhole bouquets, in large bouquets, or as single specimens. A good way to grow Tuberoses is to fill five-inch pots half full of well rotted cow manure and the remainder with good, rich, sandy soil. Plant the bulbs in this in April, water moderately out of doors. They will usually flower before cold weather; if they do not, the pots can be brought in and bulbs will

out of doors. They bloom in the house.

Double Dwarf Pearl, extra large bulbs, 4c. Each; 40c. per doz; \$2.00 per 100. We will supply second size bulbs 3 for 10 cents, 25 cents per dozen. The 100 rates are by express at purchaser's expense.

About September First next we will issue our Annual Catalogue of CHOICE DUTCH BULBS AND SEEDS FOR FALL PLANTING. It will be sent free to all customers without ordering it, and to others who apply for it.

#### The Iron King Seed Drill. \$7.00

With Fertilizer Attachment \$9.00

Sows all kinds of garden seed in an exact line, so that the cultivator can be worked close up to the row while the plants are small and therefore is especially adapted to sowing onion seed. Two patent agitators go with each machine, which are easily adjusted and act as force feeds, thus insuring an even and continuous flow. It has interchangeable hoppers for distributing fertilizers and by simply changing hoppers can be converted from a seed to a fertilizer drill.

Hazeltine Hand Weeder and Scraper Price 25cts., Postpaid.

The Christy Garden Weeder Price 25cts., Postpaid.

Never-Break Solid Forged Steel Garden Trowel
